Grizz Facts: A look at time to degree trends

The mean amount of time that OU's traditional undergraduate students require to complete their degrees has declined in recent years, while the median time has remained stable for the past three years. Given that the difference between mean and median times is narrowing, it is clear that fewer students are taking many years to complete their degrees. Because OU's mean amount of time to degree is approaching four years, it is not expected to continue declining at the rate observed over the past 10 years.
