Your Feedback Is Important - Click Here To Complete Childcare Survey

CHILDCARE SURVEY

Childcare and Children with Autism

Parents frequently face obstacles trying to locate safe and nurturing childcare. For families of children with autism, these obstacles can be numerous and especially challenging. As the number of young children with autism continues to increase, it is critical for early childhood educators to understand the childcare needs of these families. You can help! If you live in Michigan, have a child with an autism spectrum disorder, and need or use childcare, you are invited to complete this survey. Your assistance will help early childhood educators understand the childcare experiences of families with young children with autism. Your participation will also help identify ways that schools, agencies, and educators can be supportive to the childcare needs of these families and their children.

The survey should take approximately 20 minutes to complete. If you would like to complete the survey, please click on the link below.
