OU School of Nursing now offers a fast track option for nurses who want to complete a BSN deg

Nurses with an Associate Degree and a valid nursing license can now complete their Bachelor of Science in Nursing (BSN) degree at the Oakland University School of Nursing (SON) in as few as 16 months.

The SON is initiating a Fast Track option for students who enroll in the BSN degree completion sequence starting in Fall 2016. The Fast Track courses are seven weeks (versus the traditional 14 weeks), which allows students to complete four courses per semester. All of the required courses in the Fast Track option are 100% fully online.

A BSN degree can increase a nurse's earning potential, it can open up doors to better job opportunities, and the BSN degree provides the foundation needed for continued nursing education at the graduate level (e.g. nurse anesthetist, nurse practitioner). Scholarships and financial aid are available for eligible applicants.

The SON still offers the traditional BSN completion sequence for nurses with an Associate Degree who wish to complete a BSN degree, but at a pace that is not quite as fast. For additional information about either BSN degree completion sequence, please contact Patrina Carper, Oakland University, 248-370-4253 or visit www.oakland.edu/nursing
