

Whirlybird Replaces Crane

SPIRE FROM THE SKY — A helicopter holds the third of five spire sections steady while workmen fasten it in place on top of the Kirk-in-the-Hills Church tower, 150 feet above ground. The unique use of the whirlybird in high construction projects succeeded this morning after a previous attempt last week failed.

Helicopter Places Spire on Top of Church Tower

Huddled in small groups, a handful of workmen, reporters and photographers saw history made this morning in the construction industry when a helicopter placed a 330 pound steel spire section on a church tower.

The six-foot long tube dropped squarely into place atop the tower of the Kirk-in-the-Hills Presbyterian Church, 1540 W. Long Lake Rd., Bloomfield Township. It was quickly secured by workmen.

Two attempts were needed early this morning before the first of five sections was successfully installed in what is believed to be the first use of the helicopter to replace giant cranes in building.

First attempts to install the heavy sections failed last Saturday when high winds caused the section to sway dangerously.

This morning, with little wind and a steady drizzle falling, the Bell 'copter took off at 7:15. The two heaviest of the three sections had been cut in half previously so it carried a shorter and lighter load than last week.

The whirling blades lifted the spire base directly over the church tower, some 150 feet up, but a failure in radio communications caused the maneuver to miscarry.

But 10 minutes later, the second try succeeded and a cheer went up from the drenched crowd.

The accomplishment vindicated the faith of the Acron Iron Works, Inc., of Detroit, which agreed to pioneer the project when it found the huge cranes necessary for the job were too heavy for the local roads.

Nathaniel O. Sautter, vice president of Acron, first conceived the idea of using a helicopter and, he says, never lost faith even when first attempts failed.

"It just had to work," he commented, "the idea was so simple."

Kirk-in-the-Hills is a Gothic church, patterned after the historic Melrose Abbey in Scotland. Due for completion by Christmas, its total cost will run over \$4 million.

The spire point will rise some 200 feet above ground and will be covered with gold sheet.

But Man Still Drives After Injury Left Arm Almost Cut Off

A Rochester man who drove his car for a quarter mile with his left arm almost severed at the elbow is given a good chance by doctors today of retaining the limb.

John Salo Jr., 29, of 3070 Melvin, was driving in a drunken state at 2:25 p.m. yesterday when he sideswiped a dump truck on Dequindre Rd., a quarter mile south of 13 Mile Rd., according to Capt. Robert E. Richardson, of the Madison Heights police.

His arm was cut the window when he hit the truck, nearly severing it. He had previously forced three cars off the road before encountering the truck, Richardson said.

With his arm held to his body by only an inch of flesh, Salo drove on until he put his auto into a skid and came to a stop against a traffic speed sign on the wrong side of the road, the captain added.

Madison Heights police rushed Salo to Van Dyke Memorial hospital where his condition is reported fair today.

"If he hadn't drunk so heavily during the previous six hours, he probably would have died of shock," Richardson said. "He was conscious all the while."

New County Road Boss to Take Over Next Week

Oakland County's new highway engineer will take over his job as engineer-manager of the Oakland County Road Commission Thursday, commission chairman Sol D. Lomerson announced today.

Paul VanRoekel, appointed two months ago, is replacing Leon V. Belknap, who is retiring after 40 years service.

Belknap will be retained as a consultant, Lomerson said.

VanRoekel, 32, formerly was highway engineer for Howard County, Iowa. Born and educated in that state, he is a graduate engineer of Iowa State College.

During World War II, VanRoekel was an Army Air Corps navigator in Europe. He and his wife plan to live with their three sons at 1863 Warwick Blvd., Sylvan Lake.

The former officer of the Iowa County Engineers Assn. was selected from among 24 applicants for the job, Lomerson said. The beginning salary is \$12,500.

Belknap, 66, joined the commission as manager in 1916. He is one of the oldest county highway managers in the state, in terms of service.

He has been president of the County Road Commission of Michigan, president of the County Road Division of the American Road Building Assn. and president of the Pontiac Kiwanis Club.

PAUL VANROEKEL

Women's Clubs Favor Bonds

Back May 20 Passage of Six-Proposition Ballot on Hospital, Sewage

The Pontiac City Federation of Women's Clubs this week joined the growing list of organizations to favor passage May 20 of a \$1,850,000 city hospital bond issue.

The club, established back in 1913, represents 22 women's clubs in the Pontiac area with a membership of more than 1,000, according to Mrs. Socrates V. Sekles, federation president.

Mrs. Sekles said a resolution endorsing the hospital question was passed by the 20 clubs represented at an annual dinner meeting.

She said although the resolution was limited to the hospital issues on the May ballot, club members expressed a desire that voters would approve the entire six-proposition ballot.

BOND QUESTION

Besides the hospital issue, there will be a \$2,700,000 bond question aimed at the enlarging, improving, and extending Pontiac's sewage disposal system.

Speaking about the need of completing Pontiac General Hospital, Mrs. Sekles said: "We all felt that the building cannot be of any value to the city if we don't provide the money to finish the project."

A Volunteer Hospital Committee, working for the public acceptance of completing the job, has received similar endorsements from 10 other organizations.

Michigan Polio Count Called 'Encouraging'

LANSING (AP)—First reports on the infantile paralysis count in Michigan "look very encouraging," the State Health Department said today.

Dr. F. S. Leeder, head of the department's Bureau of Disease Control, said that only 23 cases of polio have been reported in Michigan so far this year. This compares with 32 cases during the same period last year and 46 in 1955.

Hoffa's Attempt to Get Charges Dismissed Fails

Teamsters Boss Wins Brief Delay of Trial Now Set for June 17

WASHINGTON (AP)—Jimmy Hoffa, Teamster Union boss in the Midwest, has failed in an effort to get dismissal of an indictment accusing him of bribery and conspiracy.

But he and his co-defendant, lawyer Hyman I. Fischbach, won a brief delay in their trial on charges growing out of an alleged attempt to plant a spy on the staff of the Senate Rackets Committee.

At the end of day-long arguments, Federal District Judge Burnita S. Matthews yesterday rejected a variety of defense motions, including one asking dismissal of the indictment.

Instead of the six-month continuance sought, the judge set the trial for June 17. It had been scheduled for May 27.

The defense lawyers, Edward Bennett Williams for Hoffa and Daniel B. Maher for Fischbach, contended government officials had "generated" a such widespread publicity of the case that Hoffa and Fischbach could not obtain a fair trial now or in the near future.

In continuing the trial to June 17, Judge Matthews said her action was "without prejudice" to new motions for a further delay if the questioning of prospective jurors indicated an impartial jury could not be seated to hear the case.

Hoffa, a Teamsters vice president, and Fischbach, Miami attorney, are accused of conspiring and bribing John C. Cheasty to get a job with the Senate Rackets Committee and keep them posted on its secrets.

The indictment alleged Hoffa paid Cheasty \$3,000 and got some committee documents from him.

But according to Committee Chairman McClellan (D-Ark) and the FBI, Cheasty merely pretended to go along with the scheme while working in close cooperation with authorities.

President Slates Budget Address Tuesday Evening

WASHINGTON (AP)—President Eisenhower will make a nationwide radio-TV address Tuesday night in support of his \$71,900,000 spending budget.

White House Press Secretary James C. Hagerty said Eisenhower's 30-minute speech will be carried "live" beginning at 8 p.m. (EST) by NBC-TV and radio, Mutual radio, ABC radio and CBS radio.

He said delayed broadcasts will be made by ABC-TV at 9 p.m. that night and by CBS-TV 10:15 p.m.

Eisenhower plans another nationwide radio-TV talk sometime during the week of May 19, on the subject of foreign aid.

Open House Spotlights Needed Improvements

Public to View Facilities of Children's Home

Open house at the Oakland County Children's Home Sunday will spotlight what has been done to relieve crowding.

It also will underscore what is still to be done.

Recent, if partially temporary, action by the Board of Supervisors has relieved the pressure somewhat.

But the home still is operating at more than one and a half the capacity for which it was built in 1929.

In space designed for 90-95 youngsters, there averaged 150-160 recently.

DORMITORIES CROWDED

As a result, dormitories are crowded, beds have lined the halls, and classroom activity has been seriously curtailed.

Crowding causes a big problem, especially for the highly emotional youngsters who generally make up the home's ever-shifting population.

Youngsters worlds apart in psychological outlook are, unfortunately, mixed together.

There are the over-wrought children that are classified as neglect or dependent cases. They come to the home through no fault of their own and stay a few days or a matter of months. Their parents may be dead or their own homes broken.

Lack of space means these children of school age must attend classes with others who have records of delinquency.

REHABILITATION PROGRAM

Most of the delinquent children are on an open program designed for rehabilitation. It takes up to six months.

A third group are the delinquents recently in trouble. They generally are segregated from the others. Nevertheless, the sight of a delinquent youth in semi-prison garb working about the home is a constant reminder to others.

A reminder of a troubled heart, of rebellion against authority, of torment sometimes or of wretchedness.

Officials agree that on an adult level, persons dependent or detained by society would not be jumbled together in this fashion.

The home's superintendent, W. O. Moulton Jr., points to the facilities and finances available to the home. He's proud of the home's record in the face of limitations.

"We've done well with what we have, although we could do better with more," he said.

Then pausing soberly, Moulton added, "It's the child who suffers, though."

RELIEVE CROWDING

As a first step to relieve crowding, the county last year built two cottages next to the home. Dependent and neglected children eat and sleep there.

The county has authorized changeover of storage space in the nearby welfare building to classrooms. It is hoped that forms

Pontiac Students at Lincoln Memorial

PLACE FLORAL TRIBUTE — A group of students from Lincoln Junior High School pose with the wreath they placed in Lincoln Memorial Friday in honor of Abraham Lincoln. Left to right are: Sharon Nichols, Linda Tabor, Boyd Ferguson, Tom Devaney and Mary Pike, all school officers at the school. Students from Washington and Madison Junior High Schools also have been in the capital during the past few days.

Candidates File Waterford, Pontiac School Races Seen

A number of last minute filings, complicated the school board races in Pontiac and Waterford Township late yesterday.

Four candidates will make the race for the two Pontiac seats and eight are bidding for the two Waterford school posts. The deadline for filing is 5 p.m. today.

In Pontiac the candidates for the June 10 election are incumbents Louis H. Schimmel and Robert B. Oliver and newcomers Lloyd R. Ludy, 2299 Opdyke Rd., and William H. Anderson, 919 Spence St.

The Waterford candidates will be: Mrs. Elizabeth S. Adams, board president, and Barbara Ingelhart, 1312 Hospital Rd.; Charles W. Walters, 6020 Southward Dr.; Lester K. Carlson, 4131 Grayton St.; Willard V. Johnson, 474 Shore View Dr.; Frank R. Rudloff Jr., 3615 Brookdale Lane; Jerome K. Barry Jr., 2247 Kohler; and Richard D. Kuhn, 2295 Lake Angelus Rd.

Pontiac board members serve four years on a seven man board. Waterford has a five man board with three year terms.

While nominating petitions can be filed today, both school board offices are closed and school records would have to be located at home to accept the petitions.

May 31, at 5 p.m., is the last date for voters to register for the school elections. Registration should be made with the city clerk in Pontiac, or the township clerk in Waterford.

Rain to End Tonight; Mercury to Dip to 40

The weather man has reported that today's occasional rain and drizzle will end tonight, with the mercury dipping to a low of 40 to 44 degrees.

Tomorrow will be partly cloudy and a little warmer, high 62 to 65. Showers are likely in the evening, low 42 to 46.

Downtown Pontiac's lowest temperature preceding 8 a.m. was 47. At 2 p.m. the temperature was 52.

Resident Held in Killing of Man

Suspect Admits He Shot Victim During Quarrel, Say City Police

Willie Thomas, 34, of 22 Beaudette St., will be held in the Oakland County Jail until Monday for investigation in the killing another man early this morning.

Thomas was arrested by Pontiac police about 2:45 a.m. today at his home where Austin O'Dell, 41, of the same address, was found shot in the neck and stomach with a .32 caliber revolver.

Austin was pronounced dead by Deputy Coroner Dr. Isaac C. Prevette on arrival at Pontiac General Hospital.

Police say Thomas admitted he shot O'Dell during an argument over which one would purchase some alcoholic beverages for a party.

Home Improvement Section in Press

A special section on Home Improvements is included with today's Pontiac Press. This is the beginning of National Clean-up, Paint-up, Fix-up Week. Readers will find many suggestions on how to improve their homes in a section that is easy to remove and keep for easy reference.

Senate Probers Eye 'Demands' on Fruehauf

Trailer Firm President to Testify About Events Following Aid

WASHINGTON (AP)—Senate racket probers said today they plan hearings next week on alleged "demands" by Teamsters Union President Dave Beck on an employer Beck had aided with loans from union funds.

Robert F. Kennedy, counsel for the investigating Senate committee, said Roy Fruehauf, president of the Fruehauf Trailer Co., Detroit, and later Beck himself would be quizzed on what Kennedy said were "Beck's demands on the company in the wake of the loan."

The committee previously developed testimony that Beck loaned 1½ million dollars in Teamsters funds to Fruehauf when Fruehauf faced loss of control of his firm unless he got more capital. The loans were repaid, the senators were told.

There has been testimony that later, when Beck needed money, the Fruehauf firm got a trucking firm, the Brown Equipment Co., to lend Beck \$200,000.

Kennedy indicated there were other "demands" on Fruehauf by Beck and that he intends to try to develop evidence along this line.

MASS OF EVIDENCE

The committee has gathered a growing mass of evidence alleging that the 62-year-old Teamsters boss diverted vast sums of his union's money for his personal use and profited from investing the union's multimillion dollar funds.

Mother of Year Calls Mom Home's Salvation

NEW YORK (AP)—Mrs. Hazel Hempel Abel, American mother of 1957, says the "salvation of the home is the watchfulness of the mother."

Mrs. Abel, 68, of Lincoln, Neb., yesterday was presented with a citation and a diamond-studded pin emblematic of her selection as mother of the year. She has five children.

Since the huge open pit from mines in northern Minnesota were opened in 1895, they have yielded more material than was originally excavated in building the Panama canal.

Security for You

Unemployment, SS Payments Separate

By RAY HENRY
Associated Press Writer

From F. L. of San Bernardino, Calif.: "I got into an argument the other day at work with a friend of mine over Social Security. Perhaps you can settle the argument. He said that any unemployment insurance I might collect would be deducted from my future Social Security payments. I said he was wrong. Who's right?"

You are. Unemployment insurance is a separate program.

From W. O. R. of St. Petersburg, Fla.: "I've been working and paying into Social Security since 1948. If I should quit my present job and go to work for the government which has a separate retirement system, will I ever be eligible for Social Security retirement payments?"

Yes. The length of time a person must work under Social Security to be automatically eligible for retirement payments ranges from 1 1/2 to 10 years. The actual time varies depending on the age of the person at the time of retirement. Since you've already got the maximum required under Social Security, you're sure to be eligible.

From Mrs. T. T. of Independence, Kan.: "This Social Security business is so complicated that I can't figure out some of my rights. Should I hire a lawyer to help me make out my claim?"

You can if you want, but it's the job of the Social Security offices around the country to clear up any questions. Whether you're represented by a lawyer or someone else, no fee above \$10 may be charged without government permission for any work done before your case actually reaches a court of law.

From Mrs. S. A. of Pontiac, Mich.: "If a person has paid into Social Security since it started in 1937 and he has always paid the maximum tax, what will his payments be when he retires on Jan. 1, 1958, at 65? If his wife is also 65 and she starts drawing payments, what will her checks be?"

The husband's payments will be \$108.30 a month. The wife's payments will be \$54.30 a month.

From W. F. of Newark, N. J.: "Does Social Security pay for having teeth pulled and making false teeth?"

No. Monthly payments under Social Security are based on a person's wages or income from self-employment. There are no additional payments for medical, dental or other expenses.

From E. S. C. of New Brunswick, N. J.: "I've been working in a private home doing light housekeeping and babysitting since Jan. 1. I receive \$30 a week for this work. I'd like to be under Social Security, but my employer says he doesn't have to pay Social Security tax for me unless he has six or more servants. Is this right?"

No. If you're paid \$50 or more by your employer during a calendar quarter, he must make a report and pay Social Security tax

on your earnings even if you're the only employee.

From Mrs. M. D. of Lock Haven, Pa.: "My husband is 65 and I'm 63. If he dies, can I draw monthly Social Security payments now?"

Unless you have children under 18 or a child who was disabled before reaching 18, you're not eligible for monthly payments until

you reach 65. But, you're eligible for a lump sum upon your husband's death.

(Questions on Social Security problems may be addressed to "Social Security," in care of The Pontiac Press. Questions will be answered by mail from the Pontiac office of the Social Security Administration. There is no charge for this service.)

Vertijet Doesn't Require Runway to Land, Take Off

EDWARDS AIR FORCE BASE, Calif. (INS) — The United States now has a jet plane which is able to take off and land vertically. It hovers at zero speed while easing down for a vertical landing.

However, the craft is not in production yet. It is still in the experimental stage.

The plane is the delta-shaped

X13 Vertijet produced by the Ryan Aeronautical Company.

The company announced that the revolutionary craft was put through a series of tests at the Edwards Air Force Base, north of Los Angeles, last month and successfully demonstrated that it is capable of taking off vertically, of making the transition to horizontal flight and then of vertical hovering for landing.

UNDER STUDY
The plane has been under study since 1947 and it and its experimental predecessors have cost a total of \$10,000,000.

Now, using the know-how it has gained in developing the X13, Ryan is working on the design of vertical-rising bombers and fighters for the Air Force and the Navy.

The X13 is powered by a Rolls Royce Avon engine with a 10,000 pound thrust.

The plane has no conventional landing gear. It operates from a specially-built trailer from which it takes off and lands in a vertical position and on which it is lowered to a horizontal position for towing away.

Did Da Vinci Do Painting?

Paper Says Detroit Art Institute Purchased Disputed Work

DETROIT (INS) — The Detroit Times reported today the Detroit Institute of Art has purchased a painting said to be a Da Vinci masterpiece.

The Times said the institute "probably paid in the neighborhood of \$250,000" for the painting.

The institute said yesterday it would make an announcement "of international importance to the art world" on Monday.

The Knoedler Art Gallery of New York City was named by the Times as the seller of the painting, which depicts the madonna and child. Da Vinci painted several portrayals of the mother and child.

However, the Metropolitan Museum of Art in New York, according to the Times, declared it had no knowledge of the painting.

E. Coe Kerr Jr., president of Knoedler, was quoted by the Times as saying six world experts have pronounced the portrait an authentic Da Vinci.

But Kerr was also said to have stated:

"All we can do is go by the usual landmarks such as technique, materials used, and the obvious age of the painting."

"The major doubt," the Times said, "seems to center on whether the painting actually was done by Da Vinci or by one of the many young talented Italian artists who flocked to him to learn how to paint."

One prominent New York critic, the paper stated, has challenged the originality of the work.

The institute made no immediate comment about the report.

\$2 Million Estate Willed to 6 Children

DETROIT (INS) — The will of Mrs. Inez T. Chapin, which was admitted to probate Thursday, provides six equal trust funds out of an estimated estate of two million dollars for three daughters and three sons.

The widow of Roy D. Chapin, former president of the Hudson Motor Car Co., died April 19 at 66. The children sharing in the estate are Roy D. Jr. and John C. of Grosse Pointe Farms; Daniel, of Cincinnati, Ohio; Mrs. Hugo Higbee of Detroit; Joan C. Hutton of Long Island, N. Y., and Sarah, of Grosse Pointe Farms.

Mrs. Chapin willed \$10,000 to establish the R. D. Chapin scholarship fund at the University of Michigan for deserving students in highway and transport engineering.

The Roy D. Chapin foundation was given the Chapin mansion in Grosse Pointe Farms.

The glue that sticks U.S. postage stamps is of a hybrid corn and caseva mixture, slightly nutritious.

TODAY'S ASSIGNMENT FOR

JUNIOR EDITORS

ATTACH BUNNY'S EARS BEHIND HEAD, THROUGH HOLES MARKED X

BACK VIEW OF BUNNY

TOY BANKS — 4. The Flop-Eared Rabbit

The wonderful old mechanical banks that performed antics when fed a penny have virtually disappeared.

There was the hunter who shot at a bull's eye — and always hit it; the cow that kicked over the milk pail; the dog that rang a bell, all when you dropped a penny into the bank. Plentiful as such devices were for many years, they're rarities now, prized by collectors who sometimes pay large prices for them.

Here's another favorite. Rabbits have long twitchy ears, and the designers of mechanical toy banks seized on this fact in devising their banks.

Color the picture before pasting it on cardboard. Put a small box behind the base as shown on the little drawing. Follow the directions indicated, cut the slit at the top of bunny's back. Then drop a penny into the box and swing up the ears that show bunny likes pennies almost as much as lettuce.

(Frances McGuckin, Oakland, Calif., won \$10 with this suggestion. Send your ideas in care of this newspaper. Violet Moore Higgins, AP Newsfeatures.)

Next Week: The Junior Editor Circus Comes to Town

Ward's Sees Hike in Auto Production

DETROIT (INS) — Motor vehicle production in U. S. factories this week should total 126,421 cars and 23,168 trucks, Ward's Automotive Reports said today.

Last week 119,999 cars and 23,849 trucks were built compared with 105,552 cars and 22,121 trucks in the like week last year. Ward's places the year's total to date at 2,536,907 cars and 417,903 trucks, compared with 2,487,348 cars and 432,298 trucks in comparable 1956.

The indicated boost this week in car output is attributed to an upturn in Chrysler production, despite some labor problems. Some Chrysler plants scheduled Saturday operations.

Canadian output this week is placed at 9,153 cars and 1,920 trucks compared with 10,038 cars and 2,026 trucks last week and 11,033 cars and 2,705 trucks in the like 1956 week.

Will Churchill Retire?

LONDON (INS) — The Daily Herald said that Sir Winston Churchill plans to retire from the House of Commons at the end of the present Parliament, which has another three years to run. By then Churchill will be 85.

SATURDAY, MAY 11, 1937

Golden Jubilee of Mothers Day

First suggested by Miss ANNA JARVIS of Philadelphia in 1907, as a day honoring her mother, the observance of Mothers Day has become nationwide, and even extends to foreign countries. And next Sunday marks its golden jubilee.

Miss JARVIS got behind her movement in a big way. She enlisted the help of the newspapers, and sent out thousands of letters to influential people.

The response was so favorable that on Sunday, May 9, 1907, it was decreed that the second Monday in May of each year should be set aside as an occasion to honor all mothers.

Her home city of Philadelphia was first to give it an official status. Other large cities and some states soon after followed suit.

On May 10, 1913, both the Senate and House of Representatives at Washington passed resolutions in the same accord. The wording stated that it was to be an occasion "dedicated to the honor of the best mother in the world, your mother."

Now the day is generally observed in all churches, regardless of denomination, and on the Friday before in the schools with appropriate exercises.

Without any official status, through the years the symbol of the day has become the wearing of a white carnation if your mother is deceased, and a colored one if she is living. In many states a display of the flag is the rule, both in homes and at business places.

Following the American custom, Mothers Day has become somewhat commercialized in recent years. Perhaps that's a good thing, for many of us are at a loss as to what to give our mother, whom we may think "has everything."

Perhaps there are others who have a feeling that mother would think of us as harboring a guilty conscience if we suddenly remember her on a special occasion, and quite ignore her the rest of the year.

The whole spirit of the day in its proper intention is best summed up in an extract from one of the letters sent out by Miss JARVIS: "We should make it a day when we treat mother in the same loyal and affectionate manner that deep down in our hearts we know she should have on every other day in the year."

Benson Speaks Out on Farm Legislation

It won't be Secretary of Agriculture BENSON's fault if the American people don't have a better understanding of the country's farm problems.

In a recent talk, Mr. BENSON discussed a number of widely believed things about agriculture which just aren't so. One of these is "that output can be controlled through acreage allotments."

He said that if we lived in a world where politics didn't exist "it might be possible to work out regulations that would really be stiff enough to control output."

But the evidence of 25 years in that the farmers do not want them and the Executive Branch, as a practical matter, cannot enforce them."

The Secretary says that price supports are still too high and too inflexible and that the cost to the taxpayers has been \$11.7 billion in that time. He believes these have been of little or no help to the problem of low income farmers in whose name farm programs are frequently defended.

Mr. BENSON argues that price supports have helped the politically powerful and generally well-to-do producers of a small number of favored crops. They even have been encouraged to produce for sale not to the market but to the Government.

In a letter to Sen. ALLEN J. ELLENBER, Louisiana Democrat, chairman of the Agriculture Committee, Mr. BENSON points out that present farm programs and policies aren't working out and cost too much. The Democratic price support and acreage allotment programs, he says, do not cut farm production enough and do not raise farm prices.

The GOP surplus disposal and soil bank plans, he admits, are the most expensive farm programs ever written and they haven't done what they were supposed to do. Mr. BENSON feels that the soil bank plan should be allowed to expire in 1939 and that price supports should be made more flexible.

The Secretary thinks the correction of this situation should be dealt with as an economic problem and not as a political issue. It can be hoped that Secretary BENSON's frank, non-partisan and informed views will be given serious consideration by Congress.

The People's Business

Irony of Politics

Governor Hurts Dems by Insisting Upon Election

By ROGER LANE
LANSING — The ways of politics are strange, and sometimes ironic.

Consider the case of Gov. Williams and the State Senate vacancy left by the death of the late Sen. Harry F. Hittle, Lansing Republican.

Hittle's death reduced the Republican majority over Democrats to 22 to 11.

Because there are 34 Senate seats, Republicans were left one shy of the two-thirds vote required to carry various motions and to approve a proposed constitutional amendment.

By being dilatory and putting off a special election to fill the vacant Hittle seat, Williams could have preserved the relative Democratic advantage.

There were some in Democratic ranks who thought it would be a good idea. But not Williams.

CALLED ELECTION.

He promptly called a special election for April 1, the date of the statewide spring election, to choose a successor to Hittle. He must have known the odds were heavy that the successor would be a Republican.

As a result, Paul Younger, former Ingham County prosecutor and a Republican, was sworn as the new senator last month.

Strangely, the Democratic governor's decision to hold a speedy special election played a storm of protest, Republican County officials and a Republican legislator joined in.

His call jammed up the spring election calendar, and threatened to disenfranchise absentee voters, they said.

The challenge went to the Supreme Court before it was finally dropped.

This week, it was by Younger's vote that Republicans in the Senate pulled a piece of Democratic strategy to put at rest a move by some Republicans to prolong the legislative session.

DEPRIVES WILLIAMS

If the Republicans went ahead with a plan advocated by seven of their number to recess the session, rather than adjourn it, according to the timetable already approved, the Democrats saw that this would deprive Williams of the chance, should he see fit this summer or fall, to summon the legislators into extraordinary session.

His tactic on Tuesday, therefore, was to withhold support from motions to give "immediate effect" to bills as they are passed, that is, provided that they should become law as soon as signed by the governor.

Tribute to a Vigilante

Days of All Faiths:

Churches Emphasize Family Unit

By DR. HOWARD V. HARPER

Sunday in the national calendar of the United States is Mothers Day, officially proclaimed each year. The day is also celebrated in Canada and Mexico, and a few other countries, but without governmental sponsorship.

To the member denominations of the National Council of Churches, however, the emphasis will be on the whole family, not on Mother alone. The past week has been observed as National Family Week. Sunday the week is brought to its climax in the Festival of the Christian Home. Mothers will, of course, be honored, but the real point of the day is not just to pay a sentimental tribute. The idea is rather to focus attention on the joint responsibility of church and home to maintain the spiritual health and welfare of the entire family.

This displacement of Mother as the chief feature of the day is not something forced by clergy and church authorities. It was the women's own idea. The Festival of the Christian Home is sponsored by United Church Women.

AMERICA'S BIRTHDAY
The Jamestown Festival, which began at Jamestown, Va., in April and will continue through November, is popularly called the celebration of the 350th birthday of America, because it commemorates the establishment, in 1607, of the first permanent community on this continent. The focal point of the eight-month observance is, of course, the anniversary of the actual landing, and that anniversary is Monday.

It is impossible to examine the details of this historic event without seeing that its religious significance far outweighs the political importance that will be stressed throughout the festival.

For here, 13 years before the Pilgrims came to New England seeking religious liberty, there landed three boatloads of British pioneers whose stated purpose was "... the glory of God and the propagation of the Christian faith among them that sit in darkness."

These first American settlers were staunch and satisfied members of the Church of England. They were not rebelling against or fleeing from any worldly or ecclesiastical tyranny at home. They were missionaries, bringing their traditional faith to the people of the unexplored new continent. Their intention is clearly seen in their first act on reaching the

THOUGHTS FOR TODAY

The great God that formed all things both rewardeth the fool, and rewardeth transgressors. — Proverbs 12:14

Kings and their subjects, masters and slaves, find a common level in two places—at the foot of the cross, and in the grave. — Colton

"Let me track in over the home in a instant ago."

shore: the planting of a cross on the beach.

Because these people were members of the Church of England, the Jamestown Festival is a matter of particular interest and pride to Episcopalians, who see their own historic roots in this first planting of organized religion in the New World. The Archbishop of Canterbury, and the Presiding Bishop of the Episcopal Church, representing the "mother" and "daughter" churches, were at Jamestown to take part in the official opening of the Festival.

On June 16 the Bishop of London will be there to commemorate the first service of Holy Communion ever conducted on this continent. And sometime during the summer some mem-

ber of the British royal family will be present, representing the Queen, who is the secular head of the Church of England.

The vast political consequences of the Jamestown landing should by no means be minimized, but in those times church and state were not separated as they are in America today, and the ecclesiastical and political history of Jamestown cannot be considered as two distinct streams.

The pattern is not familiar to us in these times, but our pattern would have been just as strange to the Jamestown colonists. It was quite natural that when, in 1619, the New World's first legislative assembly met, the meeting place was Jamestown church.

(Copyright 1937)

Dr. William Brady's Mailbag:

How to Spot Reputable Specialist

"I see you are still against clinics — of course I mean reputable ones, not quack concerns. You never seem to distinguish between them when you condemn clinics and specialists." (Mrs. O. L. E.)

Ans. — Consult Webster for definition of clinic. I'm against only the phony "clinic." If your family physician refers you to, or approves a specialist you select, that is my idea of specialization.

DR. BRADY I'm against only the trick "specialists" who are converting practice into a business.

"Had skin trouble for five years. Consulted nine doctors. None was smart enough to tell me the cause of it, until the last one said it was from the menopause. Give me a common-sense doctor any time." (Mrs. M. T. E.)

Answer — I'm sorry, but I can't follow you. In my pamphlet on The Menopause (send stamped, self-addressed envelope) I say: "It is a confession of incompetence or ignorance to ascribe any impairment or disturbance of health to a woman as happens to have at this time to her age or to the menopause."

"My husband applied castor oil twice a day to a black mole on his temple. In about two months it disappeared and not a speck of it left." (Mrs. G. A.)

Answer — If I want, mole, or other such skin lesion we learn to disappear within two months, then it should be surgically removed. Remember, such surgery is perfectly painless, is usually done in the doctor's office and removes a potential source of malignancy. However, if I had any such lesion, I'd give the castor oil treatment a thorough trial. It can do no harm.

"Grandma is 71. Daughter is 7. They sleep together, although we have a room for each. Daughter likes to sleep with grandma and grandma ridicules." (W. D. M.)

Answer — If neither disturbs the other's rest it is O.K. Of course if either happens to be coming down with the C.B. or

other communicable disease, the other is pretty sure to catch it.

"Have been feeding my daughter calicoes even though the doctor laughed and said the pains in her legs are just growing pains. Now, thanks to your pamphlet, she never had it so good." (C. M.)

Answer — After all, it is silly to imagine it hurts to grow. Send stamped, self-addressed envelope for pamphlet on Teenage. I wish I could get a copy of

Voice of the People

Declare School Spending Above Necessary Level

Letters will be condensed when necessary because of lack of space. Full name, address and telephone number of the writer must accompany letters but these will not be published if the writer so requests unless the letter is critical in its nature.

Dr. Hutziger says school enrollment increased 1,581 (10 per cent) and personnel increased 404 (60 per cent). This means for each four pupils increased it was necessary to hire more high priced personnel. Why?

He also says there is a need for a double shift on maintenance. Is that increase needed? Where is the money tree that city and county officials pick money from?

With factory employment curtailed, short work weeks the rule and many laid off for perhaps another six months like last year, many losing cars and homes, I believe it's time to slow down on all spending. Vote "NO" on extra taxes.

NJF

People should get active on these questions of the present rate of medical and hospital bills. Free clinics should be started all over the country as many people are going to be without necessary medical care.

Schools should also be brought down just as homes are run. Inability to pay for the extravagances in schools is making children from low income groups unhappy when they can't have what the others have, leading to thievery and delinquency. Parents who want swimming pools, cafeterias, etc., should be in private schools. Frills are not necessary for success.

Wandering Taxpayer

'Ike Prefers Golf So Let Him Play'

I wonder how many readers are as tired as I of continually reading that Eisenhower has played another game of golf. Such digs are obviously political, and they sicken me. We are a family of golfers and proud we have a president who enjoys an outdoor sport. What if he enjoyed horse racing like the British Royal family?

The prize statement was by our own governor in San Francisco when he said, "You can tell when the nation is going to have a new crisis because the President will have packed up his golf bags and gone to Georgia." A state governor should choose his words more carefully. We all know he is campaigning for the next presidency, but he is supposed to be representing the people of Michigan, and statements like that certainly do not represent all of

us. He might stick a little closer to Lanning himself and save the campaigning for later.

We have a wonderful President, and if he wants to play golf instead of taking a cruise, it's sure all right with me.

Patriotic

Former Patients Defend Article

I agree Blank surely must be one who doesn't appreciate efforts of modern medicine and the wonderful work of a wonderful doctor. Many stricken with heart ailment were given hope and life, when they may have once believed their lives were useless. I can thank the doctor, because he gave me a reason to live. I'll be married in June, but I may have never been able to if it weren't for him. If more operations were made known, more people with ailments of this type would be encouraged to learn more about the miracles that can be performed. I, too, thank the doctor, Pontiac General Hospital and The Press.

Nancy Stockford

Millford

Urges Acquisition of Detroit Water

The road is open for a contract for Detroit water. Let's go, not someday, but now.

The quality of Pontiac water is a disgrace. It's a must for a water softener or purifier even through the consumer pays \$30 or \$40 a year to the city for water. The yellow which penetrates white clothes in laundering is impossible to remove. Draw water for coffee in a glass coffee maker and see the muddy color.

The least we can ask and expect of our city for its citizens is pure water.

M. P. M.

'Public Kindness Is Appreciated'

Having recently been involved in an accident with my small son, I want to express appreciation for the kindness people showed me. One man gave me his handkerchief, someone gave me a warm towel and another gave me a baby blanket. And, of course, the sheriff's men were very efficient, as well as the ambulance driver. It's nice to know everyone is so very considerate.

Mrs. Ora L. McNabb

2881 Judah Rd.

In April our home was destroyed by fire, leaving our family of seven with only the clothes we were wearing. Smoke had barely cleared when offers of assistance began pouring in. This demonstration of generosity has been the most heartwarming experience in our lives.

We want to express publicly our appreciation, with special tribute to those who were previously strangers. Also our thanks to the Hartland Fire Department. The foundation of our next home will be built on the knowledge that we are never alone.

Mr. and Mrs. Garland Lenses

Millford

Case Records of a Psychologist:

Don't Surrender to Stage Fright

Arthur should never surrender to his stage fright. Even Moses had it, too, and the Bible says that God grew angry at Moses when the latter tried to beg off from his duty. So learn to accept your duties even though you may be fearful. The "Rule of Three" will help you win.

By DR. GEORGE W. CRANE
Case U-378: Arthur B., aged 17, is a high school senior.
"Dr. Crane, I have been elected president of the Young People's Society in my church," he informed me.

"But I don't know how to make an interesting talk. In fact, I can hardly say a word in public because I

am so scared."

"My hands tremble till I can't read my notes, either, and I blush and stutter."

"Do you think I ought to resign and let somebody else handle the job who can perform better than I can?"

REMEMBER MORES
Moses was just as timid and addicted to stage fright as Arthur, when God told him to lead the Israelites out of Egypt.

And Moses began to make excuses, saying he was slow of speech and with a slow tongue. (Exodus 4:10)

But God told Moses to go ahead, anyway. The Bible even adds: "And the anger of the Lord was kindled against Moses." (Exodus 4:14)

All of you teenagers should remember to accept your proper responsibilities when they come your way.

Don't fret unduly because you are inexperienced or shy or a victim of stage fright.

So is everybody who has tackled a new job. And stage fright is a universal trait of those who speak in public.

Never surrender to your fears, therefore, but grit your teeth and boldly tackle your duties.

Soon you will conquer your former bugaboo. For the "Rule of Three" in psychology will help you win.

That "Rule of Three" says if you face your bugaboo three times and surmount it, you will then be master of the situation instead of slave thereto.

The first time you may feel as if you'll die in the attempt. But you don't.

But at least you don't advertise that fact to the audience.

SPEECH FORMULA

In leading a Young People's Meeting, try to offer the audience a choice, for people will participate much quicker when all they need to do is pick one of two alternatives.

"What do you think about God?" is thus too vague to get a crowd talking.

"Do you think God is more kind or less kind than to human beings?" thus offers listeners a choice so they will participate more readily.

"What do you think about forgiveness?" is also too vague.

"Do you think mothers are more forgiving than fathers when their children make mistakes?" thus gets a crowd to talking sides much faster.

For further advice, send for my booklet "How to Be a Successful Speaker," enclosing a stamped return envelope, plus 20 cents. It is a big aid to church leaders.

Always write to Dr. George W. Crane in care of The Pontiac Press, Pontiac, Michigan, enclosing a long stamped, self-addressed envelope and 20c in coin.

This pulling will make your hands quit trembling, even though you are still as jittery as before.

(Copyright 1937)

Deaths in Pontiac and Nearby Areas

MRS. DELMAR G. VAN CAMP

Mrs. Delmar G. (Gertrude) Van Camp, a resident of Pontiac since 1895, died yesterday afternoon in her home after an illness of two months. She was 92.

Coming here after her marriage in Jackson, Mrs. Van Camp had lived at her present address, 196 N. Perry St., for 54 years.

She leaves a son, Gordon D. Van Camp of Orchard Lake; two daughters, Mrs. Ruth Seeley of Grand Rapids and Mrs. Mildred Lusk of Ferndale; six grandsons; four great-grandchildren; and a sister, Mrs. Eugene Weatherwax of Jackson.

Service will be at 2 p.m. Monday from the Hutton Funeral Home. The Rev. James Guinan of Trinity Episcopal Church, Farmington, will officiate with burial following in Perry Mt. Park Cemetery.

MRS. OLGA ALLEN

ROCHESTER — Service for Mrs. Olga Allen, 80, of 337 West Kennett St., Pontiac, will be at 3 p.m. Monday from Pidey Funeral Home, Rochester, with interment in Tanner Cemetery, Genesee County. She died last night at her home.

Mrs. Allen is survived by two sons, Harry Allen of Flint and Lewis Potter of Port Huron; two daughters, Mrs. Bessie Hauser of Mt. Morris and Mrs. Anna Viers of Pontiac; 15 grandchildren and 21 great-grandchildren, two brothers and one sister.

MRS. HELEN S. BOHRER

ROCHESTER — Service for Mrs. Helen S. Bohrer, of 412 Wesley, Rochester, will be at 11 a.m. Monday from the Ted C. Sullivan Funeral Home, Detroit, with burial in Grandlawn Cemetery there. Mrs. Bohrer died this morning at William Beaumont Hospital.

She is survived by two sons, Robert J. and Richard R. Bohrer, of Pacific Palisades, Calif.; her mother, Mrs. Minnie E. Robertson of Chicago and one sister, Jane Robertson.

THOMAS J. COLFORD SR.

WALLED LAKE — Service for Thomas J. Colford Sr., 74, of 3603 South Commerce Rd., will be at 10 a.m. Monday from St. William Catholic Church, with burial in St. Mary Cemetery, Milford. Rosary for Mr. Colford, who died yesterday at his home, will be said at 8 p.m. Sunday from the Richardson-Bird Funeral Home, Wall Lake.

Mr. Colford is survived by his wife, Tessie; two daughters, Mrs. Betty Amo and Mrs. Virginia Rowley of Detroit; a son, Thomas J. Jr. of Commerce, and one brother, the Rev. James L. Colford of Ohio.

WILLIAM F. DARBY

LAPEER — Service for William F. Darby, 79, of 1131 West Newark Rd., formerly of Farmington, will be at 9 a.m. Monday from the Church of Immaculate Conception here, with burial in Holy Sepulchre Cemetery. Mr. Darby, who died early today, will be at Muir Brothers Funeral Home. Rosary service will be at 8 p.m. Sunday at the Funeral Home.

Survivors are one son, James, of Lapeer; two daughters, Mrs. James Patterson of Detroit and Mrs. Leo Gardener of Farmington, and four grandchildren.

MRS. MAUDE GLASSFORD

LAPEER — Service for Mrs. Maude Glassford, 74, of Otter Lake and formerly of Lapeer, will be held at 2 p.m. Monday, from Muir Brothers Funeral Home, with burial in West Deerfield Cemetery.

Mrs. Glassford, who died Friday afternoon, is survived by her sons, Lawrence Churchill of Metamora and Donald Glassford of Lapeer; two daughters, Mrs. Roy Dockham of Lapeer and Mrs. John Fenner of Davison; 17 grandchildren, 17 great-grandchildren and a brother.

MRS. CYNTHIA HARNECK

MARLETTE — Service for Mrs. Cynthia Harneck, 72, who lived her entire life in the Marlette area, will be held Sunday at the

United Missionary Church, with burial in McLeish Cemetery.

Surviving are three sisters, Mrs. Grace Alward of Saginaw, Mrs. Phoebe Greenleaf of Cass City and Mrs. John Perry of Snover, also, several nieces and nephews.

ANGUS KENNEDY

NORTH BRANCH — Service for Angus Kennedy, 59, of Banker street here, will be at 10 a.m. Monday at St. Peter and Paul Church here, with burial in St. Peter and Paul Cemetery. Rosary will be said at 5 p.m. Sunday at the Blackburn Funeral Home. He died at 11 a.m. Friday in Lapeer County General Hospital.

Mr. Kennedy is survived by his wife, Doris; two daughters, Mary Ellen of Grand Rapids and Bonnie Jean at home; one son, Allen, also at home and three brothers and two sisters.

GEORGE M. MANTYLA

DRAYTON PLAINS — Service for George Michael Mantyla, 52, of 4137 Myers Rd., will be at 2 p.m. Tuesday from the Sharpe Funeral Home, Clarkston, with burial in Lakeview Cemetery there. Mr. Mantyla, a musician, died today at his home.

He is survived by his wife, Marian; a son, George Jr. of Clarkston; one daughter, Sharon at home; two grandchildren and two brothers and two sisters.

NELSON H. McFARLAND

WEST BLOOMFIELD TOWNSHIP — Service for Nelson H. McFarland, 63, of 6880 Orchard Lake Rd., will be at 3:30 p.m. Monday from Spencer J. Heeney Funeral Home, Farmington. Burial will be in Perry Mt. Park Cemetery. Mr. McFarland died at his home Thursday.

An Oakland County resident for 23 years he is survived by his wife, Maebird K.; two sons, Jack McFarland of Pontiac and Alfred G. Hearne of Birmingham; one daughter, Mrs. Jane E. Jens of Rochester and a sister, Mrs. Luella Alexander of Detroit.

WILLIS VAN ORDER

TROY — Service for Willis Van Order, 64, 47 Hartland Ave., will be at 2:30 p.m. Monday from the Troy Funeral Home. Burial will be in Roseland Park Cemetery. Mr. Van Order died yesterday in Veterans Hospital, Dearborn.

He is survived by his wife; Sophronia; three daughters, Asaleeta Morgan and Walmesta Longtin of Troy and Glenna-Dee Mladjan of Livonia; one brother, and five grandchildren.

MRS. WILLIS RHYNDRESS

ROCHESTER — Service for Mrs. Willis (Cynthia M.) Rhyndress, 82, of 303 Romeo St. here will be at 1 p.m. Monday from Pidey Funeral Home here. Burial will be in Perry Mount Park Cemetery, Pontiac. Mrs. Rhyndress, member of the First Baptist Church here, and a life member of the Pontiac Chapter of OES, died yesterday in Pontiac General Hospital. Pontiac Chapter OES will conduct graveside services.

Surviving is her husband Willis; one daughter, Mrs. Paul Hagle of Pontiac; and a son, Earl Armstrong of Wyoming.

GORDON YAX

ROMEO — Service for Gordon Yax, 16, of 68905 Romeo Plank Rd., will be held at 2 p.m. Monday, at Roth's Home for Funerals, with the Rev. Peter Bell officiating. Burial will be in Davis Cemetery. Gordon was killed in a motor scooter accident Thursday evening.

Surviving are his parents Mr. and Mrs. Stanley Yax; a brother, Eugene; one sister, Gertrude; grandparents, Mr. and Mrs. John Yax of Davis and Charles Masters of Davis.

State Annual Meeting

FOUR TOWNS — On Thursday, the Four Towns Methodist Church will hold its annual conference at 7:30 p.m., and everyone has been urged to attend. District Supt. Dr. William Moulton will be present. Miriam Circle will serve refreshments.

Dairy cows graze an average of nine hours each day.

Deaths Elsewhere

By THE ASSOCIATED PRESS

HOUSTON, Tex. — Forest W. McNeir, 41, Houston building contractor who won almost every trapshooting title in the United States after taking up the sport as a hobby in 1908, died Thursday night.

PITTSBURGH (AP)—Johnny Mock, 64, all-outdoors editor of the Pittsburgh Press and a campaigner for improved hunting and fishing conditions and the preservation of natural resources, died yesterday.

Box Social to Benefit Doctor Booster Fund

LEONARD — Women of the County Corners Extension group are planning a box social event for their husbands and other guests, Tuesday evening at Rowland Hall.

Proceeds of the event will go into the Doctor Booster Fund.

June Date Set for Taking Bids on Romeo School

ROMEO—The Board of Education here hopes to have plans for the new high school building out to contractors within the next 10 days, according to T. C. Filippula. Members approved final plans this week and said they will take bids early in June.

The educators plan to remove all the farm buildings and house on the high school site, except one, which will be moved to a new location on the property. The structure will be used for agriculture, class projects and storage, they said.

The architects had urged the removal of the buildings to fit in with the site plans for the new school.

Michigan's name was derived from the Indian word, "Mishigamaw" meaning "great water."

100 Missionaries Mail Conference Reservations

More than 100 missionaries from a dozen countries and 50 missionary appointees will participate in a missionary conference which begins at 7:30 p.m. Tuesday at the First Baptist Church.

The conference is a joint one, combining the church's annual missionary rally and the 6th annual conference of the Evangelical Alliance Mission (TEAM), an international foreign mission society which has its headquarters in Chicago.

Missionaries will participate in panel discussions and field reports. They will discuss late social and political developments in their countries as they affect the progress of mission work.

The program is designed to provide information about evangelism, education, medicine, publications, radio and audio-visual aids on TEAM's 16 fields, as well as about world-wide spiritual conditions. A sound color film will be shown each evening at 7:30.

OPEN TO PUBLIC

Major services of general interest begin at 3:30 and 7:30 each day. All meetings of the conference are open to the public.

The services will be under the leadership of Dr. David H. Johnson, general director of TEAM, and Dr. H. H. Savage, First Baptist pastor.

About 400 out-of-town guests are expected for the week. They will be entertained in the homes of First Baptist Church members.

Supporters and friends of the Mission from the surrounding area have been invited for day and evening sessions.

TEAM is an interdenominational foreign mission society with more than 780 missionaries working in Formosa, Japan, Korea, India, Pakistan, the Near East, South Africa, Southern Rhodesia, Venezuela, Colombia, Uruguay, the Netherlands Antilles, New Guinea, Spain, Portugal and France.

TV to Feature Excerpts From Life of Schweitzer

Excerpts from the highly-acclaimed motion picture based on the life of Albert Schweitzer will be shown on CBS Television's "Lamp Unto My Feet" on Sunday, 9-9:30 a.m. EST.

"Albert Schweitzer," produced by Erica Anderson and Jerome Hill and distributed by Louis de Rochemont, features Fredric March and Burgess Meredith as narrators.

To discuss the remarkable life of the humanitarian who has devoted his life to medical missionary work in Africa, "Lamp Unto My Feet" will have as its guests Mr. and Mrs. Christopher Okojie, who founded a hospital in Nigeria.

The Okojies, native Nigerians, began their medical work at Irrua, Nigeria and have seen their hospital grow into a 48-bed institution.

Together they have faced many of the problems and hardships that confronted Dr. Schweitzer when he set about to build the now famous hospital at Lambarene in French Equatorial Africa some forty years ago.

Dr. Okojie is currently in the United States taking postgraduate studies at New York's Bellevue Medical Center.

REV. FRANK L. COX

Special Series Slated at Sylvan

New Church Building Planned at Inverness and Orchard Lake Rd.

A special series of meetings will be held at the Sylvan Lake Church of Christ, 3261 Orchard Lake Rd. Services will begin Sunday and continue through May 19 with Evangelist Frank L. Cox, guest speaker.

Day services will be held from 10 to 10:45 a.m. Tuesday through Saturday and evening meetings are scheduled for 7:30 p.m. The Rev. Mr. Cox will speak at the regular worship hours on Sunday.

In preparation for the series, special prayer services have been conducted by the congregation in the homes and church.

The Rev. Mr. Cox, who has served several pastorates, is currently editor of "Minister's Monthly." Author of several books, he has contributed special material to "Homiletic Review" and "The Expositor," magazines for ministers. The future plans of the Sylvan Lake Church call for a new home on Inverness avenue at Orchard Lake road. The Rev. Marvin W. Hastings is the pastor.

All Church Services Devoted to Mothers

Elder M. J. Watkins, pastor, announces that all services at the Church of God, 132 Weasem St. will be devoted to mothers, Sunday.

At the 3:30 service tomorrow afternoon, a special program will be given, including musical numbers and recitations. Mrs. Mary H. Woods will be guest speaker.

Gifts will be presented to the oldest and the youngest mother and the mother with the most children.

Gwendolyn Ramsey will conduct the service, sponsored by the Junior Adult Missionary Group. Mrs. Cecil Brown and Mrs. Reuben Daniels are general chairmen.

Francis McMath, Russell Stanford to Speak Monday

The Men's Club of Christ Church Cranbrook will hold the final dinner meeting of this season at 7 p.m. Monday in the dining room of the church.

Two members of the group, Francis McMath and Russell Stanford, will speak on "Out Interest in Nuclear Power Development in the Detroit Area."

Both men are working on the development, design and construction of the Enrico Fermi atomic power plant near Monroe.

Following the program, an election of new members to the board will be held.

Daily 'Bible Break' Might Bring Forth Hidden Powers

Interrupts Business Routine

Meditation Teaches Man to Repossess His Abilities

By NORMAN VINCENT PEALE

The coffee break seems to have established itself as a basic feature of American business life. New office buildings and factories set aside special rooms for this daily ritual, symbolized by great, shining urns. Coffee breaks are written into union contracts and employers who refuse to permit them are regarded as hopelessly old-fashioned.

Now, I'm not opposed to coffee breaks, but a friend of mine, Dr. Roy L. Smith, a well-known California writer, has come across a better idea. He suggests that, instead of taking a coffee break, why not take a "Bible break?"

It's an excellent suggestion, and I presented the idea in some speeches. One man tells me that he made up his mind that instead of going out and chatting idly with his associates over a cup of coffee for fifteen minutes or so, he would spend that fifteen minutes in his office, reading the Bible.

He also had his cup of coffee there, but the important thing for him was to spend that time reading the Bible. Reading fifteen minutes a day, five days a week, he managed to cover each of the Psalms and all of the New Testament in a very short time. He reports that the result has been quite remarkable.

MANY CONFLICTS

When he started his "Bible break," he'd had a lot of difficulties and there were conflicts and problems he couldn't resolve. But as he filled his mind with the great words of the Bible, his problems began to come into better focus. He finally decided that there are four great principles which he had acquired from this reading and which gave him a power to solve his problems he had never had before.

The first was belief. He learned to believe that through God's help he could do what he had to do. He learned really to believe in God, and as a result, also in himself, in his work, in other people.

Next, he learned to think in an atmosphere of calm and quiet. You can't think successfully without inward calm and quiet. When he achieved that, his mind worked better.

REGAINED BELIEF

Third, he regained a belief in his power to work. Instead of scattering his energies and leaking away his power, he was able to apply himself with concentration. He learned to work effectively.

And last, but not least important, he discovered that you must give yourself to have yourself. He found the creative importance of sharing as a life principle. He began to give, that is, to give 10 per cent of his income to his church, and to give generously to help other people. But he also gave or shared his time and abilities. He gave himself, and in so doing found himself.

These then are the four great principles of power this man discovered in his daily reading of the Bible: believe, think, work and share. It was the application of these principles in his own life that lifted him over his difficulties. His daily "Bible break" showed him the way.

So, if you really want to solve your own problems, try that "Bible break" habit and get those basic power principles deeply embedded in your own mind. As you and I apply the simple, basic techniques of overcoming difficulty which are found in the Bible, life can be so much better. Try a daily "Bible break" and see for yourself.

Parents to Present Children to Pastor

A service of Dedication of Children will be held at the 11 o'clock worship service Sunday morning in Bethany Baptist Church.

Parents will present their children to the pastor, Dr. Joseph L. Chapman. Mrs. Andrew Pepper, cradle roll superintendent, will give a message to each mother.

As a part of the service, Bethany Choir under the direction of Elda L. Sutter, will sing the traditional children's hymn of the church, "I Think When I Read That Sweet Story of Old" and "O For a Closer Walk with God."

Mrs. Dawn Zarnath and her daughter, Sherry, will sing a duet. "Mothers of Tomorrow" will be the theme of Dr. Chapman's sermon.

What is a man profited, if he shall gain the whole world, and lose his own soul?

FIRST COMMUNION — Shown as they observe their First Communion in Our Lady of Refuge Church are Robert St. John (left) and Paul Roger Jewell. Father Giles Bartol is the celebrant. Following the Communion, Robert's parents, Mr. and Mrs. William St. John of 997 Char-

est St. entertained at a family gathering and breakfast. Paul's father and mother, Mr. and Mrs. Paul R. Jewell, invited family and friends to their Elizabeth Lake home for breakfast and dinner.

Ex-Renue Official to Begin Jail Term

NEW YORK (U)—Joseph D. Nunan Jr., former U. S. commissioner of internal revenue, has been ordered to surrender May 23 to start serving a five-year sentence for federal tax evasion. Nunan, 39, was federal tax collection boss from early 1944 to mid-1947. He was convicted July 29, 1954, of failing to pay \$91,066 in taxes, some of it during the period he served as commissioner. The U. S. Circuit Court of Appeals upheld the conviction last September. On March 25, the U. S. Supreme Court turned down his plea of a review of the case.

Lila's Back in Movieland Having Time of Her Life

By BOB THOMAS
HOLLYWOOD — Her career peaking again, Lila Lee is back in Hollywood after a long absence and having the time of her life.
"I haven't seen this place in a long, long time," she said as she took a reminiscent look at the caricature-covered walls of the Brown Derby. She sat down and told of the exciting things that have been happening to her. It all started two weeks ago when the veteran actress came

with her longtime pal, Patsy Ruth Miller, here from her New York home. It was strictly a pleasure jaunt at Miss Miller's suggestion. When they arrived, Lila couldn't figure out why their dates were limited to the Beverly Hills Hotel where they were staying.
On Wednesday night she found out. She was the star of Ralph Edwards' "This Is Your Life."

As part of her payoff for enduring the show, she was given some roles in TV shows. She finished a filmed drama for "Panorama" and is doing a Matinee Theater at NBC this week. Does this mean she'll resume acting full-time?
"We'll wait and see what happens," she replied. "Luckily I don't need it; I saved enough to live comfortably. But it would be fun, I live alone, and a person has to do something to keep busy."

At 51, Lila still has the dark-eyed beauty that endeared her to movie audiences from the silent days to the talkies. She is one of that legion of stars who started with Gus Edwards' "School Days" act in vaudeville. Her movie career goes all the way back to "Male and Female" (1919) and "Blood and Sand" (1922), which she considers the best of her early career.
Lila left Hollywood in 1940 for

A proud and happy mother, Mrs. William Armstrong of Chipewa road will be the center of attention at her home tomorrow as Mothers Day is celebrated all over the country. She is photographed

with her five children, the triplets Peter, Paul and Philip (left to right), Susan (extreme right) and the newest member of the family, Patrick, who is held by his mother.

Mary J. Wiesler Speaks Her Vows

Mary Josephine Wiesler became the bride of David Welch Gilchrist this noon in a ceremony at St. Hugo of the Hills. The Rev. Francis T. Stack officiated at the service.

For the ceremony, the bride chose a gown of antique ivory satin with a fitted basque waist and long hand-tapered sleeves. Appliques of Chantilly lace and seed pearls outlined the portrait neckline.

Matching lace bordered her fingertip veil of illusion secured

by a satin cap appliqued with lace and pearls. Her bridal bouquet was an arrangement of white roses.

Mary is the daughter of Mrs. Norbert H. Wiesler of Birmingham and the late Mr. Wiesler. Mr. and Mrs. James H. Gilchrist of Bloomfield Hills are David's parents.

Mrs. Richard D. Halpin of Columbus was her sister's matron of honor. Others attending the bride were Mrs. Arbie R. Thalacker of Princeton, N. J., Sally Wootton of Pompano Beach, Fla.,

Mary Margaret Morrison of Milwaukee, Wis., and Joanne Pedder of Birmingham.

WHITE OVER MAIZE

Their gowns were crystal white embroidered nylon over maize-colored taffeta with matching wide sashes. Their hats were of maize straw trimmed with tiny lilacs. Sprays of white lilac and yellow iris comprised their bouquets.

David Engel Hershey of Franklin was David's best man. Ushers were Charles J. Feltr and Richard D. Halpin, brothers-in-law of the bride, Keith J. Gilchrist, brother on the bridegroom, and Theodore Schwarz.

For her daughter's wedding, Mrs. Wiesler chose a gown of ice blue silk organza over taffeta. Her headpiece was a spray of lilacs on matching blue French veiling.

Mrs. Gilchrist wore a cinnamon-colored print dress with a small matching hat.

Following a reception at Bloomfield Hills Country Club, the bride changed to a pale blue wool suit for traveling to Bermuda. On their return the newlyweds will reside in Birmingham.

PTA Hears Band at Whitfield School

Selections by the Daniel Whitfield Band under the direction of Fred Weist opened the PTA meeting at the school Wednesday evening. A financial report on the Pontiac schools was given by John Estes.

Nate Mihay discussed summer activities available to school-age children.

Undergoes Surgery

Mrs. Clarabell Roach of Pine street is convalescing at St. Joseph Mercy Hospital following surgery.

For Mrs. Richard Yerex of Hadsell street, Mothers Day has a new meaning. This year for the first time she can answer to "mother." She is shown holding the cause of her joy, little Mark Yerex. Pickett, the family pet, is shown as part of the family group.

All Mothers Stand in Family Spotlight

Mrs. William J. O'Reilly of Old Orchard drive is the proud mother of Mary (left) and Margaret. The O'Reilly family plans a quiet day together Sunday in celebration of Mothers Day.

Personal News of Interest in Pontiac

Mr. and Mrs. John Veneman have returned to their home on Dwight avenue after spending three months at Anna Maria Island, Fla. They visited many places of interest in Florida during their stay and returned by way of the Smoky Mountains.

Mr. and Mrs. William Kemp returned to their East Hammond Lake road home today after spending several days in Chicago.

Mr. and Mrs. Paul Gosick of Riviera terrace and Mr. and Mrs. William O. White of North East boulevard left today for Tucson, Ariz., where they will visit Mrs. William McMorris. They will return to their homes in three weeks.

After spending the winter in St. Petersburg, Fla., Mr. and Mrs. M. S. Danton have returned to their home in Birmingham.

Recently appointed to the business staff of the University of Michigan Men's Glee Club for the year 1937-1938 was John Wargelin, son of Mr. and Mrs. Philip J. Wargelin of Voorhees road. He is serving as the club's assistant publicity director.

John is a junior in the U. of M. College of Architecture and Design. He is a member of Tau Sigma Delta architecture and allied arts national honorary, and he is vice president of Theta Chi fraternity.

Mrs. E. L. Bradley of Starr avenue has traveled to Rondo Beach, Ont., where she will spend the summer.

A surprise birthday party honoring Hubert G. Hill was held recently at the Elks Temple. Attending were Mrs. Hill, Mr. and Mrs. Hudson Hill of Rochester, Mr. and Mrs. Robert Hill, Mr. and Mrs. Russell P. Hill, Stewart Hill and Joyce Deevey.

Mr. and Mrs. William Cornwell

of Rosedale drive are receiving congratulations on the birth of a son, Stephen Brent, May 10 at Bloomfield Hospital.

Maternal grandparents of the infant are Mr. and Mrs. Paul Mancell of Ann Arbor, Mr. and Mrs. C. L. Cornwell of Lansing are the paternal grandparents.

Mr. and Mrs. James B. Smith of Lansing announce the birth of a son, Bradford James, May 1.

Mr. and Mrs. Donald E. Smith of Miller street and Mr. and Mrs. Lewis Fahl of Detroit are grandparents of the infant.

The birth of a daughter, Laurel Lynn, May 7 at Pontiac General Hospital is announced by Mr. and Mrs. Donald Eugene Herron (nee Elaine Baker) of Osmon street.

Grandparents of the infant are Mr. and Mrs. Dale Herron of Coleman street and Mrs. Esther Baker of Osmon street.

'Say It With Music' Ends 22nd Annual Sing Friday

The 22nd annual spring concert, "Say It With Music," presented by the vocal department of Pontiac High School, under the supervision of George Putnam, closed its three concerts Friday night in the school auditorium with enthusiastic praise.

Pianists and organists were Julia Blank, Pat Brown, Sharon Holland,

Lee Patterson, Phyllis Peters, Joyce Rose, Jim Weissenborn, Sharon Wolfe and Eleanor Hassen-zahl.

Assisting the accompanists were Merrie Cantarella, Judy Hartmann, Karen Oxley, Carol Smith, Linda Stickney and Pat Watson.

Stage settings were supervised by Jean Smith and John Allhouse, assisted by Carol Slater and Roger Rodgers. Program design was by Phyllis Sodich and electricians were Paul Tremper and Paul Vest. Ticket chairman was Sally Maier and Walter Ainsworth was head usher.

Entr'acts were presented by Ruth Ann Tower, Jane Austin, Bonnie Allen, Shirley Hutchinson and the Boys' Glee Club.

Panel Discusses Communication at PTA Meeting

"Home-School Communication" was the topic discussed by the panel Thursday evening at Bethune PTA meeting. Mrs. Harry Killian served as moderator.

Taking part were Mrs. William Mihalek, president of the Pontiac Council of PTA; Mrs. Stanley Boyd and Charles Tucker Jr. of Detroit, a newspaperman. A question and answer period followed the discussion.

James Therfield presented a vocal solo accompanied by Mrs. Robert Burns, and John Harrison's room won the attendance award.

Mrs. Mihalek installed newly elected officers, and presentation of pins was made by Mrs. Purvis Hunt and Mrs. John Turner. Mrs. Robert Curtis' room mothers were hostesses for the evening.

Couple Planning June Marriage

Mr. and Mrs. Ronald D. Lareliere of Detroit announce the engagement and approaching marriage of their daughter, Carol Jeanne, and Charles E. Gamester, son of Mr. and Mrs. Harold Gamester of Harper street.

Both attend Michigan State University where she is a member of Alpha Phi sorority and he is affiliated with Sigma Alpha Epsilon. They plan a June 22 wedding.

Mrs. Roy Foubender and Mrs. Harry Allen took part in the program Friday afternoon at the luncheon meeting of the February-December Group of First Presbyterian Church.

Mrs. Donald Robertson of East Hammond Lake road was hostess to the group assisted by Mrs. T. J. Lassen, Mrs. Andrew King, Mrs. George Reed and Mrs. Merle Voss. Mrs. Berry Steele of Newark, Ohio was a guest of the group.

Meeting Conducted

Mrs. Christian Theis was elected to head the activities of Dames of Malta Sunshine Group at the Wednesday evening meeting held at Malta Temple.

Salad Goes Round and Round

Mrs. Graham Puts Hard Cooked Egg in Aspic-Filled Pepper

By JANET ODELL, Pontiac Press Home Editor

If you like tomato aspic, this Cartwheel Salad will be just the thing for you. It is a pretty salad that you can serve on a luncheon plate or as a dinner salad.

Mrs. John G. Graham of Forest Lake is today's cook. She and her family enjoy hunting, fishing, canoeing and most outdoor sports. She gardens, likes to cook, reads and plays bridge.

CARTWHEEL SALAD
By Mrs. John G. Graham

1 package unflavored gelatin
1 1/2 cups tomato juice
Dash of salt
1 hard cooked egg
3 hard cooked eggs
3 green peppers

Soften gelatin in 1/2 cup of tomato juice. Heat the other cupful to boiling and add first mixture. Add salt and onion. Let cool to syrupy stage.

Cut off tops of peppers, crosswise with a very sharp knife. Put two slices on greens for each serving. The different colored circles make a most attractive salad. Serves 6-8.

Represent Chapter

Mrs. Martin Wager and Mrs. L. V. Ostrander represented Chapter CL of PEO at the recent meeting of Oakland County Cooperative of PEO held in Birmingham Community House.

Disaster Plans Are Explained to Lincoln PTA

Robert Lake, father vice president of Lincoln Junior High School PTA, took part in the discussion of "Disaster Planning - City and Countywide."

Other speakers at the PTA meeting included Robert A. Steiner, assistant chairman of the Pontiac civil defense program, who told of the organization of civil defense in the city, and Glen D. Smith and Merritt D. Clark, Red Cross volunteers.

Mr. Smith and Mr. Clark told of mass feeding stations and medical care to be made available to citizens in case of disaster. Arthur Heaton of the Ground Observer Corps explained his work in protecting the area from disaster.

Mrs. Morris Cucksey presided. Refreshments were served by Mrs. John Giles, Mrs. Coy Anderson, Mrs. Russell Bell and Mr. and Mrs. John Blacker.

New members of the board of directors are Mrs. Thomas Dodson, Mrs. Henry Warren, Mrs. Rose-line Hickman, Mrs. Earl Luchen-back and Mrs. Mary Jones. Mrs. Herman Dennis presided at the election.

Mrs. John Howden of West Huron street entertained 27 members and guests of the First Philathea Class of First Baptist Church. Taking part in the recent program were Mrs. Margaret Putnam, Mrs. Florence Harcourt, Mrs. Gertrude Ostrander and Mrs. Warren Westcott.

Judy Harnack, Kay Underwood and Carol Hillman presented three numbers. Mrs. Ida Bryan served as chairman of the refreshment committee.

Members sewed on cancer pads when they met at Mrs. F. G. Van Horn's home on Mechanic street. Mrs. Vanhorn was assisted by Mrs. H. C. Manus and Ellen Moody.

Mothers' Club Elects Officers

Elected president of the Mothers' Club of the Pontiac Boys' Club was Mrs. Arthur Longlake. The dinner preceding the meeting held at the Boys' Club was served by Boys' Club members under the direction of Mr. and Mrs. Michael Florille.

Also on the slate of officers are Mrs. Walter Peters, vice president; Mrs. Cameron Clark, treasurer, and Mrs. Lester Christian-son, secretary.

Standish Group Holds Meeting

Twenty-two members and four guests attended the dessert-luncheon and meeting of the Standish Group of First Congregational Church Friday. Taking part in the program was Mrs. August Shier.

Announcements were made of the luncheon the Women's Fellowship will serve May 21 to visitors attending the Methodist Conference and of the Women's Fellowship meeting May 24. Announcement was also made of the blood bank being sponsored by city Protestant churches.

Try Regular Routine for Health, Beauty

Housework Isn't Enough Exercise

Exercise whips up circulation and uses large
muscle groups as they are employed in special exer-
cises.

By JOSEPHINE LOWMAN

We often hear women say, "Why would I need to take exercises? I get plenty of it doing my housework!" It is true that the woman in the home is on her feet a lot of the time and that she does get more exercise than the woman who sits at a desk most of the day.

Nevertheless, the exercise which is truly valuable whips up the circulation and uses the large muscle groups as they are employed in special exercises. Many women who seem busy actually lead rather sedentary lives when looked at from this viewpoint.

They may spend much time sewing, at club meetings, committee meetings, church meetings, luncheons, bridge and the theater. They do not get maintained physical exercise at any period during a busy day. Their exercise consists of dashing in between sitting-downs.

I know that time is at a premium but why not count an exercise plan in on your daily time budget? If you will do this I feel sure you will find that many of your defects in complexion and figure will disappear. You also will notice a big uptake in energy and a loss of tension.

Just 20 to 30 minutes a day will be beneficial. Start in with a shorter period and work up to this, resting in between exercises for a few moments whenever you

need to do so. Today I would like to give you a few easy motions.

1. Stand tall. Walk in place lifting the knees high up in front of you. Do not bend the knees under you but lift them up in front of you. Assume good posture while doing this — spine straight, abdomen in and hips under.

2. Stand tall, arms hanging at sides. Lift the arms upward-upward as you rise high on your toes. Clap your hands overhead. Lower arms to sides and heels to the floor. Reach for the ceiling on this one so that you feel the stretch. Do not allow the chin to push forward. Lift it slightly.

3. Stand with the left side toward the wall and the left hand on the wall. Swing the right leg forward and backward, reaching as far in each direction as comfortable. After a while turn the right side toward the wall and swing the left leg forward and backward. Keep knees stiff.

If you would like to have my six introductory exercises, send a stamped, self-addressed envelope with your request for leaflet No. 25. Address Josephine Lowman in care of The Pontiac Press.

Auxiliary Arranges
for Theater Party

Mrs. Wilfred Thompson was appointed chairman of a theater party planned by the Ladies Auxiliary to the Master Plumbers when the group held a dinner meeting at Hotel Waldron Tuesday evening.

Mrs. Lloyd Thornton and Mrs. Ted Cook reported on the recent state convention held in Detroit. Announcement was made of the National Plumbers Convention in Dallas in June. Mrs. William Williams was a guest of the group.

Launch Hobby Instead of Worrying

By ANNE HEYWOOD

Sometimes we worry about a problem so much that we cloud the picture and make it that much harder to solve.

I've known people to whom problems are a chronic ailment.

For years, they strain and strive to solve them. But they try so hard that they're too exhausted and confused to find a solution.

In a case like that, it's a good idea to drop the problem entirely for a few days or weeks, and take one's mind off it entirely. Then it frequently solves itself.

That's what a friend of mine did and it worked beautifully.

She is a hard-working widow, with three teenage children. She had a part-time job which paid very little and kept wishing it was more lucrative.

NO SKILLS, TRAINING

"But what could I expect?" she asked me. "I have no skills, no training. I got a job selling in a shop in town and that was the best I could do. There wasn't much money in it, but, try though I would, I couldn't think of anything better."

"I used to like awake nights, trying to think of some way of making more money. But the more I thought, the more hopeless it seemed."

"Finally," she went on, "I decided I was driving myself crazy this way and I had to stop. This wasn't easy to do for I was in the habit of worrying."

"So I promised myself I'd take up gardening, a hobby I'd always meant to try."

"I got window boxes and filled them with easy things. I got a book on window plants and studied it whenever I found myself

fretting. I kept the book beside my bed."

READ PLANT BOOK

"During the night, instead of tossing and worrying about the job problem, I just turned on the light and read my plant book. In the mornings, instead of moaning over the low-paying job, I put the time into my plants."

"It's funny," she told me, "but little by little, I began to worry less — didn't really have time for it. And I guess my disposition improved — the kids say so, anyway."

"I became so interested in my plants that I had a fine time comparing notes with people, even customers."

"You can imagine what hap-

pened. A woman who owns a florist shop offered me a job. She said she would not only pay a straight salary but also a commission on what I sell!"

IMPROVE LIFE

The hobby you engage in may not lead directly to the job. However, you can be sure that if you'll take your worrying time and turn it into hobby time, things will improve in your life.

If, like Mrs. W., you've always meant to take up gardening, send me a stamped, self-addressed envelope, care of The Pontiac Press, and I'll send you my list of good books in the field.

(Copyright 1957)

No Invitation
Necessary
Before VisitCouple Should Call
to Make Sure That
Hostess Is Ready

By EMILY POST

A reader tells me: "About two months ago a close neighbor of ours moved from here into a house of her own out in the suburbs. Would it be proper for my husband and me to drive out there some Sunday to visit them, or must we wait for her to invite us to see her new house?"

Answer: It is not necessary to be invited to the house of a friend. I do think, however, that you should call ahead of time and ask if she is ready to receive visitors.

"Dear Mrs. Post: My daughter is going to be married shortly. The wedding is being held in a church. The reception room adjoining the church is too small for the number of guests invited to the reception after the wedding."

"I would like to know if it would be proper to have the reception at the bridegroom's house? My house is much too small. The bridegroom's mother has graciously offered the use of her house. Before accepting I would like to know if it would be proper to have the reception there."

Answer: If there is neither club nor hotel where the reception could be held, the reason for giving the reception at the bridegroom's house would be perfectly well understood. In fact, this plan is by no means unheard of.

The invitations should of course go out in your and your husband's names and at the end of the invitations the following would be added:

and afterwards at the reception at the residence of Mr. and Mrs. John Brown 1 Park Lane

This explains that you are defraying all of the expenses of the reception and that the house of the bridegroom's parents is obviously being used because of its size.

Wooden Clothespins New Lure for Bass

COLUMBUS, Ga. (U.S.)—Wooden clothespins are the latest in lures for the wily bass.

You take a clothespin, snap an effervescent tablet in it, bore holes for the casting line, fasten on some hooks and you're in business.

Tom Kinney, sports editor of the Columbus Ledger, describes the gadget in his column today and says, "Bass go for the spinning, bubbling clothespin lure like mad."

Rifle River Area Open

ROSE CITY (U.S.)—The Rifle River area in Ogemaw County is now open to fishermen and can be entered on roads from both Rose City and Lupton, the State Conservation Department reported. The area had been closed because of road repair work east of Rose City.

John Morris

Nellie Fox has had only 20 home runs in his nine-year career as a major league infielder, but the 180-pound Chicago White Sox star has just as much right to claim a favorite hitting park as Ted Williams and Mickey Mantle.

He, too, likes Briggs Stadium. Nellie hit four home runs in 1956, and three of them came on Detroit Tiger property. His first one of the 1957 campaign arrived last night—again at Briggs Stadium.

The sports fishing institute reports the first decrease in fishing license sales since World War II. The 1956 figure was 16,211,767 which was a decrease of 132,835.

One of the top performers in the Wayne-Oakland baseball loop thus far has been Clarkston's Dave Gaddis. He has won four games and lost two as a pitcher with 30 strikeouts in 45 innings and is hitting over .400.

Notre Dame grid boss Terry Brennan and Floyd Stahl, the Ohio State coach, will head the instructors at coaching schools at Central Michigan and Northern Michigan in August. Bob White, trainer for Wayne and the Lions, will also be on the staff.

Virgil Trucks is reportedly using a knuckle ball in trying a comeback at Kansas City. The former fireballer has won three straight since leaving the Tigers. His next victory will give him 170 in his 16th season.

The Lapeer County Bowmen are sponsoring an archery carp contest which closes May 31. Three cash prizes will be awarded for the largest carp shot with a bow and arrow. Several Inlay City residents are expected to take part.

Gerald Erickson of Pontiac has been named to receive the expert rifleman's medal by the National Rifle Association. An 18-year-old Highland Park Junior College student, Erickson earned the 2nd highest award in American Junior shooting by firing his way through 13 lower NRA qualifications. He has shot several hundred targets in the last few months and can become a Distinguished Rifleman by conquering one more set of targets. Gerald is an OCS member.

Ortega Wants Basilio Next

2nd Win Over Logart Boosts Mexican for Title Shot

SYRACUSE, N.Y. (U)—Gaspar Ortega's second consecutive victory over Cuba's slick Isaac Logart has boosted the strong Mexican Indian's claim for a title shot at welterweight champion Carmen Basilio.

"We want Basilio and nothing else," said Ortega and Manager Jimmy Stinson after Gaspar's bull-dozing power assaults had gained him a close, split decision in a telecast 12-rounder last night in the War Memorial Auditorium.

Ortega's contention was backed by Harry Markson, managing director of the International Boxing Club.

A strong, pressure drive in the ninth, 10th and 11th rounds of a bitterly waged battle—marked by a low blow "knockdown" of Ortega in the second round carried the 3-10, 21-year-old Mexican to his important triumph.

3-Way Track Battle

WILLIAMSBURG, Va. (U)—Virginia Tech's defending champions and perennially dangerous VMI loomed as the top challengers for William and Mary today as the finals came up in the Southern Conference track and field championships.

LOS ANGELES (U)—An aching back has ended the career of one of baseball's greatest Negro players—Monte Irvin.

Irvin, one of the chief agents in the almost miraculous drive that brought the New York Giants the National League pennant in 1951, announced yesterday that he is retiring.

The veteran outfielder said the reason is a back injury he suffered in spring training. Because of the injury, he appeared in only four games for the Los Angeles Angels of the Pacific Coast League this season. He won one of them with a home run and was hitting .300 after his last time at bat.

Monte, who admits to 39 years,

LIKES BRIGGS STADIUM — Nellie Fox, who puts on plenty of mileage around second base for the Chicago White Sox, still finds Briggs Stadium to his liking. The little American League all-star rapped out his first homer of the season in Detroit last night. Last year he hit three of the four he had in Briggs Stadium.

Phil Rookie Extends Win Streak to Four

By THE ASSOCIATED PRESS

Philadelphia's Jack Sanford stood out today as the early season favorite for the major league's rookie-of-the-year honors.

Sanford, 27-year-old right-hander who joined the Phillies last September after two years in the Army leads all National League pitchers with a 4-0 record.

A three-hitter by Sanford last night highlighted Philadelphia's 3-1 triumph over Pittsburgh which boosted the Phillies into fourth place, one game back of Brooklyn.

The rookie fanned 10 and had a shutout until the ninth. Then a walk and Hank Folter's triple produced the only Pirate run.

Milwaukee snapped its three-game losing streak with a 10-5

victory over St. Louis that increased the Braves National League lead over the Cincinnati Reds to one game. The Reds' scheduled game with the Cubs in Chicago was postponed because of rain.

The New York Giants dropped third place Brooklyn two games from the top with a 2-1 triumph over the Dodgers.

A pair of wild pitches by Luis Arroyo, in relief of Ronnie Kline in the eighth inning, allowed two Philadelphia runners to cross the plate with what proved to be the winning runs. Granny Hamner's second home run since he took over at second base three games ago gave the Phillies their first run.

Juan Pizarro Milwaukee's rookie southpaw, gained his first major league victory with the help of teammates Johnny Logan and Eddie Mathews, who drove in eight of the Braves' 10 runs. Logan batted in five with a home run, a two-run double and a pair of run-scoring singles. Mathews smashed a two-run homer, doubled and added a run-producing single.

Crimian Given Tiger Release

DETROIT (U)—Relief pitcher Jack Crimian has been released outright by the Detroit Tigers to the Toronto club of the International League.

Crimian appeared in four games for the Tigers after being obtained in a winter deal with the Kansas City Athletics. He had a 12-00 earned run average for 5 and 2-3 innings and was charged with one loss. He failed to get a victory.

Outfielder Bill Wilson of the Toronto club will be sent to the Tigers' Charleston farm club in the American Assn. The Charleston Club also has recalled from Toronto the options of pitchers Larry Donovan of Ionia, Mich. and Bob Shaw.

ST. PETERSBURG, Fla. (U)—The four pre-tournament favorites play today in the semifinal round of the National Senior Clay Court Tennis Tournament.

Jack Seaton of St. Petersburg, seeded first, faced fourth-seeded Harry Hoffman of Philadelphia.

Pierce Shaky but Still Beats Tigers

White Sox Back in League Lead After 6-4 Win

Little Chicago Lefty Is Hit Hard Early in Game but Holds On

DETROIT (U)—Like a good after-dinner speech, the Detroit Tigers had a good snappy beginning and a crisp closing against the Chicago White Sox.

But like too many speeches, the performance dragged a little in the middle and the Sox regained the American League lead with a 6-4 triumph last night.

With anyone but Billy Pierce pitching for the White Sox, the outcome might have been different.

"One more hit or maybe another run and I'd have yanked him out of there," said manager Al Lopez afterward.

As it turned out, Pierce yielded four ringing base hits good for two runs in the very first inning, righted himself and pitched beautifully until the ninth. Lopez admitted that with another pitcher out there, he probably wouldn't have gone as far as he did with the little lefty who once was Detroit property.

Pierce silenced the Tiger bats from the second inning until the seventh, when Red Wilson homered. He got into trouble in the sixth and Gerry Staley had to rescue him for the final out with the tying runs on base.

"Pierce was a lucky young man," said manager Jack Tighe, whose Tigers had again dropped below the .500 mark. "We had him but we let him get off the hook."

Detroit starter Don Lee failed to finish for the fifth straight time, bowing out amid a four-run Chicago spurge in the fifth inning when the Sox broke a 2-2 deadlock to go ahead for keeps.

Paul Foytack (2-1) was to oppose southpaw Jack Harshman (3-1) in this afternoon's game. Harshman defeated the Tigers earlier in the season. The Tigers will keep Red Wilson in the lineup in place of Frank House with the southpaw pitching.

No Word on Majors' Shift

NEW YORK (U)—The Dodgers are still in Brooklyn, the Giants are still in New York and George Christopher still is mayor of San Francisco. That sums up the surface news of yesterday's mysterious baseball conferences, conducted in a cloak-and-dagger atmosphere.

Because Baseball's Commissioner, Ford Frick, dropped the iron curtain on all public discussion of big league franchise transfers by clubowners, the real story is hidden.

The New York Post said last night that the Dodgers were going to go to Los Angeles in 1958 while the New York World Telegram and Sun reported the Giants were considering San Francisco.

Horace Stoneham, owner of the Giants, did meet with the mayor of San Francisco and Francis McCarthy, chairman of the San Francisco major league baseball committee in a New York hotel yesterday afternoon for about two hours. Walter O'Malley, president of the Dodgers, had lunch with the trio and then left for another meeting after showing them a model of his pet project, an all-weather stadium with a top of some synthetic material.

"We had a discussion about the possibility of bringing major league baseball to San Francisco," said Mayor Christopher in a prepared statement. "Mr. Stoneham is prohibited from commenting further by reason of a telegram from Commissioner Ford Frick with which he desires to comply. As a result there will be no further statements by any of the parties."

Frick lowered the boom on clubowners in a wire to O'Malley in which he said "wide publicity and newspaper discussion of any franchise transfer, at this time is harmful to baseball." He urged that it be pointed out to all interested parties that "headlines and publicity statements at this time will only delay and perhaps upset the program they have in mind."

Although it had been announced that the mayor expected to meet with O'Malley, it was a surprise to most newsmen when Stoneham also appeared at the luncheon date. He said O'Malley had invited him to see a model of a new plastic-top all-weather stadium.

After it was over, the mayor was asked if he felt San Francisco has gained ground in its search for big league ball for which it

Southern Lifters Lead Tournament

LAFAYETTE, La. (U)—Southwestern Louisiana Institute took the lead over Ohio State and the University of Hawaii last night in the opening round of the National Intercollegiate weightlifting tournament.

Southwestern posted 10 points with Ohio State second with six and Hawaii scoring five. Great Lakes, Ill. Naval Training Station trailed with three while Michigan State, New York University and the University of Cincinnati tied with one point each.

has a "contingent" appropriation of \$5,000,000 for a new stadium. "Major league baseball on the Pacific Coast is an eventual must," said Mayor Christopher, "whether it's immediate or later on. We're prepared to pay the bill for a major league club."

Asked if San Francisco would prefer the Dodgers or Giants, the mayor said, "We can take either one. Whichever one we get, will trounce the other."

Six Teams Qualify

PHS, Skippers Out, Rams In

Out of nearly a dozen entries in MHSAA regional golf tests yesterday, Pontiac area high schools put six in the state meet next Friday at Midland Country Club.

Qualifiers included St. Francis which won the "C" test at Brookwood, Flint, with 378, with Orono St. Paul far behind in 2nd place at 468. Eddie Kast was medalist with 84. Pontiac and Waterford in class A at Brookwood both missed the boat. Flint Central and Royal Oak Dendro tied at 341, and Central was in a playoff between the two school medalists, Berkeley was 4th and Arthur Hill 3rd on the list with 333 and 346.

Gene Hunt of FC was medalist with 77.

Chiefs were 5th, just out of the qualifiers, with 359. The Skippers were 14th with 410.

Rams' qualifiers were Ed Kast 86, Dick Kast 89, Joe Keller 98 and Bill Haps 103.

At Burroughs course, Brighton, Birmingham was three strokes back of Ann Arbor at 333 in Class A. Ypsi Central was 3rd with 353 and Plymouth 4th with 355. Maples Pete Green's 78 was low, but two Class C-D shooters were even better. Joe Brisson of G. Pts St. Paul had 73 (2 over par), and Mike Hill of Jackson St. Mary had 77. Bud Badger of Bloomfield Hills, which was 4th in "B," was medalist in his division with 81, on a one-hole

Cornell Rated Over Yale in Regatta Today

By THE ASSOCIATED PRESS

Cornell's slick, powerful all-senior eight was rated a slight edge over Yale's Olympic champions in the battle of the rowing unbeatens on Cayuga Lake today.

There was a good possibility, however, of a four-way battle in the two-mile Carnegie Cup Regatta at Ithaca, N. Y. Syracuse has a fine, eager crew on the way up and Princeton journeyed to Cayuga inspired by its impressive victory over Harvard and MIT in the Compton Cup last week.

On the record, though, this looks like another big year for Cornell and Yale. They grabbed everything in sight last year. Yale beat Cornell and Princeton in the 1956 Carnegie Cup, bowed to Cornell in the Eastern Sprints and then swept the all-important Olympic Trials over Cornell. From there the Elis went on to win the Olympic title at Melbourne.

Full Scrimmage Closes Spring Session Today

Newcomers to Receive Special Attention in Maize-Blue Contest

ANN ARBOR — Under drizzling rains on its soaked turf in the University of Michigan stadium, the Wolverines were scheduled to conclude spring practice today with a full-scale scrimmage under the watchful eye of coach Benny Oosterbaan.

The session scheduled for 2:00 p.m. was open to the public without charge.

Reward for those who receive a "passing grade" in the grid exam will be a place on the list of those candidates who will be invited back to the training table at the opening of fall practice.

Regular periods will be played but the game will continue until all candidates have had an opportunity to show their wares.

While the number of regulars will be missing from the line-up because of competition in other sports or concentration on studies, a fair sampling, particularly of newcomers, should be on parade today. Chief among those missing will be several members of the baseball squad, principally fullback John Hermsen and Gene Snider, center, both regulars on the diamond squad and Jim Pace, left halfback, who is on the track squad.

A pair of impressive newcomers in Fred Julian, 180 pound Detroit and swift-running youth, Al Groce from Clairton, Pa., will receive special notice. Julian, however, may see only limited service if Oosterbaan decides to use him because of injuries received in scrimmage last week.

Groce, one of the pleasant surprises of the spring drill, has real speed and is a shifty runner. Weighing 180, he still has to polish his blocking considerably but he and Julian have been the most impressive of the youngsters.

Among new linemen are such players as Jared Bushong, Toledo, who may be either a guard or tackle; Fred Olm, giant guard from Niles; Fred Olm, tackle from Detroit; Mike Fillicchio, guard, River Forest, Ill., and Mike Du-puy, center, Monongahia, Pa., Doug Oppman, guard, Gary, Ind., and Doug Orvis, center of Flint.

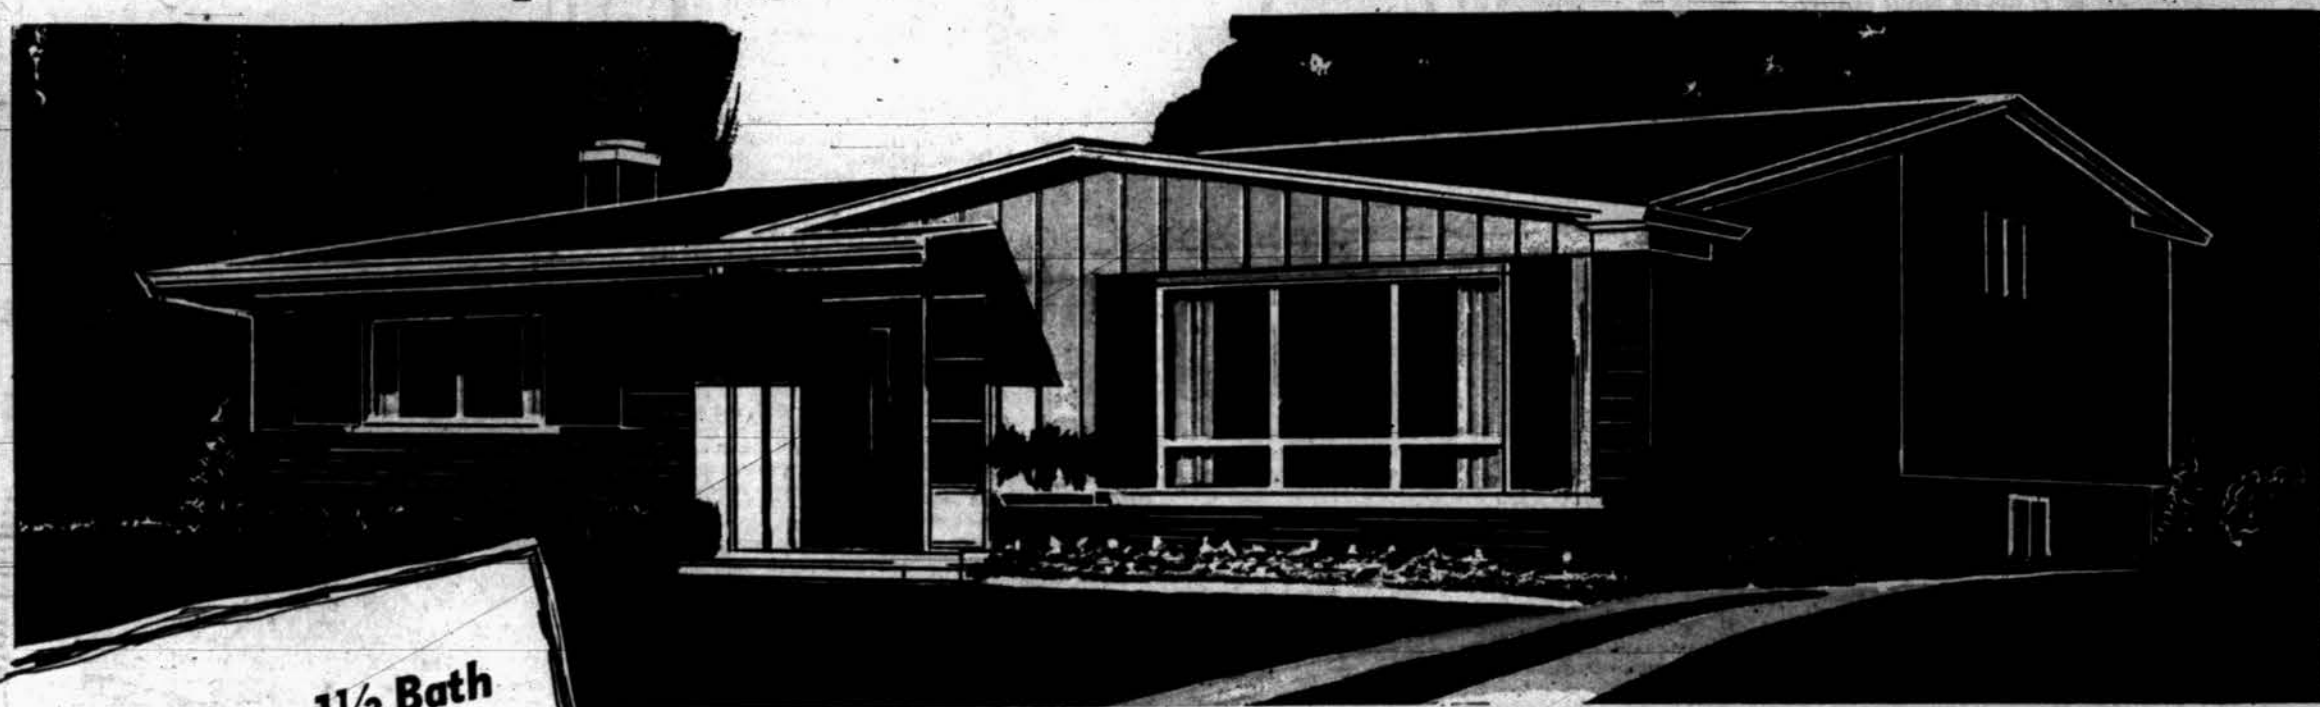

Demaret Turns in Red Hot 66

HOT SPRINGS, Ark. (U)—If the Hot Springs Country Club course continues to improve for Jimmy Demaret, the Kiameha Lake, N. Y., pro can start counting the prize money in the \$20,000 Hot Springs Open Golf Tournament.

The scizzing score didn't earn first place for Demaret yesterday. Big, blond Al Benselink put a 68 with an opening day 70 for a 138 total that gave him a one-stroke lead over Demaret and three others.

Touch-Up Paint Product Covers Chips, Scratches

A new product for touching up chips and scratches on porcelain and white baked-enamel surfaces is now being distributed by the makers of Johnson's Wax.

Called Skar, the product is being offered as a premium with each bottle of Jubilee, the company's "clean-up" wax. The bonus bottle is attached to the Jubilee in a cardboard boot. It has a combination cap-and-brush applicator.

The touch-up paint product is for use on stoves, refrigerators, washing machines, cabinets, sinks and other surfaces that have been scarred and thus detract from an otherwise spotless kitchen or bathroom.

Care for Porch Like Any Room

Create Summer Retreat With Color, Lighting, New Furniture

What are your porch plans for this summer?

This is a good time to think what might be done to assure pleasant use of the porch come those sultry days when it may be the coolest part of your house.

In spite of the cooling relaxation it provides, the porch is the least-used area of many homes—for the reason that it is run-down and unappealing to members of the family.

A modest investment could remedy those faults and make the porch into an ideal summer retreat. Here are some suggestions:

1. Get rid of any broken-down or worn-out furniture on the porch. Then determine the use you will make of the space and furnish it accordingly. Modern wrought-iron furniture is appropriate.

CHECK FLOOR

2. Check condition of the floor. Rain, mud and snow might have damaged it, or its finish may be unattractive. The installation of a durable, frostproof material such as quarry tile will give the porch a colorful floor that is virtually damage-proof.

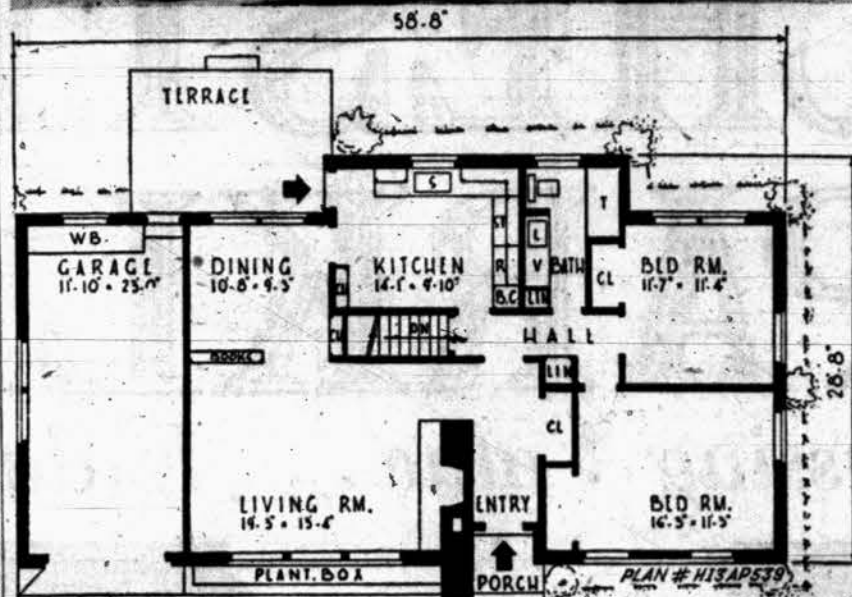

3. Don't depend on a single large ceiling bulb for light. Provide even lighting for the porch as you would for any room of the house.

4. Finish the walls and ceilings in attractive, cool colors. Screen the porch if insects are a problem.

5. Plan to serve evening meals on the porch. A serving cabinet there and a tea cart to bring supplies from the kitchen will ease work for the homemaker.

6. See that the porch has storage space for equipment kept there and for children's playthings.

HOMES FOR AMERICANS

SMALL RANCH — Easy traffic circulation and privacy keynote this two-bedroom ranch home, with unusual fireplace arrangement.

Square footage is 1,219. This plan is H13AP539, by Homograf, 11711 E. Eight Mile Rd., East Detroit, Michigan.

Be Sure You Can Clean Colorful Kitchen Surfaces Easy to Panel With Plywood

WASHINGTON, D. C. — The kitchen is a wonderful place. It's the one room which can establish a happy home and keep it that way—not only for the delicious foods that come from it but because of the cheer and feeling of well being that its colorful contents can impart.

Nice thing about kitchens is their magnetism. Parties gravitate to them. New friends relax completely when once made welcome there. It's an old story about children taking all friends and acquaintances right to the kitchen.

Undoubtedly the symbol of a friendly household to young and old, no wonder that the way to a home's heart is through the kitchen. That is why it receives so much creative attention from so many talented people.

Concentrating on kitchen betterment are architects, decorators, cabinet makers, chemists, electrical engineers, equipment and gadget manufacturers, designers of floor coverings, and makers of every kind of coating. Using everything that art, science and industry can produce, they have made the American kitchen the admiration of the world.

With all these people working for you, your kitchen can easily be made a show-place. But if it is to be both inviting and charming, two things are essential.

First, you must make sure that all surfaces of your room and equipment are well finished. Keeping your kitchen bright and clean depends on the quality of these finishes. No kitchen can look beautiful long if the finishes cannot stand wear and frequent cleaning.

Second, the room should have individuality and character. Everything in it should harmonize. Thoughtful planning of color can do that for you. It will pay huge dividends by giving you the lift that comes from being in surroundings that are expressive of you... that are congenial to you.

If your kitchen lacks natural light, try painting its walls a clear and sunny yellow. Keep the ceiling white so it will reflect as much as possible of the light that strikes it. Pearl gray floor covering.

touches of the new violet shades—and perhaps a pot of ivy on the wall—will complement the color scheme.

If your present kitchen is a large one, consider yourself lucky. Just remember that a too-large kitchen need no longer be a problem. It can be converted into the most modern of all kitchens (large kitchens are back in style), combining a streamlined working section, a lunch bar and an informal lounging area.

The color scheme for the lounging area can be picked up from the colors in the kitchen proper. Say the kitchen is blue with a white trim—do the lounge in different shades of blue and add warmth by using yellow on the furnishings. If green is your color, try misty green walls, darker green upholstery and a warm rose-red for accent color inside drawers, behind dishes and in the fabric of curtains and towels. But above all, use colors that express your own ideas and personality.

Color—in the form of paint—is your friend and ally. It works wonders in your life—a lot of which is spent in your kitchen.

Glass Block Is Easy for Kids of Decorate

Whether it's a Cub Scout den meeting, a gathering of eager Brownies, or just a way to keep the youngsters out of mischief on a rainy day, here's an idea for keeping the small fry constructively busy.

Let them try their hand at decorating glass building blocks for use as book ends, door stops, lamp bases or other purposes. Handsome in their own right, a colorful decalcomania, cutout picture or even a bit of individualistic art work pasted to the sides of the block will make it an attractive ornament for the home or office or an ideal and unusual gift.

Insulux glass block are sturdy, easy to handle, and there is no danger of chipping or splintering unless they are subjected to violent abuse.

FOR ALL THE FAMILY

Here's a wall that has its hands full keeping all members of the family busy. Built of Douglas fir and finished to retain the beauty and grain of this wood, this wall section is ideal for a corner of the family room or den and is as lovely as any piece of furniture. It contains TV set, hi-fi equipment, phonograph, record storage and radio below with a section for display of magazines and game storage above.

Old or New Houses Can Be Insulated

Walls can be effectively insulated whether a house is old or just being built. The easiest way is to do the job while a house is under construction.

Batts or blankets of insulation, such as the various mineral wools, are installed between the wall studs providing up to 3 inches of cellular heat stoppers. This not only will be a barrier to the cold in winter, but also will go far toward preventing walls and ceilings from becoming radiators under the heat of the summer sun.

In an old house, it is unnecessary to open the walls to install batts or blankets. Loose mineral wool is blown into wall cavities completely filling the spaces between interior lath and plaster or wallboard and the exterior sheathing. Being loose, this material peeks around conduits of pipes within the walls to produce a snugness the year round.

Cut Trees by Moonlight

Natives of Central and South America contend that mahogany trees should be cut by the light of the moon—that they're sounder in the moonlight, freer of sap and of richer color. But the National Lumber Manufacturers Assn. says this is just an old superstition.

Wood Deadens Sound

Wood-paneled walls will reduce noise level in your home, says the West Coast Lumbermen's Association. To absorb sound in the huge UN auditorium, the association says two walls were constructed of heroic size wooden louvers.

All New Houses to Settle Some During 1st Year

If your new home seems to have fallen in a hole, relax a little. Your home is just settling. If moderate and evenly distributed, the result is not likely to be much more than a few loosened nails or a crack here or there in a wall or floor.

Some shrinkage also is expected, according to Home Facts, a book for homeowners. Lumber for the house frame, containing some moisture from being stored outdoors, dries out in the warm house and shrinks accordingly.

This may cause some sticking of doors and windows and some cracks in the plaster. If there is a problem with any of the doors, plane or sandpaper to restore normal operation. The windows can be lubricated with graphite.

Concrete also shrinks as it sets, and this may cause cracks to appear in the foundation.

In houses being heated for the first time it also will help to minimize shrinkage if temperatures are kept at 70 degrees or less.

Wool Socks Not Needed

Blowers near floor level are a feature on a number of gas-fired room heaters. They spread warm air out over a wide area, and are a solution to cold floor problems. Room heaters come in a wide variety of sizes and styles, and a number of new finishes have been added.

NEWS VIEWS

By Realtor Partridge

Lately there have been a number of experts saying that the breakdown in a lot of domestic situations is due to the reduced importance of fathers in family life. But Dr. Duval of the National Council on Family Relations claims the trouble with husbands is that they still think they're the big boys... and, according to the Doc, this makes them as old-fashioned as high button shoes and "23 skiddoo!"

This sort of gives the impression that the family meal ticket is tossing a wrench in the wheels of progress and slowing up the parade. Pop's critic brings up a haymaker from the floor by saying, "Their old master-of-the-household role just doesn't fit any more." Of course, the doctor happens to be a lady... Dr. Evelyn M. Duval. Could she be biased?

In Farmer City, Ill., Russell Sparrow married Edna Swallow. We hope they didn't just fly into this thing... Of course, to make a perfect story, they ought to move to Pontiac and let Partridge find a home for them! Well, it's a fact new residents in the area soon learn, when it comes to buying a home, or any other type of real estate.

Cross Design Still Popular on Doors

For centuries the sign of the cross in the design of a front door has been a home-owners' tradition. It began as a means of obtaining divine protection for the household.

Entrance doors incorporating the sign of the cross in their design remain popular today. Doors of ponderosa pine are available with paneling outlining a tall, slim Latin cross, an X-shaped St. Andrews cross, a square Greek cross, a T-shaped Egyptian cross and the cross of Lorraine.

A variety of ponderosa pine panel doors without the cross design are also available. Ponderosa pine can be painted to match the color scheme of the house or stained to retain the beauty of the grain.

California Law Requires Year Guarantee on Roof

California state law specifies that a home builder or roofing contractor must guarantee a roof against leaks for a year after the house is occupied.

Many builders and roofers in California use asphalt shingles because they provide a tight roof with years of trouble free service.

Safety Carrier for Arms Guards Guns From Injury

A safety carrier for hunting arms also protects prize guns from injury. The case can be attractive as well as serviceable.

Two of each of the parts shown, except D, should be made, if the case is to accommodate two guns. For one gun, one of each part is made, including D.

Use 1 by 10-inch lumber for parts D and C. On each part C trace the outline of the dismantled gun, and cut out the shapes with a coping saw. Sand the pieces smooth and round the sharp edges of the cut out portions. Attach an 18-inch piano hinge, using 3/4-inch screws, to one edge, as shown, recessing the hinge plate.

Make the frames, B, as shown, mitering the corners and fastening them with glue and 4-penny finishing nails. Use picture frame clamps until the glue has set, then chisel out a recess on one long edge to accommodate the 18-inch hinge plate.

Use hardwood plywood for the outer part of the case, part A, and attach with glue and 3/4-inch No. 16 brads. Sink the brads and fill the holes with wood putty.

Join the two parts C to part D, one on each side, using wood glue and 1 1/4-inch wood screws. Counter-sink the screw heads.

When all glued parts have set,

fasten the lids to the case by hinging them to parts C.

Use four small brads with twist staples to secure the lids when closed. Add a luggage handle to the edge of part D, as shown.

Finish the case by varnishing to protect the display surface of the hardwood plywood. Felt may be used for lining of the gun recesses and the inner face of parts A. Additional cut-out areas may be made in parts C, if desired, for storing cleaning rods, an oil can, etc.

Grandma'd Be Surprised

In the prime and proper Victorian era of rose-covered carpets and antimacassars on every chair, forward thinking homemakers were electrified by an amazing new covering for wood kitchen floors, called linoleum, the colors were limited to muddy browns and dull earth tones; installation was for experts only.

Care was a problem and constant waxing a ritual. No one would have been so radical as to suggest it for any other room but the kitchen. Nor would they have dreamed of the varied array of flooring materials and the decorative and service potential at the fingertips of today's home planners.

Vintage 1957, the whole house from basement rumpus room to the guest bedroom in the attic—with the entire living area in between—has found a fresh and functional fashion in hard surface floors. Asphalt, linoleum, vinyl, cork and rubber offer a broad selection, each one designed to answer special home needs.

In recent years, color has appeared, not in a primary kitchen palette but in an unlimited rainbow of style-wise shades. Tiles have been enlisted to create individual designs which can be tailored to room sizes and shapes, as well as the budget appeal of home installations. Technical advances have made possible a whole new concept of durability and maintenance ease.

Overall Building Picture Shows Gain

DETROIT — Contracts for future construction in Michigan in February totaled \$102,110,000, an increase of 14 per cent above February 1956, Marvin J. Brokaw, district manager of F. W. Dodge Corporation, construction news and marketing specialists, reported today.

February contracts by the major construction categories compared to the similar month of a year ago showed: non-residential at \$49,772,000, up 77 per cent; residential at \$52,338,000, down 45 per cent; and heavy engineering at \$25,833,000, up substantially.

The first two month total of construction contracts compared to the like 1956 period showed: non-residential at \$107,274,000, up substantially; residential at \$50,802,000, down 41 per cent; heavy engineering at \$44,379,000, up 60 per cent; and total construction at \$202,653,000, up 23 per cent.

Plan for Intercom When Blueprinting

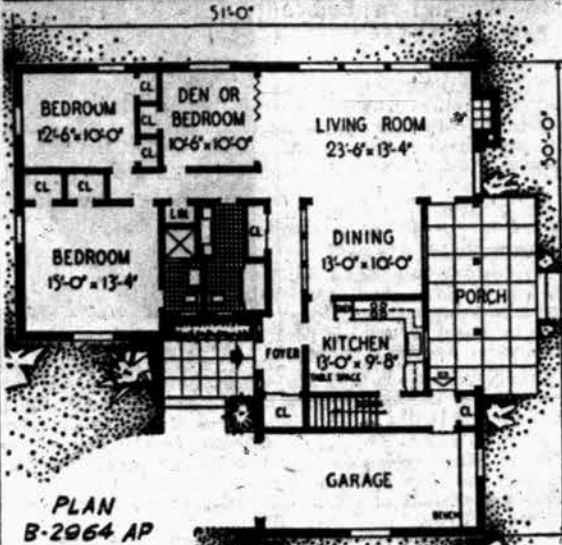

At the suggestion of builders, many prospective home buyers are including plans for intercommunication systems in blueprints for new homes.

A special Teletalk system has been designed that provides intercommunication throughout the home — including answering the door from any place in the house. It can be installed for about the same cost as a set of screens and storm windows.

Oak Floors Not Costly

Floors of beautiful oak now are available at moderate cost in attractive plank and block styles as well as in the popular strip style. The wood can be selected either for uniformity or for variation of grain pattern, coloring and other characteristics.

HOMES FOR AMERICANS

PLAN B-2964 AP

COMPACT AND FLEXIBLE — This plan for a two-bedroom house has a potential three-bedroom capacity by virtue of its convertible den. Two bathrooms, open planned living and dining area and secluded porch are among features. Storage space is generous making basementless construction a practical alternative. The house covers 1,550 square feet without its garage. This is plan B-2964AP by Alvin Cassens Jr., architect, 145 So. Franklin Ave., Valley Stream, N. Y.

Gas Heating Units Warm Cold Spots

Some types of home improvements have to be undertaken on a large scale if they are to be practical at all. But the householder who wants to upgrade home heating often can move step-by-step and piece-by-piece, adding and changing exactly as his needs and budget dictate.

This is an important factor behind the huge demand for gas-fired direct heating units, says the Gas Appliance Manufacturers Ass'n. Sometimes these are the sole

means of heating a dwelling; in other cases they may supplement central heating systems. They are being used, says GAMA, in some of the largest dwellings as well as in many of the smallest.

The category covers a variety of types and size of room heaters, ranging from cabinet models to gas steam radiators and gas fireplace logs.

A cold spot in any part of the home may be eliminated quickly and economically with a suitable unit, with other heating equipment left completely unchanged. Compactness of new gas direct heating equipment, and improvements in venting techniques are special advantages, GAMA reports.

New Adhesive Simplifies Tiling

Do-it-yourself jobs with ceramic tile are on the increase now as a result of new adhesives and simplified methods.

Ceramic tile is waterproof, fireproof, colorfast and easily cleaned, and requires no upkeep.

Only adhesives that bear the U.S. Department of Commerce hallmarks, "Meeting Commercial 57" should be allowed when laying ceramic tile.

To begin you will need the following, in addition to adhesive: A primer for waterproofing the backing, thinner or solvent for cleaning spots of adhesives from tools and from the face of the tiles, a sawtooth trowel for spreading the adhesive, and grout for filling the spaces between wall tiles. A five-pound package of grout is sufficient for 50 to 100 square feet of tile.

Gas Furnace Is Quieter

The gas-fired forced warm air furnace now is the most popular single type of central heating equipment in the entire country, says the Gas Appliance Manufacturers Association. Among many improvements developed during its sensational postwar rise are features that cut blower noise to the absolute minimum.

Do use wood filler to obtain an exceptionally smooth surface on top of a damaged area until mahogany, oak, walnut and other open-grained woods.

Don't place a patch of roll roofing over a damaged area until you have removed all chipped fragments of the old roofing.

Attention---Builders

Improved lots for sale on paved streets, with excellent water and drainage. Ten minutes from largest industrial employment area in Oakland County. Lake privileges, school on property, shopping facilities nearby. New homes in area now selling on guaranteed mortgage programs.

ON BUILDING MATERIALS-DECOR
AND DESIGNS**

Chimneys Fall Into 3 Classes

There are three general types of chimneys in current usage with residential heating plants. They are: the masonry chimney, the factory-built chimney and the Type B Gas Vent.

The latter is not strictly a chimney, but since it is installed in many homes with gas heating systems it usually is included under the general classification of chimneys.

Masonry chimneys usually are constructed of brick or stone and contain rectangular or round flue linings of clay. If properly made, they can safely sustain temperatures up to 2,000 degrees Fahrenheit and can be used with all popular heating fuels — coal, gas, oil (both heavy fuel oil and the lighter, more volatile kerosene) and wood.

Masonry chimneys are custom-tailored, in the sense that they are built on the site, brick by brick, stone by stone. They should be inspected periodically and cleaned out to remove carbon and other material which may have become attached to the interior of the flue.

Factory-built chimneys must be constructed of non-combustible, corrosion-resistant materials, which may include aluminum and aluminum-coated steel as well as stainless, galvanized and plain cold-rolled steel. Some of these chimneys contain porcelain liners, but all are designed to meet the high temperature tests necessary for use with gas, oil or coal-burning home heating plants.

The cost of a factory-built chimney is less than a masonry chimney, but many people feel that it does not have as "homey" an appearance. As a result, some manufacturers supply a box-like enclosure above the roof line designed to simulate the satisfying effect of the masonry chimney.

The Type B Gas Vent is a non-masonry structure of prefabricated construction. Its approval is limited to low-heat gas appliances. These include gas furnaces, gas hot-water heaters and clothes dryers but exclude higher temperature appliances such as gas incinerators or other appliances whose rated flue gas temperature exceeds 550 degrees Fahrenheit. This rules out its use with oil or coal furnaces or with open fireplaces.

Professionals Give Advice on Flooring

Working with any flooring material, do it — yourself enthusiasts can start, best foot forward, with this professional advice. The alone is suitable for home installation projects; yard goods and complex tile arrangements best left to the experts.

A properly prepared floor is the only basis for a successful result. Both wood and concrete must be clean, level and dry. Cracks and crevices should be filled in; loose boards nailed flat; paint, grease or varnish removed.

Lining felt is said to be good insurance for a smooth under-surface. After installation, temptation to see the finished room should be sternly resisted and the floor protected from footsteps and heavy furniture for at least one night and day.

Check list complete, the only limit placed upon a beautiful floor is your needs, your imagination and your investment in cold cash or weekend labor. And a beautiful floor is the 1957 consensus of an important ground-up beginning to a handsome and carefree home.

BRIGHTEN UTILITY ROOM — Large panels of glass block "borrow" daylight from the kitchen for the utility room in this modern home. In addition to the functional purpose of brightening the utility room which has no direct source of daylight, the shining glass block panels add to the attractiveness of both rooms. Impervious to moisture or condensation, the panels can be cleaned simply by wiping with a damp cloth.

Special Paints Now Made for Asbestos Siding

If you are planning to join Operation Home Improvement as are countless families throughout the country, you may wish to paint your asbestos-cement siding to suit a new color scheme.

If so, go right ahead with your plans. Authorities on home maintenance point out that although such siding never requires painting for preservation, it does take paint readily.

Before painting, however, be sure to check with your building materials, hardware or paint dealer. The siding, like other asbestos-cement products, actually is a form of reinforced concrete. As such it calls for a special type of paint, which is produced by various companies. Follow the manufacturer's directions closely.

Painting an asbestos-sided home can be well justified from an investment viewpoint since the siding lasts indefinitely. Moreover, the material's incombustibility offers an important bonus feature of fire-safety throughout the life of the house.

Ordinarily, painting is not associated with asbestos siding because the material is immune to deterioration from weather exposure and other customary causes of rust and decay. No protective coating is needed. The siding comes permanently predecorated in a choice of attractive colors.

Building Declines in First Quarter

DETROIT — Contracts for future construction in Michigan in March totaled \$101,797,000, a decrease of 41 per cent compared to March 1956, Marvin J. Brokaw, district manager of F. W. Dodge and marketing specialists, reported today.

March contracts by the major construction categories compared to the similar month of a year ago showed: non-residential at \$39,385,000, down 50 per cent; residential at \$46,464,000, down 29 per cent; and heavy engineering at \$15,948,000, down 42 per cent.

The first quarter construction contracts compared to the like 1956 period showed: non-residential at \$148,659,000, up 13 per cent; residential at \$97,266,000, down 35 per cent; heavy engineering at \$60,327,000, up nine per cent; and total construction at \$304,252,000, down nine per cent.

These Remedies May Be Applied to Noisy Floors

That harping of an old house, a squeaking floor, can be stopped in its tracks with a little care.

Floor squeaks are caused by shrinkage of wood flooring according to Home Facts. A board then will rub across the edges of another, squeaking when you step on it.

Home Facts suggests three solutions. You can apply glue if you can reach the underside of the flooring board. Liquid glue may be applied in the joint with an eye dropper.

If the squeak is located near a beam, you can fix this by driving a finishing nail in on an angle. Home Facts suggests you fill the nail hole with putty.

Graphite, a lubricant, also may be forced into the floor joints or along the edge of the board. This often will do the necessary quieting job.

Have House Clean Before Painting It

In the eyes of his fellow townsmen, the suburbanite who doesn't do his own house-painting is a plain dude. Any spring day will find a hundred neophytes perched on ladders—beautifying their homes, having fun, and saving money all in one operation.

To be effective and lasting, the job calls for more than slapping on a new coat of paint. The fresh paint must have a clean surface underneath if it is to stick. This means scrubbing the greasy, sooty, old paint with gallons of hot water and thick soap or detergent suds. A wire brush is the best tool.

One area, often neglected even by those who know that washing should precede painting, is the protected section under the eaves. Unless the film that adheres to these hard-to-reach areas is removed via the hot suds method, the new paint soon chips or peels off.

Nothing Hurts Glass

Glass, according to its manufacturers, is virtually impervious to wear and corrosion, and has probably the lowest upkeep cost of any material used in a house (if you don't count window washing).

Imaginative Use of Wallpaper Good

Wallpapers lend themselves to imaginative purposes. Bamboo-effect papers are dramatic when placed on the wall behind a blanket chest or as a background to an interesting vase or lamp. Woven-grass wallpapers can give a relaxed, south-sea-island air to furniture of simple low construction.

Hobby papers can perk up areas of the children's rooms — hunting, sailing, fishing motifs will charm any little boy. Cowboy and circus scenes are very popular.

Bright wallpaper can do wonders for the inside of closets. It has a great psychological effect on members of the family, particularly small fry, who'll be more likely to hang up their clothing when an exciting and colorful design greets them in the closet.

Replace Cellar Windows in Four Simple Steps

1. Remove old window, taking care not to damage the frame. If the framing is rotten or badly corroded, it should be replaced. Nails or cracks in wood framing should be plugged with wood filler or other material.

2. Next lay the glass blocks with mortar, making the joints one-quarter inch thick. Joints should be completely filled with mortar. Tool the mortar to a smooth finish.

3. The second step in installing the glass block is to brush asphalt emulsion, available along with the mortar from your local glass block dealer, on the inside of the frame. A good, thick coat of emulsion is essential.

4. Clean the face of the blocks of any excess mortar. Leave room at top of glass panel to allow for expansion. Caulk at sides, top and bottom to assure complete weathertightness.

Keep Bathrooms Conventional

Too many home owners are being influenced by color "fads" in selecting their bathroom fixture and tile colors, according to John R. Denst, designer and color expert. Mr. Denst says his company is appalled with this growing trend to "unusual and sometimes gaudy" color use in bathrooms.

He advised home owners to remember that color trends change. Denst pointed to the popular colors of the 1930s—orchid, green and black. Owners of older homes are faced with either ignoring these colors in tiles and fixtures or completely remodeling the bathroom.

The 1930s he says, brought popularity to magenta and the deep maroon colors. As a change they are fine, he says, but it's rather costly to completely re-do a bathroom as color preferences change.

Denst suggested using the soft pastels for bathroom wall tiles and either a light pastel or all-white for the fixtures. Then, he pointed out, it's possible to add color notes in the towels, curtains, bathmat, accessories, and other "portable" decorating elements.

The same color care should be exercised when selecting the bathroom wall-covering, he added.

There is a great trend today to use humorous, "story" wall-covering in bathrooms and powder rooms, he said. This is fine to add a note of humor to the home's decorating.

He pointed out, however, that well-designed, high-style wall-covering will retain its beauty for many years. The home owner, Denst said, is not getting the full value from the decorating dollar if the wall-covering is replaced every time the color "fads" change. Let the wall-covering color blend with the other soft pastels or neutrals used in the bathroom and you'll have a well-decorated room that can be a part of your home's decorating for years, he advised.

Must 'Box' Paint Before Using It

All paint should be thoroughly mixed to combine the solids and liquids. This mixing, or "boxing" as painters call it, is a trick that calls for care.

Unless you use paint immediately after it is shaken by machine for 15 or 20 minutes at the paint store, use this method for proper "boxing":

Four off almost all of the contents of the can—about 9-10 of the contents—into a clean empty container. Stir well the material that is left in the can. Pour back a little of the liquid and keep on stirring. Continue pouring and mixing until all the paint is back in one container.

A safety check is to pour all of the paint again into the spare can to see how well you have scraped the bottom of the can. Then pour it back again and you are ready to paint.

Snitch the Kids' Crayons

Children's crayons can be useful in fixing scratches in wood. Rub the proper colored crayon into the scratch so that it blends with the rest of the wood. Smooth the surface and then apply a thinned coat of pure, white shellac.

Practice Makes Perfect

Don't be discouraged if, the first time you use wood filler, you appear to have filled the pores in some places and not in others; a second application will take care of the spots you missed the first time.

ONCE ONLY A BREEZEWAY—The Bob Rogers of Fernberry street have a new family room that was once a breezeway. Working in spare time for nine months, Mr. Rogers laid the corkstone tile floor over the cement slab, constructed the fireplace of reused brick and paneled the ceiling and chimney in redwood. Mrs. Rogers chose a tiny floral paper for the two walls that are not

brick. Ruffles on the white curtains match the paper. Early American furniture is maple. Note the little old school desk at the right; it's just the proper size for two-year-old Cindy to use. Further plans call for bookcases next to the fireplace and a plate rail over the window. Mrs. Rogers and Cindy are enjoying a story in this picture.

Pontiac Press Photo

Quality Glass Is More Important

Quality glass without imperfections that cause distortions in a view is becoming more important as the size of glass panels increases. The value of a picture window or window wall can be seriously impaired if warpage in the glass makes a tree trunk swell and shrink and gives you a feeling of seasickness as you move past the window.

New developments in glass making have resulted in plates so near perfect that it is difficult to tell that the glass exists. Clarity of vision and reduction of reflections have been advanced to a high point.

Parallel grinding of both sides of plate glass at one time is one of the latest methods used in the production of the best glass. Formerly one side of a sheet of glass was ground and polished

and then the plate was turned over for the finishing of the other side.

Under the new process both sides are finished at the same time to eliminate irregularities that are unnoticed and unmeasurable until the glass is looked through from all angles.

Modern windows and sliding glass doors need as fine a grade of plate glass as is used for the most perfect mirrors. Since such glass features in a house are essentially in the luxury class to begin with, it is not logical to compromise on the little difference in cost between ordinary and high quality plate glass.

Know Your Plumbing

Water damage caused by a plumbing leak or other accident can be kept to a minimum if all members of the household are familiar with the location of the shut-off valves. The inside of a closet door is a convenient place to hang a chart showing the location of the valves. Baggage tags should be attached to each valve indicating its purpose.

You Can Put Your Washer in a Closet

Special-purpose closets have a place in many homes. They may be located in the kitchen, utility room or basement, and their function is to provide privacy.

If your automatic washer happens to be situated in the kitchen, porch or living room, you want to hide it from view for the sake of appearance and noise. The same is true of an automatic dryer.

Another special closet could be a photographic darkroom, perhaps built in portable style around the laundry tubs because running water is needed.

Then there's the unenclosed toilet in the basement. Making an indoor "Chic Sale" is no trick for the home handyman, working with modern tools and materials.

For any of these special-purpose closets, the principal materials needed are framing lumber and some panels of sturdy Masonite or Tempered Presdwood. They are

wear and moisture resistant and needn't be painted. However, if you like colors, they take a beautiful finish of paint, lacquer or enamel.

Right Windows Will Cool House

Short of installing a complete air-conditioning system, the average homeowner can make his house more comfortable in summer with good ventilation.

A house is well ventilated when its windows are arranged so that inside heat can escape through an opening at the top and cooler air can come in through an opening at the bottom.

Perhaps the most ideal window for this type of ventilation is the double-hung style shown in the drawing. However, windows of ponderosa pine come in a wide variety of styles which can be arranged for proper ventilation.

Among these are awning and hopper styles installed in banks of two or more. The awning window opens outward, while the hopper style opens into the room. Either of these, when installed one above the other, can be opened to permit the exit of heat at the top and entrance of cooler outside air at the bottom.

The awning window has another warm weather advantage: When open, its surface forms a tiny roof, permitting the window to be left open during a cooling rainstorm.

Sliding and casement windows of ponderosa pine also offer good ventilation. The sliding style opens at either end, creating a cooling draft as heat rushes out one side and cool air comes in the other. A casement window opens completely, offering a large opening for the passage of air.

Give Birds Better View by Making Roof Repairs

WASHINGTON, D. C. — No denying that the birds have a better view of your roof than anybody, but they don't come to your door every spring and report its condition. Be wise, then, and check up on your roof yourself. Right now is a good time to do this.

It's important to make necessary repairs promptly and to use good roof coatings and other protective materials just as soon as the need becomes evident. This will save you money in the long run. If you need to know what kind of coating is best for your roof, consult your paint dealer or roofing contractor. You can't go wrong either if you have trained roof men inspect your roof periodically so that small troubles can be spotted before they become big ones.

Roof coatings are usually grouped into several categories: fibered roof cement, asbestos roof coating, asphalt emulsion, metal roof paint and non-fibered roof coating. All these are designed for specific purposes. For this reason, care should be used in choosing the right kind of coating for the type of roof for which it was manufactured.

Flat roofs are often built of felt and asphalt. Such roofs, like all others, require periodic checks to see how they are wearing. At the first sign of cracks in the asphalt, repairs should be made. Otherwise, invading moisture will rot the felt and cause structural damage as well as disfiguration to walls and ceiling.

Fibered roof cement is a paste-like bituminous material containing asbestos fibers or other mineral matter. It is applied with a trowel. Asbestos roof coating is a liquid containing asbestos or mineral matter and applied with brush or spray. Asphalt emulsion contains fine bituminous particles suspended in water and can be thinned with water to some extent. Non-fibered roof coating is somewhat thinner than asbestos roof coating and is particularly valuable over excessively dried out old roofing.

If yours is a wood shingle roof, the shingles should be re-stained periodically. Before doing this, however, be sure to repair all leaks and replace all damaged shingles. Stain can be applied to the roof by spray or brush. New wood shingles should be dipped in stain before they are laid.

Metal roofs need special treatment, too. Before painting a galvanized metal roof, coat it with a primer made for galvanized metal. Follow this with subsequent coats of first quality, durable roof paint.

Tin-coated metal roofs are particularly subject to rust. For this reason they must be inspected regularly, kept painted and in good repair. If you're painting tin-coated metal for the first time, be sure to wipe it clean with a cloth dipped in paint thinner to remove the palm oil dressing — then paint.

While you're inspecting the roof, be sure to look at the cornices, flashings, gutters and downspouts. These can all be sources of trouble if not properly cared for.

Keeping your roof in good condition means money saved. And, in addition, consider how the color of your roof can contribute beauty to your house as well as to the neighborhood.

Workshop Patterns

This three-drawer chest has many uses a few of which are shown in the above sketch. The material used is white pine and 3/4-inch plywood in combination for the sake of economy and ease of construction. Making the frame is simplicity itself when you follow the perspective sketches on the pattern. The drawers are made out of 3/4-inch plywood with the block fronts attached by screws from the inside. Pattern 282 will be mailed for 25 cents. It is included with the Bedroom Furniture Packet of patterns for making an 18-inch chest; dressing table; Bedside Stand and Hollywood type bed. Price of packet is \$1. postpaid. The Pontiac Press Pattern Dept. Bedford Hills, New York

Hardboard Available With 2 Sides Smooth

Fiber headboards, familiar for the webbing pattern on the backs of the panels, can now be had with both sides smooth. The tempered variety is more dense than the standard hardboard and is recommended for places involving wear, high or fluctuating humidity and exposure to the weather.

This material with two sides smooth is handy for kitchen cabinet and drawer dividers, folding screens and various built-ins where both sides must be finished.

Spar varnish gets its name from having been originally used to cover the spars of sailing vessels.

Avoid Damage With New Roof

No homeowner would be happy to find he has a leaky roof, but prompt discovery of leaks can be a blessing in disguise.

First, the early discovery lets the homeowner prevent serious interior damage by having a new roof applied right away.

Second, he can choose colorful asphalt shingles for the new roof. The result will be a colorful, more attractive home, plus

a "lift" for the entire neighborhood.

Third, he can stop worrying about leaks. Asphalt shingles are durable and will resist years of harsh weather.

Why a completely new roof? Why not patch up the old one? When an old, weathered roof starts to leak, even in one or two spots, says the National Bureau of Standards, chances are that other leaks soon will appear.

A new roof of asphalt shingles usually can be applied directly over the old covering. This saves the time and labor of removing the old material and retains its insulating value.

Use Your Head to Save Your \$

Repair, Remodel and Renovate are the three R's of the homeowner and add up to three \$'s most banks are quite interested in right now.

Loans for home modernizing are often easier to get than loans for new home purchase. And to make it even easier, banks are making loan information readily available to modernization-minded homeowners.

A sampling from such data shows, for instance, that loans are offered ranging from \$500 to \$5,000 with a discount charge of only \$4.25 a year per \$100 of note, including life insurance protection. The homeowner seeking to borrow \$1,725, for example, would receive \$1,507.68 and return the money in 36 monthly installments of \$48.

But before borrowing to improve your home, be guided by these five rules:

1. Get professional advice from an architect or a building professional. These men know construction and can save your making mistakes or proceeding on a job that is not worthwhile.

2. Use quality materials. Such materials as ceramic tile for bathrooms and kitchens are waterproof and permanent. Both wainscots and floors of real tile are a lasting economy since they never will have to be replaced or remodeled.

3. Get more than one bid. You should be sure you are paying a fair price, and no more, for your work. The lowest bidder may not be the best, but his estimate will help you establish a going price.

4. Check the reputation of the man who will do the work. You can ask to see other jobs he has done to find out if he is a conscientious workman. His bank, or yours, can tell you how long he has been in business.

5. Check to see if the project will add to the resale value of your home. The best repair and remodeling work makes daily living more satisfactory for the whole family, and at the same time adds to a house's value.

Test House Plan on Paper Before You Build

Test the room arrangement of any house plan in this manner:

Take several clippings or tracings of the plan and with a pencil draw lines through the house to show the path traveled in each of these incidents in family life:

1. Johnny comes to breakfast and then goes out to play.

2. Johnny brings in a friend to use the bathroom.

3. Mom takes the sheets from the beds to the laundry.

4. Pop brings wood in for the fireplace.

5. Johnny cuts his finger and runs for the medicine cabinet in the bathroom.

6. Pop, working on the car in the garage, needs something out of a pocket in a suit in the bedroom closet.

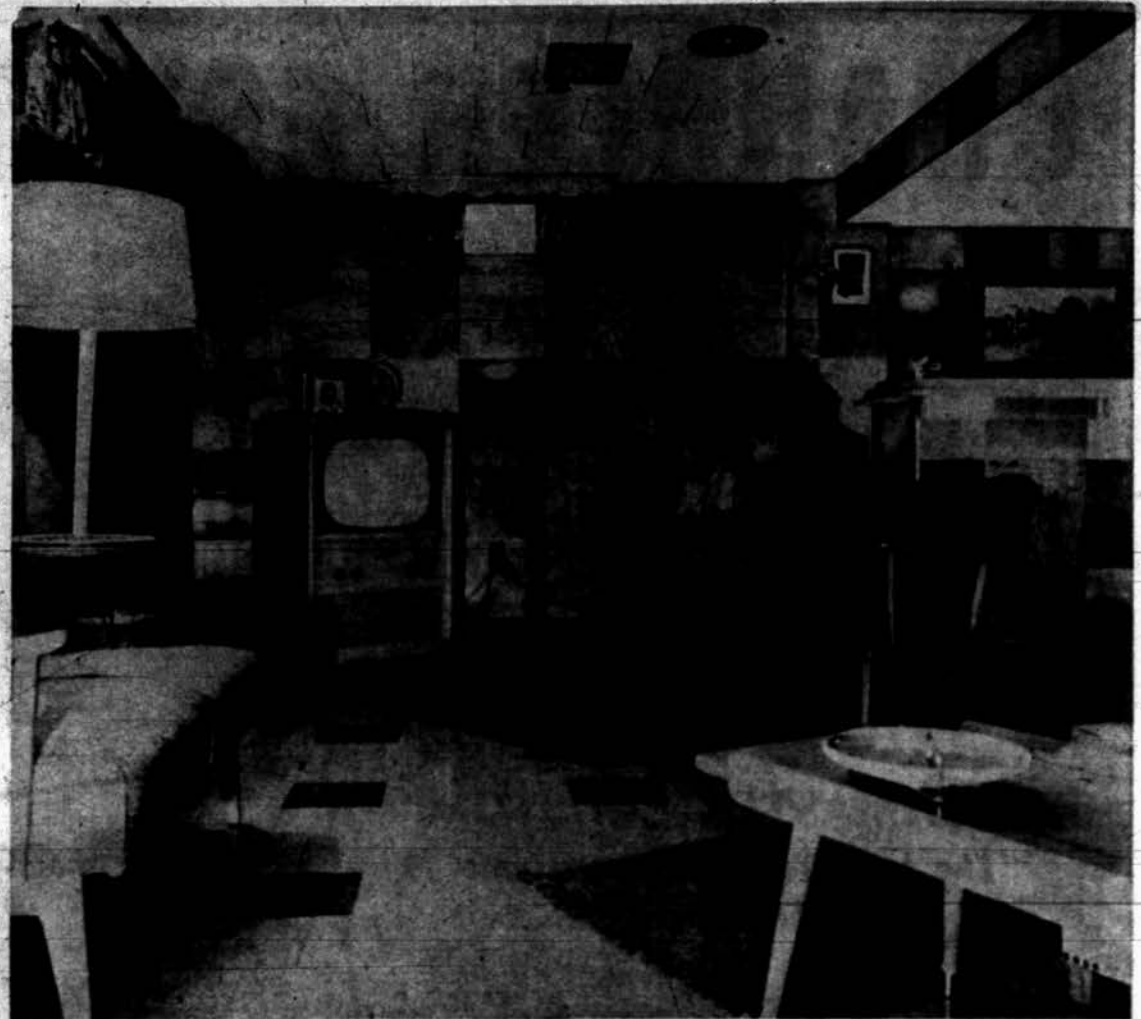

7. Mom is making beds when a delivery boy arrives.

8. A neighbor comes to borrow some plates in the dining room buffet.

9. The dry cleaner arrives with Pop's Sunday suit. And so on.

If your pencilled lines have not made your living room look like a tracer map of Times Square, you have a good plan.

To help assure the lifetime serviceability for which oak floors are noted, install them only after the plaster work has dried.

FAMILY LIVING CENTER — Craig and Charles Wesley, sons of Mr. and Mrs. Charles Wesley of 85 North Ardmore street, watch television in their new family room. Since its transformation from a once "useless" basement, the family has practically lived there, according to Mrs. Wesley. The walls are covered in parquet birch

with a few portions of plain birch paneling. The floor is asphalt tile. Two large closets and a lavatory were added near the room and a new grade door installed. Modern furniture in light colors make this room a pleasant addition to an otherwise satisfactory home. Bob's Building Service did the construction work.

Pontiac Press Photo

Count the Hours It Will Take!

It's always a good idea to know what you're getting into before you start on a project. For example here's a case of a reader who has a house with the interior woodwork finishing with a dark stain followed by several coats of equally dark varnish.

His idea was to remove the varnish, bleach the wood to a lighter color and then give it a nice light natural finish. He started by stripping off the three coats of varnish with a varnish remover. After this he applied the bleach and at last reports he's still sanding the wood to get it smooth.

So far after three months' work he's done the trim around one door and at his present rate he should have all the woodwork refinished sometime early in 1967 or maybe late in 1966. In other words, this business of refinishing woodwork is a big job.

If we had a lot of dark woodwork and we wanted a light colored woodwork we would do one of two things. We would either give the surfaces a light sanding and apply paint or we would rip out the old woodwork, sell it for what we could get for it and apply fresh new wood.

This might sound expensive but if you figure the time it's going to take to strip off the old finish and apply the new finish to the old wood plus the cost of the paint remover required for this job, you find that there won't be very much difference in cost. Of course, painting over the old finish with a light paint is the least expensive remedy and if done properly can make a mighty handsome looking finish.

Clothes Closet Easily Lined With Red Cedar Kit

An easy project for long weekends is cedar-lining a clothes closet. Installing a cedar closet will pleasantly occupy the time and will result in a practical and beautiful addition to the home.

Handy packages of tongue-and-grooved aromatic red cedar closet lining are available at lumber yards everywhere. Each package contains enough of the aromatic, rose-colored wood to cover a least 32 square feet of wall area.

Before applying the cedar to the closet walls, remove all shelves, hooks, clothesbars, baseboards and other protrusions. Locate wall studs with a stud-finder or by drilling small holes, and indicate their location with vertical pencil lines.

Start at the bottom and work upward, fastening the boards to the studs with small finishing nails.

No paint or varnish should be used, since that would seal in the valuable moth-repelling cedar fumes. Quarter-round cedar molding in all floor, wall and ceiling junctions will give the closet a finished, professional look.

Two-Headed Nails Can Be Removed

Two-headed scaffolding nails have settled a feud between the turpentine and lumber industries. Workers who nailed metal spouts on pine trees to direct the flow of gum for turpentine used to leave

the nails and spouts in the trees.

Lumberjacks then had to leave stumps of 3 to 8 feet of the best part of the log because that much lumber was not worth the damage the nails caused to saws in the mills.

Between 1,500 and 2,000 kegs of two-headed nails are now being used yearly by turpentine farmers.

Oak Floors Help Warm House

In building a basementless house of the crawl space type you can help assure adequate floor warmth and dryness, as well as beauty, by specifying floors of oak or other attractive hardwood, builders say.

Such floors are particularly desirable in a basementless home because their insulating property enables them to retard heat loss to the cold area beneath the house.

When a building is constructed over damp ground, however, a special precaution is recommended regardless of what type of finish flooring is employed, the experts point out.

They say that damp soil should be covered with such material as roll roofing, laminated paper with waterproofing material or thin metal foil, all of which are inexpensive. The cover need not be cemented, lapped or fastened down.

The warmth and dryness of hardwood floors also make them highly desirable in homes erected on concrete slabs laid directly over the ground. More and more builders are utilizing them in such houses because they aid greatly in overcoming the problems of floor coldness and dampness often associated with slab construction.

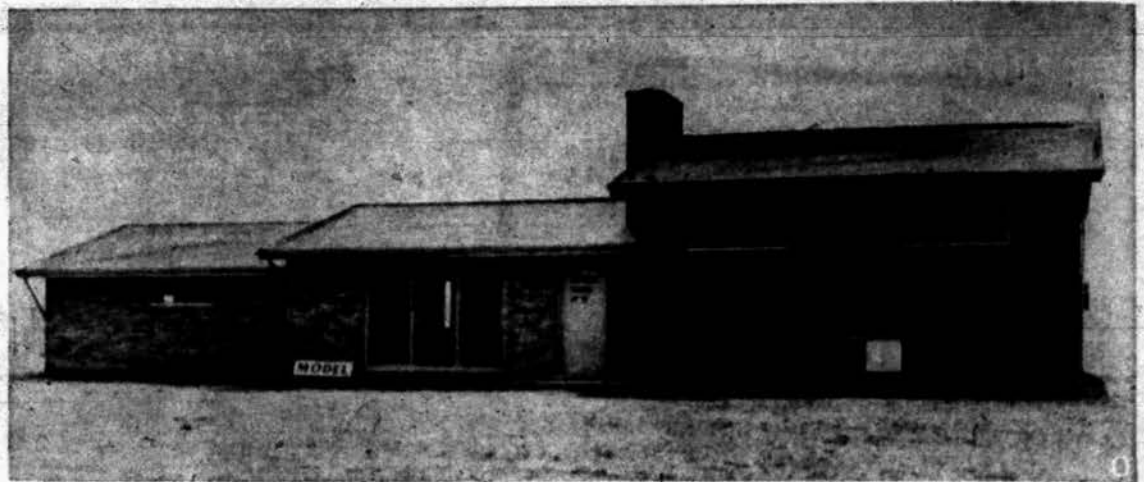

In homes with basements of course, floors of hardwood have long been an overwhelming favorite. Installed in accordance with approved methods, they provide a lifetime of beauty and service. Air drying and scientific kiln-drying during manufacture render them adaptable to humidity conditions inside a house with a minimum of expansion and contraction.

Screwdriver Only Tool Needed to Convert Lock

Any mortise type lock or latch can be converted into a modern cylindrical lock with keyhole in the doorknob by a new locking doorknob that takes the place of a present knob.

It is installed with nothing more than a screwdriver. The outer knob spins freely when locked and offers no means for tampering. The entire lock is attached on the indoor side. No cutting, drilling or chiseling is needed.

Oak flooring especially well suited for remodeling is now available in a choice of four grades of prefinished stock. The grades are classified as Prime, Standard and Better, Standard, and Tavern.

ON PONTIAC TRAIL — A model home that will be duplicated on the buyer's lot for \$23,500 is open at the corner of Pontiac Trail and Welch road. Built of brick and cedar shakes, the house has a partial basement. In the living room there is a brick fireplace with the brick reaching to the ceiling. In the 9x21 kitchen-dinette the

range and oven are built in. Folding door closets, a bath and a half and an attached two-car garage are other features. In the rear of the house there is an 8x24 roofed patio. Haines and Powell of Detroit did the building. Hoeft Real Estate of Walled Lake is handling sales.

Plastic Wall Coverings Come in Varied Styles

Handwriting on the wall doesn't alarm the modern homemaker. The handwriting can be washed off, if she uses new plastic wall coverings.

These newest man-made materials combine beauty, durability and luxury styling.

But there are still wall coverings it's best to keep guarded from crayon-wielding youngsters. One of these is the wallpaper mural, making a big bid for return to home decoration. And Grandma Moses, at 96, is right in front with her pictorial scenes of Americana.

Another interesting, textured wall covering comes from the Orient. It is a Japanese woven paper. With a process 1300 years old, the Japanese make wallpaper of paper mulberry tree bark or of rush matting or a grass called gampi. With a nubbled surface, it resembles hand-woven cottage fabrics.

A scrubbable Ultron vinyl plastic wall covering is applied like regular wall paper with the addition of an adhesive to the wheat paste. Designed by Monsanto, the covering can be ap-

plied to flush doors and furniture with flat surfaces.

A nursery wall is waterproofed with triangular plastic tiles installed in alternating vertical rows of turquoise and yellow. Con-Tact is another aid to easy homemaking. The self-adhesive Ultron vinyl plastic started a national stick-it-yourself trend.

Wallpaper murals, meanwhile,

provide a sense of space that isn't there. A mural can make a short room look longer or a narrow room look wider. And it can play tricks with ugly wall obtrusions.

Since these murals are printed on canvas, they can be peeled off and moved to another room or another apartment.

Varnish Dries Smooth

A flowing varnish is designed to produce a smooth surface without rubbing or polishing. It must spread evenly and smoothly, must not "set up" too rapidly and, when dry, will present a lustrous, tough surface, free of brush-marks.

Carry Boards Right to Stop Bouncing

There's always an easier way to do things.

Ever notice how a long board bounces when you carry it on your shoulder—and how it slaps against shorter boards when you carry a variety of lengths at a time.

Carpenters exchanging tips through the American Builder Magazine, their trade publication, suggest carrying shortest boards next to the shoulder with the longer pieces on top.

This eliminates the bouncing.

CHANDLER ESTATES — The first residents have moved into Chandler Estates and will have plenty of time this spring to get their lawns and gardens in order. The three-bedroom homes have oak floors, birch cabinets in the kitchen and large

utility rooms. Selling at \$12,850, the houses have been built by Nosan Building Corporation. Buyers have a choice of four elevations. Models are located on Pontiac road, east of Opdyke.

Electric Tools Ease Upkeep

Whether you live in a one-room apartment or a 10-room house, basic know-how of home repairs is today practically a necessity of life.

Every workshop should be equipped with at least a minimum number of basic and often-used hand tools. These include a folding rule, a steel rule, screw driver, hammer, pliers and wrench. You may also wish to have on hand a selection of files or chisels, a plane, heavy duty shears, a level and a T-square.

From time to time, add tools for any specialized needs, as they arise. In this way, you will place greater value on them and get to know them better.

The chief power tool for work around the house is the quarter-inch electric drill, according to a spokesman for Cummins Power Tools. It is the workhorse of every shop; the more you use it, the more uses you find for it.

The best buy for those just getting started in power tools, Cummins advises, is one of the new "tool organizer" drill kits. Included are a quarter-inch drill, an assortment of bits, and a variety of drill attachments.

These enable you to do a number of jobs electrically: sanding, polishing the furniture or silverware, mixing paint, scraping rust from metal surfaces, and sharpening tools and other cutlery.

The equipment comes in its own metal case, with a slot for each piece to keep everything handy and neat.

Give in to That Urge to Paint Everything

WASHINGTON, D. C. — Suddenly it's spring, and the sharp eye of the alert homemaker sees all the dark traces left by Old Man Winter during his long stay. Spring fills us with a desire to be surrounded by newness and freshness. One of the best ways to satisfy that longing is to go on a painting spree.

You will probably want to paint your house from ridgepole to cellar, once you get started. And, of course, this is possible if you allow yourself plenty of time to plan. The wisest approach to a major painting overhaul is to consult with a reliable painting contractor, and let him do the big jobs that are not only out of your reach but require more time.

Most contractors have payment plans to cover the cost of an over-all job. Or, if you prefer, you can apply for an FHA loan. It is now easier than ever to obtain help in financing home improvement.

But to satisfy your own personal painting urge, you can start right away to refinish your porch and garden furniture and the porch floor and steps, as well.

Outdoor furniture, being subject to the whims of the weather, benefits from a new paint coat each spring. Before you apply any paint, however, make sure that all surfaces are clean and dry. Remove every speck of rust from metal surfaces, then coat the bare metal with primer specially made for the purpose.

New wood should first have an undercoater applied to its surface. Then, all cracks and nail head indentations should be filled with putty. Level the sur-

face, as you work, and you will have a minimum of sanding to do.

If you want to make a decided change in the color of your furniture — particularly from very dark to very light hue — it's wise to apply an undercoat before you begin with the new color. If last year's coating is still glossy in spots, rough it up slightly with sandpaper to provide a good base for the new coating.

As for the type of paint to use, ask the dealer for exterior enamel, trim-and-trellis paint, or even farm and tractor enamel — all excellent for the purpose. Don't use exterior house paint on furniture — it will eventually chalk and come off on clothing.

For a transparent protective coating, use spar varnish, which is the same type coating used originally on spars of sailing ships to protect them from weather damage.

Prior to the actual painting itself, assemble all the tools and accessories you will need — sandpaper, putty and putty knife, paints, stirring paddles, a can opener, paint thinner, rags and brushes. This way, once the painting gets started, you can zip through it like a professional without distraction.

As most concrete blocks are hollow on the inside, don't use a bolt which will hold in spite of the masonry anchor to fasten objects to the block. Rather, use a toggle block being hollow.

IT'S ALL VERY, VERY simple. This man is Donald Olsen. He lives in Portland, Conn. And he's wallpapering the outside of his house. He's going to do it again next year, too, in a different pattern to prove the durability of waterproof, plastic-coated wall coverings. His wife was unavailable for comment.

Neighbors Can Tell What Taxes May Be

A builder rarely can give you an accurate idea of what your

taxes will be when you buy a new house. Very often you will ride along for the first year on taxes on the land only. Then, unexpectedly, comes the day of reckoning. Ask owners of homes nearby, or ask the tax assessor. Although real estate taxes are

deductible on your income tax return, they still have to be paid when due.

Your flowers will appear even more beautiful when displayed in boxes painted in bright gay colors.

Brighten or Dim Lights

Home lighting can be dimmed or brightened much in the manner of stage lighting control. New dial type switches can give you modulated light in any room —

bright for reading or entertaining, soft for relaxation and conversation. Rheostat principles are incorporated in each light switch. But all dial switches do not provide for dimming. Some merely turn lights on and off silently.

Pontiac Press Photo

Renovation, Good Decoration Increase Value of Homes

If your home gives you a headache, you aren't alone.

In 1956 more than a million homes were built. A national survey showed that for every new home put on the market, there were two "old" homes sold. In fact, sale of used homes was up 35 per cent over 1955 sales.

But for every one million permanent homes built each year, 200,000 persons take to living on wheels. Nearly 3 million Americans have mobile homes some with air conditioning, TV, automatic dishwashers, garbage disposals, wall-to-wall carpeting, picture windows and stall showers.

Why would persons willingly face problems of remodeling older homes? Real estate officials say families believe it's a practical investment to modernize an old home.

Many would rather remodel than build because: Used homes probably are near places of employment; are in built-up communities and have schools, parks, finished streets and sidewalks.

Decorating may be the key to your home headaches. Studies now show your home can depress you if it has wrong colors, poor arrangement of furnishings, wrong selection of items that don't fit you.

New homes are going up in the U.S. despite the ready sale of old homes. Witness the mushrooming of small communities along any major highway.

Many housing developments are prefabricated villages. It is estimated one of every 10 new homes today is factory-made.

These new homes have great leeway in price and choice of designs. Costs range from \$3,500 upwards to \$50,000.

Whether you buy to remodel or to build your most extensive room will be the kitchen and bathrooms.

A 9x10 kitchen, fully equipped, costs about \$1,750 or \$19.50 a square foot. A 7x8 bathroom, fully equipped, costs about \$2,000 or \$35 a square foot.

Most home owners want at least one and a half bathrooms. Two is preferred, especially in the average family of 3½ persons, a survey revealed.

Renter or owner, you have a mutual problem—how to furnish or dress up your home.

Interior decorators say the average man or woman needs more courage in decorating a home. Be brave and express yourself to make your house a home, they say.

Manufacturers help considerably. Most offer services of color consultants, interior decorators and home furnishings stylists.

If you want to add a lift to an old room, they'll tell you in their literature how to apply plastics

to your wall, floor or table top. Or they'll tell you how to lower a high ceiling with a coat of dark paint. This darkened ceiling method also may be used to hide ugly pipes in a basement recreation room.

You can tile a floor or bathroom wall as easily as doing a jigsaw puzzle.

★ ★ ★

Pushed by heart experts and weary housewives, companies are marketing washable wall coverings in stylish textured designs. Floor coverings with new fibers are said to resist dirt more. Use of high and low loops in carpets and rugs add detail while combating wear and tear. Some new curtains withstand deterioration from sunlight and industrial gases.

Kitchen appliances with a squared look are designed to fit homes already styled for built-ins. On a budget, you can buy a single free-standing kitchen appliance. The new squared look fits snugly into your built-in setup. Many manufacturers offer these units in their full line, from most to least expensive.

The industry is wooing housewives by solving space problems. This is done with (a) ovens built into the wall, (b) stacked washer and dryer units, (c) combined refrigeration and freezer units, (d) surface cooking units. Compactness is the key.

Biggest problem facing many in homes dating to the early

1940s is inadequate wiring. More and more electrical home aids suck at your power. Better check your wiring to see you get peak performance from equipment. Your local utility probably can help you do this or see an electrical contractor for wiring advice.

Keeping your home in repair is just as important as putting new appliances and furniture in it. It adds value to your home.

How to Use Pattern in Room Decoration

Choose a carpet in a distinctive design, and pair it with textures and simple lines in the rest of the furnishings, so that one bold element gives character to the room.

Or reverse the procedure, and choose a subtle carpet design. Combine it with scenic wallpaper that captures attention, or with draperies in bold pattern. Color combinations can be taken right from the carpet.

Today's carpets come in so many hues and patterns, they blend with any decorating idea—and can be an accenting or subdued partner to the rest of the room.

If a large-scale pattern is used on the wall or floor, then complement it with an interesting texture or quiet stripe elsewhere—in upholstery or draperies.

Home Workshop

by Ruth Wynn Spence

A CEMENT BIRD BATH may be made with a mould constructed of lath and lumber. Pattern 227, which shows each step and gives concrete formula, will be mailed for 25c. If you do not have your Spring bird houses made, a Bird-House Pattern Packet of 10 different designs also is available. Price \$1. The Pontiac Press Pattern Dept., Bedford Hills, New York

Stubborn Drawers Respond to Sanding

A stubborn drawer sometimes needs sanding to reduce friction. Use medium-fine sandpaper. Rub marks will show where sanding is required.

A turpentine-moistened rag will remove wood dust and grains of sand. Topping with a coat of shellac will provide zippy action.

Fireplace Adds to Home Cheer

Leave it to architects. Now they are saying "home is where the hearth is."

The first man to build a fire has long been forgotten. And so has the first to build a chimney—to make the fireplace go.

But architects like Arnold Schaffner of Chicago are reviving fireplaces in dramatic ways.

Schaffner believes a fireplace fills a basic human need for warmth and cheer. It becomes a gathering place and we all draw near it.

Today's trend for more family and social activity in the home is an added reason for fireplace interest. Schaffner has designed some fireplaces as room dividers. Others become the walls of a room.

The new "island" fireplaces are placed to form the hearth fire for living-recreation area with the reverse side utilized as a barbecue in dining-kitchen area.

Now Schaffner is building a house around a fireplace as was done in ancient times. The house is split level. The island fireplace is the dividing unit between upper and lower levels.

UNUSUAL ENTRANCE—A year-round planter which extends from the interior to the exterior through a panel of random clear glass block transforms the entrance to this home from the prosaic to the glamorous. Resembling the bull's-eye glass of Colonial days, the panel provides

striking background for both the inside and outside sections of the planter. Possessing the insulation value of an eight-inch brick wall, the panel protects interior plants from sudden changes in temperature. The interior is at the left, the exterior at the right.

Fibre Rug May Be Best

The apartment dweller who hesitates to invest in carpeting may change his mind when he looks over the range of fibre rugs available today. In the fibre rug he will find style and beauty at a price reasonable enough for any budget.

★ ★ ★

Families who rent their homes—and in the United States, some 40 per cent do—have problems that the typical home-owner may never face. For the renter is a mover as well; he generally does not plan to remain in the same leased home for the remainder of his life. Latest statistics show that, during a given five-year period, the equivalent of almost the entire population of the country moves from house to house.

This means that the renter's floor coverings must be more than functional; they must also be adaptable for any home to which he might move. They must be more than attractive; they must also be durable. They must be more than portable; they must also be rugged enough to withstand the damaging effects of moving. Above all, they must be inexpensive; for what renter likes to invest heavily in floor coverings he may use only a year?

The fibre rug meets all these requirements exceptionally well. Woven of tough, twisted cords of kraft fibre, which are sometimes blended with wool and rayon-acetate yarns for special effects, fibre rugs provide a soft, comfortable floor covering for any room. They come in many sizes and can readily be fitted to smaller or differently shaped rooms. In addition, most patterns are reversible; if one side becomes scuffed or stained, the rug can be flipped over for extra wear.

RUGS AID SILENCE

Soft and comfortable underfoot, fibre rugs help prevent annoyance to tenants who live below by cushioning footsteps. A number of landlords believe this to be so important that they now require soft floor coverings for all apartments. In motels, rooming houses and furnished apartments, too, fibre rugs are often used to soften the sound of foot traffic and to protect the floors from heavy wear.

To most renters, one of the most appealing things about a fibre rug is its price. A good quality 9'x12' rug can be obtained for as little as \$23. Some patterns and styles are a little more expensive, but even the type that combines kraft fibres

with wool-rayon-acetate strands costs less than \$50 for the 9'x12' size. This reasonable price may look particularly attractive to the renter who intends to have his own home some day—especially when he realizes that he will be able to use his fibre rug in any room of his house, when he eventually settles down.

To move or store a fibre rug, simply roll it up. There are no tacks required to hold it down, no special wrapping or moth-proofing treatment needed, and no crushable pile to worry about. Should the rug be soiled in transit, it may be easily and safely "shampooed" with the soapless suds of any well-known liquid detergent.

Ordinary care for the rug is easy. Since dirt can't be trapped in the napless weave, it can be quickly whisked away with broom or vacuum cleaner. Even when a

fibre rug suffers irreparable damage, it isn't a real catastrophe, since the rug wasn't expensive to begin with.

A fibre rug can be found to fit the dimensions of almost any room. One of the leading manufacturers, Armstrong Cork Company, makes Deltex fibre rugs in all standard sizes from 27"x54" to 15'x15', and most patterns up to 50 feet long in broadloom widths. Even wall-to-wall sizes are obtainable on special order. Latest innovation is the oval fibre rug, which is especially attractive with certain room arrangements.

For their long-lasting beauty, for their comfort, and for their easy-to-take price, fibre rugs are being recognized by growing numbers of tenants as the floor covering that best meets all needs for the rented home.

Focus Attention on Good Points With 'Blackout'

A dramatic method of effecting architectural changes with paint is the "blacked-out" ceiling.

Margaret Hutchison, color stylist for the Martin-Senour Paint Co. in Chicago, says the technique, used with proper lighting, focuses attention on the lower "living" area of a room.

It can be used in basements, playrooms, kitchens, bathrooms and other spaces where repapering is required, Miss Hutchison adds. The "blacked-out" ceiling can:

1. Swallow up an unsightly clutter of pipes, ducts or other intruding structures.
2. Scale down the proportion of a cold and barnlike room structure to the size of the people in it, making it more intimate and livable.
3. Focus and direct attention to the products, furnishings or people in the room below.
4. Extend the apparent length and breadth of a small room by reducing the vertical, boxy effect.

Lasting Impression Set in Entranceway

No one lingers long in an entranceway, but the impression it makes is usually a lasting one. It needs lively patterns and pleasing colors that say a bright "hello" to visitors and spark their interest in the home.

If the entrance is long and narrow, a plain light color, such as green or blue, will make it seem wider. A grouping of three or four pictures on one of the walls will draw the eyes and make one forget the length of the passage. And do not feel that the colors used there have to be the same as those in the living room — unless of course the hall opens into it.

The entrance should not be a catch-all for discarded furniture, put Grandma's Victorian table in the hall. Instead, use a piece that fits in with the decor of the rest of the home.

The closet off the entrance should be kept free of accumulations so that guests can use it readily. If its walls are painted a light warm shade such as salmon or sunny yellow, it won't suffer from a dungeon-like atmosphere.

Mahogany Has Beautiful Grain

Mahogany is the grandma for famous names of wood figures or grain patterns. Crotch, swirl, mottle, broken stripe, and fiddle-back, to name a few, were first used to describe mahogany, the wood in which the many beautiful figures first became known.

Although there are countless variations in mahogany grain patterns, approximately 40 have names more or less standardized that are most widely used in furniture making. They are the accepted standards for describing and specifying mahogany veneers.

Until now, the two most familiar types of mahogany grain patterns have been the proverbial ribbon stripe and the flat-cut cathedral or inverted V pattern. Variations within the two types include the narrow quartered stripe, sometimes called a "pencil stripe"; the leaf design or inverted V of flat-cut patterns with either wide or narrow hearts. Although beautiful when compared with most other wood grain patterns, these two conventional figures are among the plain types of mahogany figures.

Style-conscious homemakers with an eye to elegance may be aware of some, but not all of the more beautiful mahogany patterns. Most famous of these and perhaps best known, is the crotch mahogany figure. Not too well known is the variety of crotch styles found within this family of beautiful mahogany figures.

Strangely enough, the famous mahogany crotch comes only from African mahogany trees and even so, only a few trees produce merchantable crotches. To be acceptable, tree trunks producing crotches must divide into two limbs of about equal size. This is the exception rather than the rule.

The "burning-bush" mahogany crotch is considered by many as the most beautiful grain pattern in the world of wood. Its name comes from the appearance of a bush seemingly on fire. Another striking crotch pattern is the "feather crotch" which, as its name indicates, suggests the feathery appearance of soft, silky plumes.

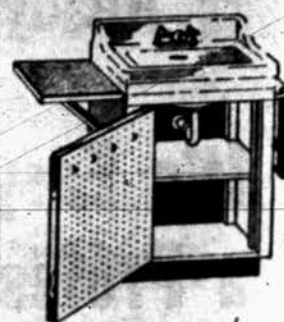

Leave Floors Bare

Home decorating authorities are recommending more liberal use of exposed softwood floors because the warm tones and colorings of natural wood blend so well into modern color schemes. Neutral wood shades of popular west coast hemlock and Douglas fir flooring serve as a perfect starting point for color planning and decorating in each room.

An enclosure for a lavatory not only will enhance the appearance of the bathroom but will provide additional storage space.

In the plan illustrated, the inside of the door is faced with a Masonite "Peg-Board" panel.

Various items can be stored on it by means of metal hooks and fixtures which fit into the various holes. Both the perforated panel and fixtures are available at lumber yards.

The "Peg-Board" panel serves also to keep the enclosure ventilated.

Sides and bottom of the cabinet are Masonite Tempered Presswood, a material which withstands wear and the high humidities of bathrooms.

Choose Your Way to Pay the Bill

If you want to modernize your bathroom or kitchen and don't want to part with the price in one lump sum, there are six ways you can pay the bill in easy payments, says the Plumbing & Heating Industries Bureau.

- (1) Your bank will make a low interest loan on proper security;
- (2) Your dealer may be able to arrange time payments;
- (3) Your mortgage may be refinanced;
- (4) An open-end mortgage may be extended without increasing monthly payments;
- (5) Open-end mortgages often allow for small increases in installments;
- (6) the FHA will insure a loan for home improvement.

6 REASONS WHY YOU SHOULD USE Ready-Mixed CONCRETE

HIGH QUALITY

Ready-Mixed Concrete is of high quality, accurately proportioned at a central plant with modern batching equipment. Each batch is designed for your specific job and is thoroughly mixed to insure concrete of uniform quality, durability and high strength.

CONVENIENCE

Ready-Mixed Concrete results in maximum convenience on the job. You don't have the problem of estimating the quantities of cement and aggregates required. You save the time, trouble and hard labor of handling and mixing materials. It does away with stock piles of aggregates and stores of cement that take up space on the job site. And, too, there's no cleaning up of excess materials upon completion of the job. A phone call will bring the concrete to your job, and in many cases, it may be placed directly into your forms.

SPEED

Ready-Mixed Concrete avoids delays in placing operations because it is delivered when and where it is needed. It is ready to deposit in your forms immediately upon delivery, often without re-handling, thus speeding up operations. The exact quantity of concrete needed is delivered directly to the job site—construction crews lose no time in waiting to start or finish a job.

ECONOMY

Ready-Mixed Concrete is economical. And big-volume efficiency methods mean low costs . . . even small jobs get the benefit of large-volume production. There's no waste — for concrete is delivered in the exact amount desired — no wasteful left-over materials, no costly reordering. Neither is it necessary to rent or purchase a mixer. You know what the concrete for your job will cost because the price is quoted before the concrete is delivered.

DURABILITY

Ready-Mixed Concrete is durable. It is scientifically designed and properly mixed to insure the quality desired for specific jobs. Too much water in the mix causes a loss in strength and durability. Skilled concrete technicians at ready-mix plants determine the amount of water to be added to the portland cement and aggregates. The amount of water used in mixing *Ready-Mixed Concrete* is always right for good durability.

DEPENDABILITY

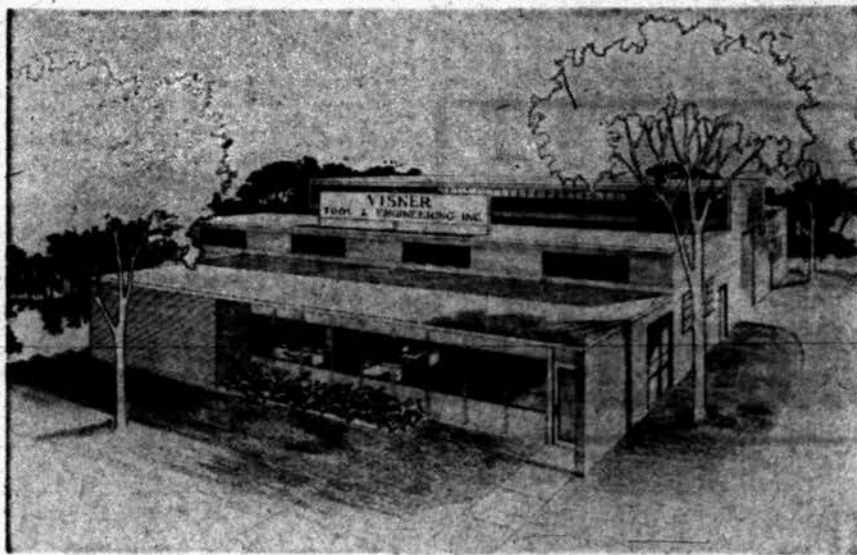

Ready-Mixed Concrete is dependable because there is full strength and uniformity in every load. With modern precision batching equipment, each truckload coming to your job is alike and exactly as you have specified. This makes it possible to obtain uniform strength and appearance in the finished work. You can depend upon *Ready-Mixed Concrete* to be available where and when you want it.

ROCHESTER TOOL COMPANY—This artist's drawing shows the new home of Visner Tool and Engineering Inc. of Rochester. Located on a two-and-a-half acre site at 210 Campbell Street,

the brick, steel and cement block building is scheduled for completion the latter part of May. Smith and Andrews Construction Company of Detroit are the builders.

Visner Tool Has New Building

Visner Tool and Engineering Incorporated, makers of large manufacturing tools and dies, are scheduled to move from headquarters in Troy to their new home in Rochester. The brick, steel and cement block building at 210 Campbell St. will be completed the latter part of May.

Frank Visner, father of Orrie Visner who is now president of the company, founded the organization in 1949, at present the firm employs about thirty people.

Ten thousand square feet of manufacturing space and fifteen hundred square feet of office and engineering space are included in the new building. It is located on a two-and-a-half acre site. Smith

and Andrews Construction Company of Detroit are the builders.

Incinerators Will Chew 'Most Anything

Indoor incinerators are developing chewy appetites. Modern units are equipped to handle everything from ham bones to twigs and grass clippings.

Many cities are urging citizens to install incinerators and household garbage disposers because of increasing hauling, dumping and filling costs and less availability of dump land.

Store Game Boxes on Special Shelves

A special game shelf in the living room bookcase will get more mileage out of the family game library. When family or friends are in

the mood for fireside competition, you can pick the right game from the shelf. This eliminates a closet scramble.

Game boxes are so colorful, nowadays, that they are just as decorative as books when neatly piled.

Wood Joins Foam Rubber

Plastic molded or contoured laminated wood shells are frequently the springless support for today's modern chairs — spongily soft, nevertheless, because of the foam rubber cushioning employed. One designer, a pioneer in the use of many such modern improvements, has recently introduced a combination of present and past; molded plywood, cushioned with pads of the past's favorite comfort-device — down and feathers.

Yachtsmen at Grand lake, Colorado, claim the highest anchorage in the U.S. at 8,369 feet above sea level.

The United States is the biggest consumer of soft floor coverings. In 1956, the U. S. carpet industry produced and sold over one billion square feet of carpet—an all-time record.

Thrifty homeowners everywhere are installing average water softeners . . . the brand that stands for quality and dependability.

It's an investment that pays off in savings on soap bills, washable fabrics, water heating costs and plumbing repairs. Home economists estimate up to \$500.00 savings per year for the average family.

A Bruner softener with famous "DOWEX" Lifetime Mineral not only softens, but removes iron and sulfur, too! Find out how much your family can save while enjoying the luxury of Bruner Soft Water.

KITCHEN VENTILATING HOODS

30" Copper or Aluminum Enamel with Blower, Light and Switch

Only **\$45⁹⁵**

Every home needs good ventilation in the kitchen to keep air fresh . . . to prevent greasy film settling on the walls and furnishings . . . and to get rid of offensive odors before they can circulate into other rooms of the house.

When you choose a NuTone Hood Fan . . . you can be sure you have the most modern, most efficient kitchen ventilating system. Here's why:

1. The NuTone Hood traps all hot, greasy odors RIGHT OVER THE COOKING ZONE.
2. The NuTone Fan exhausts these cooking odors faster . . . by changing the air 33 times a minute.

NuTone's Hood Fan acts like a huge vacuum cleaner in the kitchen . . . it pulls out odors, grease, moisture, and excess cooking fat. It prevents damage to cabinets and walls . . . saves costly redecorating . . . furnishings stay white and bright. No peeling paint, rust or mildew due to excess kitchen moisture.

Pitched Roof Aids Cooling

Air conditioning is more effective and less expensive to operate in a home with a pitched roof, according to a leading research engineer in the field of home cooling.

"The larger the air space in a well-ventilated attic, the greater the protection from outside heat," says Prof. John R. Watt of the mechanical engineering department of the University of Texas. "Flat or shed roofs have virtually no protective air space."

"Doubling the amount of air space in the attic reduces heat absorption into the living areas by 75 per cent."

This air space, combined with thick mineral wool insulation in the attic floor, reduces penetration of overhead heat so efficiently, Professor Watt says, that smaller air-conditioning units can be used and cooling costs are reduced by as much as half. For complete protection against summer heat, mineral wool also should be installed in walls and living area floors.

A properly ventilated air space under a pitched roof acts to reduce heat radiated from the roof, light-colored asphalt shingles, off surface heat to carry it out doors through the vent openings.

Many architects and cooling engineers advise light-colored asphalt shingles for the roofs of air-conditioned homes, since a light surface reflects more of the sun's rays. Asphalt shingles are available in many light colors to satisfy the individual tastes of most home owners.

The combination of a pitched roof, light-colored asphalt shingles, ventilation and thick mineral wool insulation is effective in reducing overhead heat in any house, air-conditioned or not.

Grooves in Wood Make Runners for Shelves

It seems that there is a type of plywood known as "Texture One Eleven" and this is a 1/2 in. thick plywood with grooves cut into it. One size sheet has these grooves cut 2 inches on center. The other has them cut 4 inches on center. The grooves are 1/2 in. wide and 1/4 in. deep.

Now this type of plywood was originally designed to use as paneling with the grooves running vertically but if you set them vertically you have nice little runners for shelves.

The sheets of "texture one eleven" come 16 and 32 inches wide. What you do is to decide how wide you want the shelves to be and then you cut strips from the panel to this width. Then you set up the side pieces for your shelves and nail these strips to the side pieces with the grooves in the plywood running horizontally.

Just be sure that the grooves on each side of the shelf are in line with one another. When you've got the sides up, simply cut some sheets of 1/4 in. or 3/8 in. plywood and slip them into place so that the ends will fit into the grooves.

You'll end up with a set of shelves that can be easily adjusted to any height you want and you'll seldom run across a job that requires less effort or less skill to build.

Clean Stove Parts Easily

For the first time in history, the most functional parts of a gas range can go into a dishwasher! Yes, a stove designer has produced a model featuring burners that can be taken apart and sudsed clean in either an automatic dishwasher or a dishpan.

TECHBUILT HOUSE — Max A. Hartwig, realtor in Rochester, recently opened a new model home in Waverly Woods subdivision. Built by O'Connor Construction Company of Oak Park, the two-story home has a number of unusual features. Techbuilt homes provide flexibility in room arrangement since none of the

interior partitions is a supporting member of the house. This model has four bedrooms, a family room, 2 1/2 baths, built-in kitchen utilities and an attached two-car garage. The model is open daily on Rochester road at Meade road, one mile north of Rochester. The price is \$24,850 on your lot.

House Plan Is Flexible

A house that grows and shrinks with the size of your family is featured by Max A. Hartwig, of Rochester. Buyers can choose from a number of elevations, according to their needs.

The model, already built in Waverly Woods subdivision, is a two-story brick containing seven rooms, a storage room, laundry and 2 1/2 baths. The living room with dining space at one end has a cathedral ceiling.

In the kitchen there are solid birch cupboards with all movable shelves. Range, oven, disposal unit and dishwasher are built in. Window sills throughout are Formica, windows aluminum.

Heat is hot water baseboard type. The plan includes a brick fireplace. The two-car garage is attached.

This house will be custom built to the buyer's specifications on his lot. With all features described above the price is \$24,850. Finished living area is 2140 square feet. Houses are built by O'Connor Construction Company of Oak Park.

Hardwood Floors Are Allergic to Water

Hardwood floors normally should never be cleaned with water, says the Maple Flooring Manufacturers Assn. Dust clean them with a soft brush, dry mop or cloth.

If the floor is soiled or spot stained, rub it with a mop or cloth moistened slightly with penetrating sealer, turpentine or furniture polish. This treatment is especially effective on tight-grained hardwoods such as maple and birch.

Set a Day Aside to Get Caught Up on Little Jobs

You can banish that wealth of little nuisance jobs that pile up. Plan a regular mend-it day, each month. On that day, check these routine essentials.

1. Examine electric wires on lamps, appliances. If any are worn get someone qualified to replace them.

2. Check window and door hinges and locks. If they stick or don't fasten, oil or re-set them.

3. Pull out bureau, sideboard and kitchen drawers to see they work easily and noiselessly. Soaping will correct sticking or squeaking.

4. Examine and try all door knobs. If loose, tighten screws. If glass or porcelain knobs have cracks or nicks, fill in with liquid porcelain or wrap with adhesive.

5. Check all equipment with screws to make sure they are tight. For instance, some pots or pans have handles that get loose.

6. If the rugs are not wall-to-wall see they are safely moored. Tack down rugs to avoid sliding or use nonskid chemical.

7. Repair bric-a-brac, china and glass. Have a catch-all drawer reserved in the kitchen or den or workroom, where anything broken gets retired, to wait until mend-it day.

Can Texture New Paint

Now there's a new ready-mixed paint which can be textured while facing interior walls and ceilings, and can be washed with a sudsy sponge. It comes in a choice of twelve colors and white.

Glass Protects and Beautifies

Tops of polished plate glass will add years of youthful luster to the life of fine furniture, according to R. W. Anderson, plate glass sales manager of Libbey-Owens-Ford Glass Company.

A top of high quality plate glass on a desk, vanity or table will enhance the beauty of the rich wood finish. At the same time it affords lasting protection against the everyday hazards of cigarette burns, rings and stains left by drinking glasses, and accidental scratches, Mr. Anderson said.

Glass tops make housecleaning easier, doing away with the need for repeated waxing and polishing. A light rub with a cloth removes finger marks and smudges, returning the top to its original luster.

To give new beauty to badly scarred tops, Mr. Anderson suggests using a cover of Vitrolite colored glass or a plate glass mirror. "Vitrolite is available in a wide range of color tones which will blend with any room color scheme," Mr. Anderson said.

Wise Brides Start Right

It is important to a new couple that their first living situation spells "home" immediately. Learning to live together is a new experience for both bride and groom.

To give the feeling of home quickly on the return from the honeymoon, here are some suggestions for a one-room, two-or-three room apartment, or a small house.

1. Put a rug on the floor. It has many immediate values of comfort. It is kind to bare feet, it is quiet for privacy, and gives warm, important in old houses. It makes sparse furnishings seem more complete, and ties together a temporary collection of old pieces.

2. If visitors exceed chair capacity, they can sit on the floor for TV or record listening and probably will anyway. A carpet invites the informality that means home.

A rug is also an investment for the future. It can move to any other room in an expanded house, as the family grows.

3. Choose a gentle pattern or texture, best for the concentrated traffic in small apartments, and for children's rooms later. It conceals signs of activity until clean-up time comes around.

A wise bride will drop a hint about her favorite carpet design to her family planning wedding presents. There is no better use for a wedding check than a carpet or rug.

Color Is Exciting

Vibrant colors are used to complement the geometric planes and straight lines characteristic of contemporary houses. One good example uses yellow on wood panels under the windows, slate blue on the frame, and a warm tan on the exposed roof overhang.

Rough masonry panels, either painted or unfinished, provide an interesting contrast to the texture of the wood.

Wood Walls Warmer

Wood paneling will kill the chill of a cold wall. The natural insulating value of wood tends to reduce heat loss from the body to a cold surface through radiation. Wood walls in bathrooms have proved to be warmer and can be sealed against moisture by water-repellent pigmented stains.

WALNUT AND EBONY — Frank Amantea stands next to the dresser he designed and made as part of the bedroom furniture for his home. The drawer fronts are made of perfectly matched burl walnut. Imported Italian marble is used for the

top of the dresser. The matching mirror has an inlay of ebony underneath the glass. At the left is a walnut chair designed and handmade by Mr. Amantea. All the furniture he designs is classic in style.

Feature Photo

Don't Starve Appliances: Increase House Wiring

Unless something is done pretty quick your electrical home servants will die from lack of juice.

In the average home more and newer appliances have led to octopus wiring systems with countless tentacles to trip up unsuspecting souls. Each tentacle gets weaker as another one is plugged in.

In the past 10 years, Americans have doubted their electricity needs.

The truth is four out of five homes today cannot efficiently use the appliances they have. Worse still, the National Adequate Wiring Bureau says, only one in 10 homes is sufficiently wired to use new appliances a family plans or wishes to buy.

On an average in each of the 45 million wired homes in the U. S., there are 22 appliances and 11 lamps. These gadgets you've come to take for granted are sucking each other's life blood.

Some homes, in fact, may have 32 appliances in the kitchen, 20 in the dining room, 20 in the living room and 21 in the bedroom.

Because of the inadequate wiring that exists in most homes built prior to 1940, you are getting poor results from your equipment. That

is, unless you have been foresighted enough to rewire your home.

How can you make a quick check to see if your wiring is as overworked as national electrical associations report?

Your home doesn't have the voltage it needs if your small cooking or heating appliances are slow to heat, cause blackouts when connected or give poor results when instructions have been carefully followed.

Other signs are poor reception of radio or TV when other appliances are in use or motors switched on. Also, if lights dim or a blackout results when a dishwasher or clothes washer shifts to its next cycle, you need more electricity.

In motor-powered home equipment, if the motor "turns over" with difficulty you're in wire trouble.

A national check this year showed 78 to 80 per cent of America's older homes were inadequately wired. About 80 per cent of the newly-built homes had insufficient power.

The simplest answer for the future, though, is to go to your local public utility and ask for a wiring checkup for your home. After this

is done, you can ask for bids from electrical contractors to put muscle back into your house wiring.

Big Brush Gets Heavy

When painting the outside of a house, do not use a brush that is too large. Professional painters

usually use a 4-inch brush, but a 3-inch one will do for most persons. It is surprising how heavy a brush can get after you have used it for a few hours.

HE BUILDS MODELS — David L. Downer of North East boulevard builds model homes for a hobby. Interested for some years in architectural models, Mr. Downer tore down two previous ones to put all his work and materials in this ranch-type home displayed recently at the Home Show. Five thousand balsa wood "bricks," each measuring $\frac{1}{4} \times \frac{1}{4}$ inch, are in the house. The roof has

two thousand cardboard shingles. Built on a half-inch scale, the house has five rooms. Doors are mahogany stained balsa with upholstery tacks for knobs. Kitchen furniture resembles wrought iron, is made from coat hangers. Mr. Downer put about three thousand hours of work in this model. He would like to go into the designing of houses — on a larger scale.

Pontiac Press Photo

Built-in Storage Makes Best Use of Existing Space

Inexpensive built-ins make the most of existing space and add comfort and convenience to the house, suggests the Construction Research Bureau, national clearing house for building information.

In a bedroom, one wall can be converted into a storage wall containing space for hanging clothing and shelves for other articles. Sliding doors will save space.

Attic storage can be provided by installing a continuous set of drawers under each knee-wall. Several doors located in the low side walls will give access to otherwise wasted space between walls and eaves, which can be utilized for storage. For additional storage, build chests and shelves into walls, their fronts flush with the wall surface.

For a built-in wall cabinet, 30" x 42" is a handy size. Conceal kitchen

shelves with a drop-leaf front which makes a table when opened on hinges. Bottom of the cabinet should be 30" above the floor so that the front opens to standard table height. Space beneath and above sink should be used for deep built-in sliding-door cabinets.

Against a living-room wall, a long low cabinet can hold books, TV set, radio, phonograph and records, glassware and other party accessories.

To make sturdy, decorative cabinets, Georgia-Pacific Ripplewood paneling is inexpensive and easy to handle. The 4'x8' panels, $\frac{5}{16}$ " thick, simplify built-in construction and can be used for entire cabinets or cabinet doors. When painting or staining, no priming coat is necessary as the panel surface is already sealed.

In any room, attractive storage

space can be provided by building bookshelves to flank an old-style free-standing radiator. Shelves should be the same height and depth as the radiator.

For extra bathroom storage, build a cabinet under the lavatory, extending past one or both sides of the sink to make a counter-top. Built-in cabinets flanking a window, with a connecting cabinet under the window, provide space for added storage as well as a window seat.

No Moisture Here

One reason wooden sash maintains its high popularity with home builders believes Judd Greeman, president of the National Lumber Manufacturers Association, is that condensation does not collect on wood which has good natural insulating properties. This is especially important in modern homes with many appliances using large quantities of hot water which keeps moisture content of the home at high level.

Check Slab Thickness

Where a concrete floor slab directly over the ground is used as a finished floor or base for a factory basement slab can be finished floor in habitable rooms,

the minimum thickness should be four inches. This also applies to garage floors, terraces, porches, driveways and walks. A satisfactory basement slab can be three inches thick.

Part Wall Will Unite, Divide

The modern trend toward open design in home floor plans, with rooms blending together for a feeling of spaciousness, holds much appeal. But many families have reservations about the extent that the dining area and kitchen should blend.

While eating in the kitchen may be agreeable for breakfasts and other everyday meals, there is much demand for a more formal dining area for certain occasions, with a separation to block out the uninspiring sight of unwashed utensils and dishes.

The advantages of open-design spaciousness and definite separation can both be enjoyed at the same time. Such a combination results when the areas are divided by a wall that is solid but does not reach to the ceiling and extends sideways just far enough to screen the range and sink zones. The gay colors and trim look of many modern kitchens can well be left in view.

A wall that achieves the double objectives can be provided simply in plans for new construction or home improvement. It requires only a framework of 2x4s, enclosed and covered.

The divider wall may be given a wood grain decor, an appropriate dining area background, by paneling it with planks of Marlite pre-decorated hardboard. These tongue-and-groove planks go up quickly. Their baked plastic surface eliminates finishing and future waxing.

For the kitchen side, gay and colorful decoration can be provided by covering walls and cabinets with Marlite in a choice of "companion colors" styled by Raymond Loewy Associates. Redecoration woes can be forgotten, for the paneling stays fresh with occasional wiping with a damp or sudsy cloth.

While a pass-through opening between kitchen and dining area is popular with many homemakers, there are practical considerations favoring a solid divider wall. Without breaks, kitchen space can be used to the maximum with storage and appliances. And such a wall is built and finished more easily and economically.

Kitchen Ventilator Cuts Redecorating

Kitchen ventilators pay for themselves many times over in cutting down redecorating costs throughout much of the house.

Steamy, oily vapors from cooking carry vegetable oils and grease in a fine mist which often circulates through a house, condensing on walls, ceilings, curtains and upholstery. As dust settles on this film everything becomes dull.

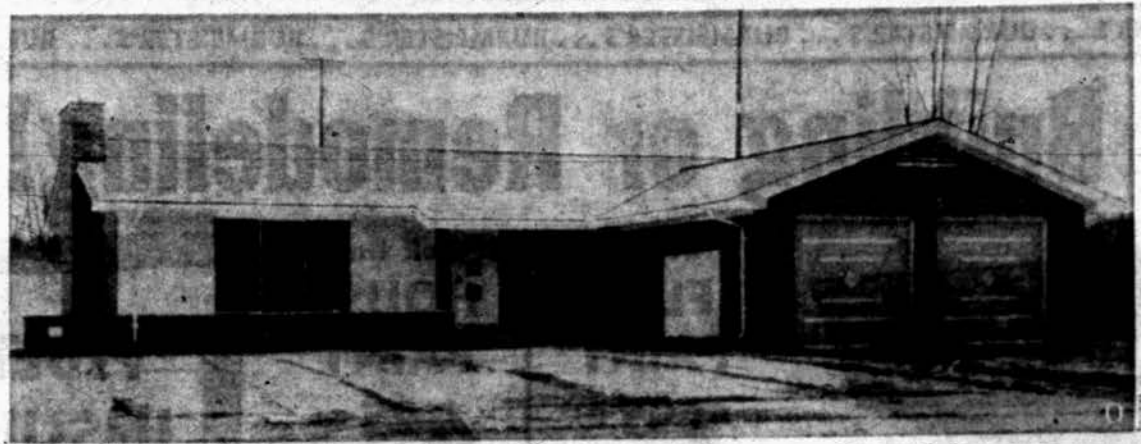

To install a blower in a kitchen window is a simple matter. The more ambitious handyman can get even better results by building a hood over the kitchen range with the blower vented to the outdoors.

Commercial Property For Sale

Marble Fits in Bathrooms

A home needs one and a half baths. One hundred three delegates to the first women's Congress on Housing agreed on this point.

The trend to more baths and larger baths has its effect, too, on what goes into the bath not only in terms of fixtures but also in terms of color scheme, utility tops, materials for easy maintenance and, generally, space.

Today's home buyer-builder demands better detailing. But what can those who built or bought their homes in the last 10 years do to add to the appearance of their residences?

In the bath, this may be solved with marble. Marble surrounding the sink will provide that extra touch of luxury so much in demand today. These tops, called vanity or pullman tops, are available in two styles, one lending itself to a modern bath, the other to the traditional bath.

INSTALL CABINETS

The trend in modern calls for enclosing the area under the sink to provide cabinets down below topped by a flat surface for cosmetics and toiletries on each side of the sink itself.

Once the cabinets are in, a rectangular sink unit with finished edges can be flanked on either side by rectangular marble slabs. The slabs rest on top of the cabinets and can be ordered cut to the proper size at the marble dealer's.

The marble edges butting the walls and the sink should be caulked carefully to prevent leakage, and the back of the slab, near the wall, should be elevated slightly lest water collect where the marble meets the wall.

Marble attains a special look when the sink and rack fittings are of solid brass.

They'll Shell Out More

American home owners will spend more on home modernization and improvement in 1957 than in 1956, the United States Savings and Loan League predicted. The League said a recent nationwide survey showed that 24 per cent of American home owners surveyed recently expected to make home improvement and maintenance expenditures of \$50 or more this year compared with 22.2 per cent last year.

Natural Preservative

Nature has built a special oily preservative into western red cedar lumber which makes this popular species highly resistant to insects

and decay. For that reason, western red cedar is used where it is exposed to weather as siding for homes, fences, garden structures, planters, wooden flower tubs and in other ways.

Don't Paint in Sunlight

Don't paint a house in direct sunlight if you can avoid it. The sun often causes paint to dry too fast and wrinkle in hot weather.

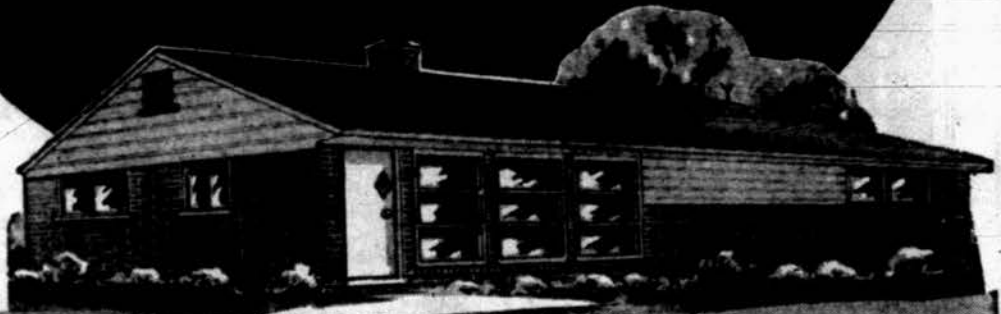

You can keep ahead of the sun by painting the west side in the morning, northern surfaces next, the east side in the afternoon and the south when the sun is lower in the sky.

Mildew Grows Inside House

Our little home problem for today concerns that musty odor that you find in many homes after a few weeks of nice humid weather. This odor, in case you didn't know, is caused usually by mildew growing here and there inside the house.

Under the right conditions, mildew can grow like mad on interior wall surfaces. It can grow on the paint or it can grow on the wallpaper. Sometimes it grows under the wallpaper and this makes it tough to detect because you won't be able to see any sign of the mildew—but you can smell it just the same.

If you are troubled with mildew inside your house there are several things you can do about it. Improving the circulation of air and taking out some trees and bushes to allow light to enter will help but this may not be too practical. The best remedy is to treat the wall surfaces so that mildew won't grow no matter what.

The old mildew should be scrubbed away with a fungicide which you can buy at hardware, drug and paint stores. Scrubbing the area with just plain water won't help—it will just distribute the mildew spores over a larger area.

After the surface has been cleaned, repaint using a paint with a mildew retardant to prevent the future growth of mildew. If you've painted over wallpaper, take off the old paper because chances are that mildew is growing under it. The same thing holds true if you've papered over old paper.

Oh, my aching back, you say after moving furniture all day. Well, Evan Frances, interior decorator, points out a shift of furniture adds new feeling and excitement to a room.

MODEL ON OGEMAW — John Kinzler Real Estate has built a model house that is designed for a 40-foot lot at 138 Ogemaw. On a larger lot the house can be spread. This three-bedroom ranch type home has a center hall and a dining cl. Constructed of face brick, the model has a

fireplace in the basement, gliderama windows and a tiled vestibule entrance. Built on your lot, the house costs \$15,900. Open house is held daily from 3-6 p. m. and on the weekends from 1-6 p. m. Spencer Floor Covering has put floor coverings and draperies in the model.

Pontiac Press Photo

Lessen Hazard of Roof Fires

Sweeping your own chimney may be farthest from your thoughts of housecleaning duties. But the National Board of Fire Underwriters suggests it is best to clean chimneys at least once a year.

Defective or overheated chimneys or flues are an important cause of fire in the home. They accumulate soot, especially if wood or soft coal is burned or if your oil burner is poorly adjusted. Also, they become overheated or cracked.

As accumulated soot is burned out, sparks may set your roof or other nearby buildings afire.

If a professional chimney sweep isn't available, clean the chimneys by mechanical methods rather than chemical.

You can do this by putting several bricks in a burlap bag, attached firmly to a strong cord. Working from the top of the chimney, move the bag up and down until soot is removed.

You'll need to use both hands for the job, so be careful. If you use an extension ladder, hook a leg around a rung so you won't fall.

Check a chimney for loose bricks and breaks, especially in an attic.

Also, the pipes leading to the chimney from your furnace or stove should be in good condition and be protected from inflammable materials by metal or asbestos sheets. Rafters and other woodwork near the heating plant should be protected by a non-combustible material such as asbestos.

Dampness Is Enemy Kitchen Lighting Goes Modern

Are you in the throes of house-painting? Maybe there are some things you'll remember to do next time to ease your work.

For beginners, remember before you paint, examine every paintable surface carefully. If the paint has peeled, probably moisture has got under the paint film. Find the moisture source and correct this condition. Sapoli Paint experts urge. Look for cracks or openings in the wood near the scaling area. If they are visible, seal them with caulking compound.

Remove all loose or scaling paint by scraping or wire brush-

ing. Should the paint surface be in extremely poor condition, burn it off down to the bare wood. The new electric paint removers are safer for this purpose than the conventional blow torch.

Mildew growth should be removed by scrubbing with a scouring-cleanser. Then rinse with an antiseptic solution of a household disinfectant and water. Dry thoroughly.

Use a dust rag and a stiff clothes brush to clean off loose dirt and foreign particles on the surface.

Paint when the day is dry and clear. Temperatures between 55 and 85 degrees are best. Try always to paint the shady sides moving to new areas as the sun moves. Never paint over a wet or damp surface.

Be sure morning dew has dried off completely. Generally allow a day or two of dry weather after a heavy rain.

Paint trim and shutters last after you have completed the rest of the house.

You should generally allow a minimum of 60 days for new cement, stucco, concrete or brick surfaces to cure before painting. The same paint used on wood can be applied to new masonry. These are oil paints and give satisfactory results.

When painting use a brush 4 inches wide with bristles of about the same length for painting large areas. Use a 2½-inch brush for trim and a sash brush for window sash. Start at the top and work down. Paint an area you can cover from one position on your ladder or scaffold, then paint the area directly below. Paint the "butt" or overhang of shingles or clapboard first, then the flat surface above.

New homes are full of wonderful lighting ideas, but it isn't always necessary to put them off until the new home comes true. Efficient lighting for kitchen working areas, for example.

Special wall outlets needn't be installed — those in place for appliances will do.

Long fluorescent tubes which spread light evenly over counter tops attach to the wall or to the underside of wood cabinets, and plug into the nearest outlet as easily as a table lamp.

An extra fluorescent illumination can serve the top of the range. A decorative shelf has a frosted glass top through which the light beams upward on apices and seasonings as well as more brightly downward, and its deep wood edge shields the tube.

The shelf must be built to fit the width of wall between cabinets, but this is a job a week-end carpenter can do.

Quality Goes Into Finish

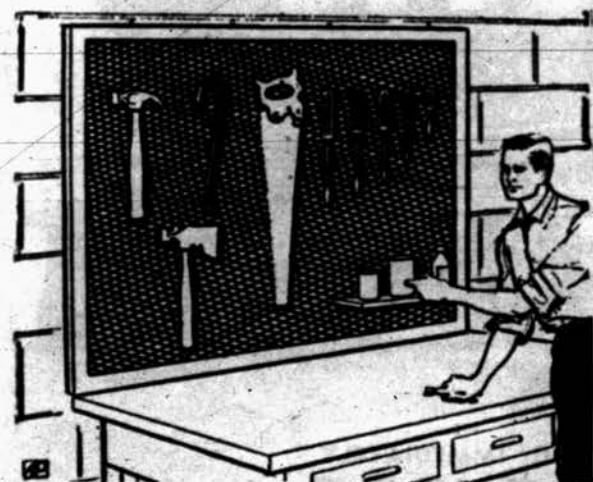

Modern furniture finishing departments maintain high standards of quality all along the line. The preparation of the wood prior to finish application, the finishing equipment, the skill of workers employed, but above all, the finish itself — are vital in producing real quality furniture.

Consider Original Shade of Wood

To take advantage of the natural color tones of wood when planning interior decoration or cabinet finishing, you have to know the various shades that are natural to each species of wood.

Twenty woods fall within the range of light to medium natural colors. They include Ponderosa pine, Southern pine, Douglas fir, Idaho pine, sugar pine, Engelmann spruce, West Coast hemlock, Sitka spruce, white ash, birch, black gum, hackberry, hickory, pecan, magnolia, soft maple, hard maple, red oak, white oak and yellow poplar.

Eleven woods run from medium to dark in tone. These are Western red cedar, Southern cypress, California redwood, larch, brown ash, butternut, cherry, chestnut, red gum, American walnut and mahogany.

WORKBENCH TOOL RACK is easy to fashion out of metal lath.

Metal Lath Opens Way for Handyman Projects

Metal lath, the same diamond mesh type that is used as a plaster base in fire-safe construction, lends itself to many handy uses around the house.

One sheet of this material, available at building supply stores, can serve for several projects. Easy to cut with tinner's snips it can be shaped by hand to serve as a smart magazine rack, or framed for a versatile and neat tool rack above the work bench.

One full sheet can be framed for a room divider, or cut to form smart panels in the doors of an open cabinet.

By sandwiching metal lath between a double frame for a tool rack, the lath is held far enough from the wall to permit the insertion of wire hooks to hold the tools. Diamond mesh lath is made of

copper-bearing alloy steel expanded and can be obtained in either galvanized or black paint finish—both of which can be painted further to suit your color preferences.

A MAGAZINE RACK made out of diamond mesh metal lath bound to wrought iron legs.

Machinery Takes Over

In past years, farm tools were usually painted by hand. This was a slow and expensive process as Japan colors or flat coats were applied first, then clear coats of varnish. Increased production has developed application practices of dipping, flow-coating and spraying at lower cost.

'Summerize' Fireplace

To banish the blackness of your fireplace and make it attractive for the summer, scrape off the soot and apply a coat or two of cement-base water paint in white, pale grey, or a more colorful tone — terra cotta, for instance.

CHECK MOTHS — That dark closet in your home can be as bright as any room in the house if it's located on an exterior wall. A panel of translucent glass block will flood the area with daylight, at the same time protecting the interior from the view of outsiders. In addition to eliminating the inconvenience of darkness, daylight will help to prevent moths. They prefer to work in the dark.

Reorganize Storage With Peg-Board Panels

In the Spring, 'tis time to rout out, clean up and reorganize the myriad of storage items ranging from toys to pots and pans, from garden tools to golf clubs.

Paper a Foil for Art, Curios

The urge to "collect things" is one human weakness you can use to advantage. Your prize possessions — be they flora, fauna or fine art — belong on your walls where they can breathe new life into your decorating scheme.

Entirely in accord with this theory are some of the leading wall-coverings manufacturers, who seem to have unlimited ideas in dramatic backgrounds for displaying the art objects, hobby collections or personal curios that almost everyone owns. No matter how unusual your collector's items, it is now possible to correlate them with a wallcovering in just the right color, texture and pattern to achieve a striking effect.

Wallcoverings patterns like brick, grasscloth, burlap and striated effects are among the most popular variations, because they provide textural interest and bright, clear color without distracting from the importance of the wall accessories themselves. A group of Japanese prints or souvenirs of a Far Eastern vacation, for example, shows off to advantage against a wall of serene, Oriental-inspired grasscloth.

If plants are your hobby, wallcoverings that capture the freshly mortared look of real brick — in white or pastel shades — are an excellent foil for wall planters or trailing ivy.

Workshop Patterns

by Ruth Wyeth Spoor

CHIPPENDALE SHELVES

Now, the home craftsman can make exact reproductions of these fine old Chinese Chippendale shelves and avoid the tedious job of tracing the design onto the wood. With this new iron-on pattern you are ready to begin sawing in a jiffy. You just lay the pattern on the wood, go over it with a warm iron, and the design is transferred to the wood in the most minute detail. A special feature of this pattern is that it may be used on both new wood and painted surfaces. An illustrated instruction sheet is included with the pattern. The price of this pattern No. 107 is 50 cents postpaid. Send order to—The Pontiac Press Pattern Dept., Bedford Hills, New York

Paint Brushes Deserve Best Possible Care

Never stand a paint brush on the tips of its bristles. This carelessness will cause the brush to take on a bend that cannot be removed. Brushes to be soaked in solvents should be suspended by the handles.

Drilling a small hole through a brush handle near the beel of the brush, makes it easy to insert a stiff wire, which running from one edge of a can to the other, will keep the brush hanging in an upright position.

Step No. 1, of course, is routing out unwanted things, which can be given to charitable institutions or sold to a junk dealer.

The second step is housecleaning. Modern appliances have lightened this chore. Step No. 3 is reorganizing your storage so that the annual throw-away exercise will be diminished.

Here, too, modern materials have come to the homemaker's rescue. Among the world's foremost "organizers" is a panel of holes, popularly known as Masonite "Peg-Board." Used with matching metal fixtures, these versatile perforated boards have virtually revolutionized the storage facilities in thousands of American homes.

Equipment previously hidden in drawers or in hard-to-reach cabinets can be brought out into the

open where it is accessible, yet out of the way. Organized storage is what many homemakers call the "Peg-Board" panels and fixtures.

Your Likes Should Be Key to Home Decoration

You don't have to be slavish about "period" in decorating your walls, reports designer Harry Layton. Surround yourself with the things you like, that fit into your life, follow a few general rules about balance, texture and color — and you're pretty much on safe ground.

Today, good taste in home decorating is accomplished mainly by giving warmth to a room, the Syracuse Ornamental designer feels, and wall decorations can play an important role in achieving such warmth.

They can bring order out of mild chaos in the home workshop, a utility room, closets, the kitchen, the den, youngster's room or recreation area.

Available at lumber yards, the painted any color, so they have a thickness being suitable for hanging such items as clothing, folding chairs, golf bags, kitchen utensils, card tables, tools and similar paraphernalia.

In the garage, where shelves of heavy paint cans, ladders, power mowers and other heavy equipment are stored, the 1/4" panels are recommended.

"Peg-Board" panels may be painted any color, so they have a high decorative value as well as a storage function. In mounting them to the wall, be sure that spacers are used on panels up to

2x3' in size, and narrow wood strips at 16-inch intervals between rows of holes for larger panels.

New Use for Old Club

Don't throw old golf clubs away. Cleaned and attached to an appropriate base, the club heads make fine book-ends. For an easy to clean, attractive finish use shellac.

Lighten Home Interior

Pastel paints in warm and cool colors of wide variety are gaining favor at a fast pace and are being used for home interiors and exteriors. The trend indicates lighter, brighter surroundings—certainly a pleasant atmosphere in which to live and work.

Your Home Air-Conditioning System Will Do a Better Job If You Help

You must learn to live with your residential air-conditioning system.

Any home air-conditioning system has limitations and any equipment will function more effectively and be better able to give out the comfort you expect of it if the family knows and follows the proper procedures.

An expert with the nation's leading manufacturer of automatic controls says that many people unjustly condemn a residential air-conditioning system because it doesn't keep the rooms as cool on hot, muggy days as they think it should.

Air must be both cool and relatively dry for comfort, points out William Nessell of Minneapolis-Honeywell Regulator Company and unfortunately, he adds the process of cooling air increases its relative humidity unless some moisture is taken from it simultaneously. This means that home air-conditioning system must remove both heat and moisture to be effective.

HAVE FAMILY HELP

This is where your family can help. If they cooperate in reducing the heat and moisture within the house, they'll be giving your air cooling system a chance to do its job more effectively.

Nessell, one of the nation's leading authorities on residential air conditioning systems, offers these suggestions:

DO use your kitchen ventilating fan when cooking on a hot day. A kitchen range with all burners operating can release more heat into the house than a two- or three-ton cooling unit can remove if it did nothing else.

DO vent automatic clothes driers to the outdoors. Many complaints of inadequate cooling have been traced to discomfort caused by the extra load placed on the air conditioning equipment by the discharge of moisture from clothes driers.

PLAN IRONING

DO confine your ironing to a cool day or late in the evening when the cooling system has reserve capacity and can remove this extra heat without noticeable difficulty.

DO clean filters periodically. Dirty ones effect the operation of equipment by reducing the amount of air that can move through the unit.

DO keep windows closed throughout the cooling season. To open them lets in warm and often high humid air, particularly at night.

DO keep Venetian blinds or draperies closed on east, south and west sides of the house when the sun is on them.

DON'T mop floors, wash furniture or perform other cleaning operations requiring water on a hot day. Moisture is released into the air as wet surfaces dry. Confine such cleaning activities to cool days or at least during the coolest part of a warm day.

DON'T open doors more often than necessary and then for as short a period as possible. It usually costs more to cool a house with children who are running inside and out at frequent intervals because each time the door is opened warm air comes in.

CHECK SHOWER CURTAIN
DON'T use a shower curtain that absorbs water. Use one of plastic or other non-absorbent material. A shower bath releases more heat and moisture than a tub bath.

DON'T expect your air conditioning system to perform miracles. Designed to keep you and your family comfortable, it shouldn't be blamed if it is not able to keep an additional 10 or 15 people comfortable at a party on a very hot day.

DON'T shut off a thermostatically controlled cooling system on a cool day. You don't gain anything thereby, for the thermostat will operate the unit only as necessary to keep you comfortable anyway and requires no help. Set the thermostat at a level agreeable to your family and leave it there.

DON'T be disappointed if the temperature gets a few degrees warmer than its thermostat level on a very hot day. Most residential cooling systems are designed for maximum cooling that will main-

tain indoor temperature 15 or 20 degrees below the normal maximum outdoor temperature and they cannot do much better than that.

Insulation Barrier Keeps Framing Dry

All insulation used in a house must have a reflective or vapor barrier facing inward to keep the framing dry and strong. Make sure that insulation thickness is sufficient for the climate where you live. All living areas should be enclosed with insulation.

Where large glass windows are used, they should have double in-

sulating glass or storm sash. Better insulation can be achieved by ventilating the crawl space under the house and unused attic areas.

Seal Wood, Then Wax

Floor wax will go farther if you first seal the wood so it won't absorb the wax. You can do this with a thinned coat of fresh, white shellac.

SAWTOOTH FENCE — Wonderful new landscaping possibilities open up if you design your fence in sawtooth pattern along the property line. Rough-textured Douglas fir or western red cedar boards give an interesting background for separate flower beds in the angle of the sawtooth. Shrubs take on new interest in this irregular pattern. These fences can be low or of estate height, and are especially good along a gully or unimproved neighboring property. Cedar or fir posts can be set in concrete to give longer service. A 2nd cap of either wood will protect the louvers.

Pattern of Growth Determines Grain

Grain in softwood boards is caused by alternate layers of spring and summer wood as a tree grows.

In the wet spring months, after a softwood tree comes out of its semi-dormant state, when the sap starts to flow freely, the Douglas fir, west coast hemlock and other softwood trees grow rapidly. The layer of wood put on during this period is porous.

During the dry summer months, when there is little moisture, tree growth slows down and the layer of wood put on is dense and relatively hard. Thus, when a round log is sawed into square boards, the saws cut across the grain, making fascinating patterns, whorls, tracings and texture.

The log can be sawn to get vertical grain boards for flooring and where wear is important, or the log can be quarter-sawn to get a modified grain or full tangential to the annual rings to get the full effect of the beauty and character of the wood.

From Drill to Router

A broken drill may readily be converted into a wood router for small jobs, according to Popular Mechanics. You simply grind the

end of the bit at right angles to its length. For the average job, a 5-16" drill is about the right size. This router bit works best when it is used in a drill press, but it also can be used in an electric drill.

Bobby Pin Will Help

There are gadgets on the market to assist you in driving brads which cannot easily be held in one hand while wielding the hammer

with the other. If you do not have one of them, try placing the brad in a bobby pin with the head down close to the pin. Held in this manner, the brad then can be driven into place.

Proper preparation of surface, use of quality materials, and skilled paint application are the ingredients of a good paint job . . . one which will provide beauty and protection to any home.

Plan Modeling in Advance

Mr. and Mrs. Homeowner are going on a multi-billion-dollar spending spree this year in remodeling.

A tremendous investment — sometimes estimated as high as \$10 billion — will go into the modernization, maintenance and repair of American castles in 1957.

However, each one of these remodeling projects, taken by itself, is not a "spree." It's a sober undertaking, and should be thoroughly planned in advance, advises the Tile Council of America Inc.

Here are some modernization tips from the trade group:

1. The kitchen should have a step-saving appliance arrangement; easily-washed walls, floor, countertops and splashbacks of ceramic tile; adequate lighting and plenty of storage space.

2. The living room may be enlarged by tearing out old-fashioned partitions without changing the distinctive style of the roof.

3. The bathroom, busiest room in the house, should be as modern as possible, with waterproof-ceramic tile walls and floor, tub-shower combination and an additional tiled shower stall.

4. The family must live in the house, so modernizing of the basement into a rumpus room should be high on the to-do list.

5. Not all living is done indoors. The beauty of any home is enhanced by a terrace surfaced in durable quarry tile so the family may eat and play together outside the house itself.

6. One of the principal reasons for remodeling an older house is to provide plenty of storage space. This applies not only to the kitchen and bathroom but also to the bedrooms. Look carefully into the cabinet and closet situation when drawing up remodeling plans.

Avoid 'Fingering' Brush

Painting with the edge of a brush will cause it to "finger" or divide into clumps. If it is necessary to use a wide brush edgewise, as in a corner, remove the fingering at once by giving the brush several strokes broadside. "Fingers" left in a brush overnight will become permanent and ruin the brush.

Pontiac Press Photo

THE MIRACLE HOME — That is the name that Multi-Lakes Realty Company has given to its newest model home in Apple Orchard Subdivision. Built on a 95x160 lot in an old apple orchard, the bi-level house contains 1,728 square feet and sells for \$17,250. Brick and redwood siding are used on the exterior. In the front the roof extends to make a covered walk. Three bedrooms, a 23-foot living room, a family room also 23 feet long, kitchen, hobby room

and utility room are included. If the size of the family demands it, one or two more bedrooms may be made from the present living room. In that case, the family room becomes the living room. Winding streets and driveways are black topped. The houses are FHA constructed by Frank Marotta of Walled Lake. Herbert Hawthorne AIA was the architect. The model is located on Pontiac Trail between Decker and Haggerty roads.

Of Course You Can Mix Concrete

If you can pour water, you can do small to medium-sized concrete jobs. With dry, premixed concrete it's just like making waffles on Sunday morning when you add milk and a couple of eggs to a batter that contains flour, shortening and other ingredients.

Sakrete mixes, for example, are made in four different types for specified jobs.

GRAVEL MIX produces strong concrete for building or repairing sidewalks, floors, footings, bases, or similar jobs.

SAND MIX is used to patch stucco and concrete, point up stone or concrete walls, as a topping and for general repair work.

MORTAR MIX is prepared for laying bricks, stone and block.

WATER-TITE is a material to stop minor leaks in basements, pools, walls, concrete tanks and vaults.

Since water is the main ingredient you supply, it should be clean and free from oil, alkali or acid. Strength, durability and watertightness of the mixture depends primarily on the amount of water used. A strong concrete needs only sufficient water — about one gallon to a 90-pound sack — to permit the mixture to be worked easily.

A workable mixture of stiff consistency is recommended for foundations, footings, walls, pavements and similar jobs. A medium mixture may be used for most other purposes.

Thoroughly mix Sakrete and water with a hoe, shovel or trowel to make sure the aggregates are covered with the cement paste for uniform strength. You can mix in a wheelbarrow, bucket or on a board. Use the mixture as soon as possible. In no case should it stand for more than 45 minutes.

When required, forms should be built from sound lumber free from knots and decay. Sheathing lumber dressed on one side and both edges is preferable for easier removal and a good finish for work above ground.

To prevent adhesion of the concrete and to facilitate removal, forms should be oiled on the face which contacts the concrete. Crank case oil or crude oil may be used. But if the finished work is to be painted, oil should not be used.

To fix cracks in sidewalks or patios, chisel sides of crack so it forms an inverted "V." With crack wider at bottom than at top, there's better adherence of new concrete to old. Clear out debris, wet sides and bottom thoroughly, then apply concrete sand mix. Smooth with trowel. Never apply new concrete to old without thoroughly wetting old surface. You would not get a bond.

Build Own Shutters With Original Design

If you like shutters on windows, it's easy to build them yourself. Measure the window as you would for screens.

Use the height and half the width for each shutter. Build frames of 1 by 2 clear pine and cover them with 3-16-inch tempered pressed wood. This panel can be glued to the frame with waterproof glue and doubly held with coated box nails four inches apart. Nail heads are set and the holes are filled with plastic wood.

Cut-out designs, a squirrel, bird, leaf or star, etc., are easily cut from patterns with a coping saw. You can make and finish a pair of shutters for less than \$9.

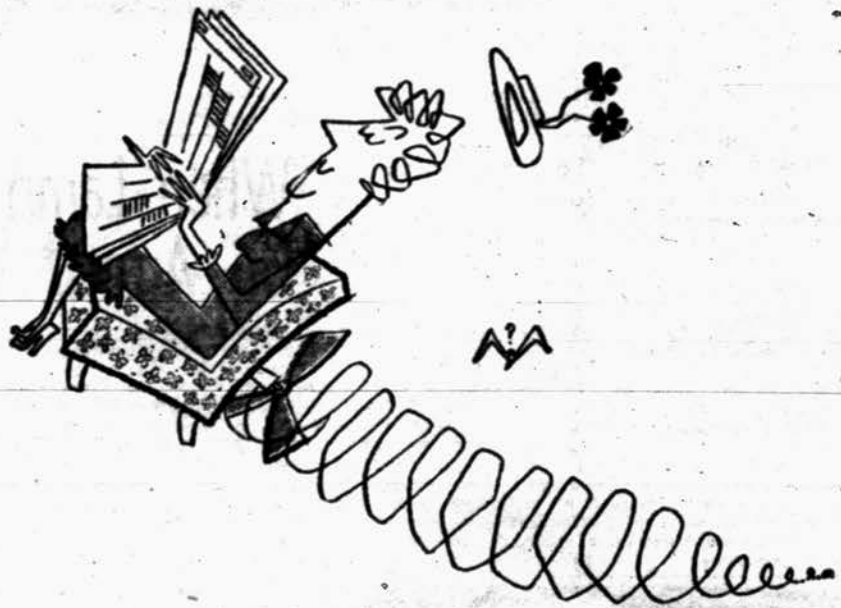

FILLING CRACKS is easy. Chisel crack to "V" for better adherence. Clear debris and wet sides and bottom thoroughly. Fill with concrete sand mix. Smooth with trowel.

CLOTHES POLE goes up simply. Two-foot hole, one foot deep with rocks at bottom. Fill with concrete mix like Sakrete. Trowel surface smooth and let harden for two days.

GUESSWORK in patching is eliminated with a dry, pre-mix. A gallon of water to a 90-pound bag, mix thoroughly. You're in business. Designed for small jobs.

She shops miles of store aisles in minutes!

Without moving out of her chair, she's shopping all over town, as you do when you read your paper. It's the advertising in it that makes this possible... and so easy.

Advertising tells you what's good about a particular product, how it will help to make your housework pleasanter, your life more exciting. You count on advertising to point out a product's washability and durability, strength or construction, how it cleans or nourishes, price and cost of operation.

When you go shopping, you know almost as much about your purchase as the man who manufactured it. Because of this modern-day convenience, advertising, you're the best prepared shopper in the world!

Advertising Benefits You!

EASY TO USE plastics give homeowner new bathroom. Gray tile trimmed in gun metal-set color.

Drab Bathroom Needs Plastics

Does your bathroom remind you of the Black Hole of Calcutta? A little ingenuity, elbow grease and plastics can bring decorative warmth to an otherwise drab bathroom.

To remodel with plastics, first clean the bathroom, cover floor and seal all wall surfaces with sizing solution. Also remember to remove towel bars and other wall attachments.

This major undertaking includes construction of the sink enclosure. To enclose the sink, white birch wood in 2" x 2" stock can be used to make a cabinet frame 5 feet long and 22 inches wide.

A counter top from 3/4" plywood will look thicker with an apron added to the edges. You can top this with a decorative laminate, St. Regis Panelite, applied with instant bond adhesives.

Remember to leave a 1/8" edge on each outside edge. Cut strips of the laminate for vertical edges and apply with same adhesive. Top is completed by filing hangover of laminate.

For best results the contact bond adhesive should be applied to each surface and allowed to dry 30 minutes before the plywood and decorative laminate are joined.

Sliding Alaynite doors on the sink cabinet may be mounted on a double track arrangement made from 3/4" quarter round strips of molding. The doors are framed in 3/4" x 3" strips of white birch. Joints are a simple miter. Entire unit can be moved in after the plastic tiles are installed around the existing sink. Shelves and compartments can then be added inside the case. Caulk edge of sink.

Plastic tile on the walls topped with super sanitas wall covering in a pattern suitable for the bathroom are final prettying touches.

Emphasize Wood Grain

One of the most popular finishes for furniture is wood stain. The grain of wood is made up of hard and soft areas. The soft portions absorb the stain more quickly than the hard ones. When the stain has set long enough to permit its working into the wood, wipe the excess off the surface. This leaves the hard areas lighter than the soft sections. In this way the grain of the wood is emphasized. Ready-made stains, easy to apply, are available at your dealer's.

More People— Fewer Houses

By STERLING F. GREEN

WASHINGTON (AP) — A home builder said recently that unless housing catches up quickly with population growth, the next decade will bring "the worst housing shortage in all our history."

In a tart speech prepared for the 45th annual meeting of the U. S. Chamber of Commerce, President George S. Goodyear of the National Assn. of Home Builders declared: "We will be the best-dressed, best-fed, healthiest and fastest-moving nation of tent-dwellers on earth."

"Of course we know we are not going to live in tents. If private industry defaults then the government will do the job."

"Then our great housing industry — the builder, the lender and the manufacturer — truly will be subsidized and socialized."

Goodyear deplored the government's tight-money policy and the "delay, disagreement and do-nothing" which he said have killed the GI housing program and depressed industries which supply materials and equipment for new dwellings.

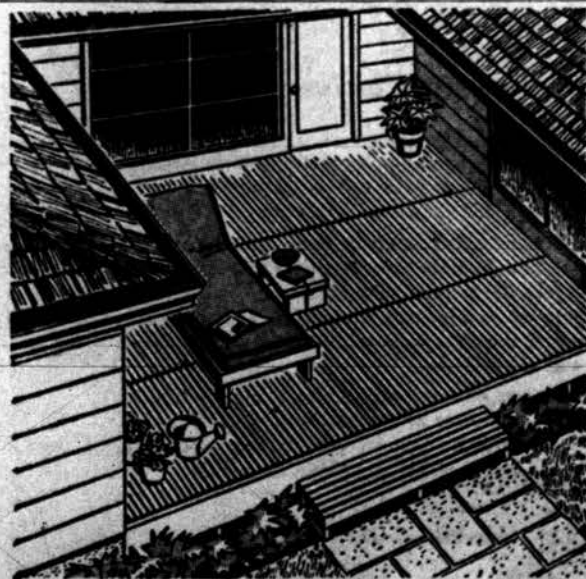

"Make no mistake about it," the Charlotte, N. C., builder said, "our population is growing faster than the vision of our leaders."

"About 1,600,000 young couples are getting married each year and we are producing fewer than 900,000 new homes to house them."

Ceramic Tile Upgrades Face of Old Fireplace

Applying ceramic tile to your fireplace-front and hearth is probably the best way to dress up and modernize its old brick or stone face. In Europe and in many fine older homes in this country, tiled fireplaces long have been popular. The fireplace is usually the center of interest in the living room; it should look the part.

Because of the increasing decorative range of fireproof ceramic tile today, the possibilities for a striking yet practical fireplace "re-do" are virtually limitless. Ceramic tile comes in a wide variety of sizes, shapes, color and textures; almost any pattern can be worked out to go with the decorative scheme of the rest of your room.

WOODEN LAWN — On rocky ground or in shady areas where lawns just refuse to grow, you can install a wooden lawn with interesting results. Made of Douglas fir 2x4s laid on edge on a good solid foundation of 2x8 or 2x10 fir joists, this wooden lawn becomes a popular patio and lounging area. Best of all, it is easy to keep clean if the 2x4s are nailed so there is a quarter inch space to permit water to run through when you hose off dirt and dust. Support posts for the joists should be set on heavy rocks or cement piers and ample space provided for water to drain away. You need not even finish the 2x4s which will weather to a natural gray and will last indefinitely.

CHARMING INFORMALITY — F. W. Raetzke of Tuxedo, out Williams Lake way, enjoys doing work around the house. All one winter was spent transforming a breezeway into a porch. Before another snowy season it will be winterized too. Mr. Raetzke constructed the red brick fireplace and installed the knotty pine

panels on the walls. The floor around the green fiber rug is rubber tile. Matchstick bamboo shades cut the glare of the sun. Furniture is bamboo with coral cushions. The door at the rear opens into the garage.

Pontiac Press Photo

That Stitch in Time Saves Houses, Too

Smart home owners know the old adage—a stitch in time saves nine—certainly applies to home maintenance and repair. The little job today, if not taken care of, becomes the major repair job in a few short years.

In every community we see older homes, some 100 years old, still well preserved and livable because they have been well cared for through the years. Out in Oregon and Washington, homes built of native Douglas fir framing and siding lumber by pioneers are still in excellent condition although in use since the 1880s and earlier.

When Lamp Shade Needs Replacing Go Armed With a Tape Measure

When lamp shades reach retirement age, the homemaker's best friend is her tape measure. Before going out to buy a new shade, take the three key dimensions of the old one—the bottom diameter, the top diameter, and the depth. Armed with this basic information, you are free to concentrate on selecting a shade that harmonizes decoratively with the lamp base and with the room scheme.

★ ★ ★

Because shades wear out more quickly than lamp bases, they require frequent replacement to keep the room looking fresh and sparkling. Crisp new shades can rejuvenate an entire decorative scheme. When the lights are on, they are the most prominent objects in the room, since the eye travels automatically to the source of light. Worn, soiled or outmoded shades cast gloom across the area.

At this time of year, many homemakers pack away their wintry shades, if they are still in good condition, and substitute light, airy materials. Often summer draperies and slip covers call for a change in shades to tie in with the new color scheme.

The importance of taking accurate measurements is emphasized by the Lamp and Shade Institute of America in a series of instructions for insuring a good fit. The depth of the shade should be measured straight down from the center of the wire, rather than along the sides, which may be curved or slanted.

For the bottom and top diameters of round shades, measure straight across the opening so that you divide the circle into two equal parts. In an oval or rectangular shade, measure both the long and the short spans. A hexagonal shade should be measured from point to point, not from panel to panel.

NOTE: FIXTURE

The next thing to do, according

to the Institute, is to note the type of fixture which attaches the shade to the lamp. Most shades for table and floor lamps are wired so that they can either be fastened to a wire harp or placed over a glass reflector bowl. These are the two most common types of lamp fixtures.

In addition, there is the clip-on shade, which snaps on to the bulb of a vanity lamp. The chimney ring shade is equipped to hold the glass chimney found in many Colonial and Provincial lamps. The uno-bridge shade is designed for lamps where the bulb hangs downward. This type of fixture is a feature of "down" bridge lamps, but is sometimes found also in small desk lamps and in twin-arm night table lamps.

The shape of the shade is easy to determine, since the names are usually self-descriptive. By far the most popular is the drum—a circular shade with straight sides and a top diameter that is only slightly smaller than the bottom diameter. There are the cone, rectangle, oval, square and hexagon. The coolie shade, which resembles a Chinese hat, slants from a narrow top opening to a broad base. The bell has flared sides, and the empire has slanted sides.

FLUFFY SHADES TOO

Although outnumbered by tailored contours, "California" skirt shades, flaring out in folds—often ruffled, collared and tied with a bow—are gaining favor among owners of Early American and Provincial lamps. They are often used to give a feminine air to vanity lamps. The fabrics, either patterned, lacy or trimmed with contrasting ruffles, are mounted on shaped bodies of translucent vinyl.

The two main categories of shades are those in which fabric is stretched over a wire frame and others, made of plastic or paper parchment, which are firm

enough not to require a frame. In the first group, a new development is a frame fashioned to conceal the wire ribs, often called "no-hug" or "shadow-free."

Both plastics and parchments are offered in solid colors and in a variety of patterns and textures. Either substance is often used as a translucent backing for other materials—provincial prints, heavily textured nubby and mesh weaves, straw, hemp or grass fibers, or wood slats.

Metallic gold glints are prominent in all shade materials this spring, reflecting the growing trend towards elegance in all phases of home decoration.

The easiest way to give a favorite old lamp an up-to-date appearance is to select a shade that is the same size as the original, but has new color and textural interest.

More difficult, but not impossible, is changing the proportions of the lamp by choosing a shade that makes it look bigger. In this case, it is best to bring the base to the store and to try on various shades. Sometimes the store will recommend adding a riser or changing the fixture to accommodate a larger shade.

Avoid Sharp Contrasts

Seeing the light on any subject will be a good deal easier if the "subject" has the right color! Above all, avoid eyestrain from sharply contrasting areas of strong colors. Softly contrasting pastel shades for floors and walls contribute to the restful yet efficient lighting of the home.

Estimates indicate that more than 6,000,000 women in the U. S. now do part or all of their own interior home painting.

Floors Regain Importance

Don't look down on your floor when you make the decorative plan for your room.

Today the floor has come into its own as a major decoration factor. If given indifferent treatment it can turn an otherwise successful scheme into one that just doesn't come off.

The area rug, for example, grows more decorative with every passing month. According to Edward Fields, rug stylist and manufacturer, the standard monochrome carpet adds little interest to a room.

"Floors," says Mr. Fields, "should command attention. The well waxed, well kept floor was the hallmark of distinction in another era with large sums of money spent for intricately laid parquet floors. These floors were constantly waxed to develop a beautiful patina.

"Then, somehow, the wall-to-wall carpet became popular and householders forgot how effective a handsome area rug on a well polished floor can be. I am happy to say that once again the smaller rug and the polished floor have come into their own."

Men are taking a whirl at rug-making, once considered a strictly feminine art. Entries received in a recent Kentucky Soft Spin rug yarn contest reveal that men and boys of all ages are turning out colorful handmade rugs. Husband-and-wife "teams," cub scouts and war veterans are finding rug-making a satisfying, and often lucrative hobby.

Unlike most hobbies, rug-making offers a wide range of techniques. You have a choice of crocheting (probably the most generally popular method), hooking, weaving, cross-stitching, braiding or tufting.

Regardless of technique, however, the success of your finished rug depends in large part on the yarn. A quality rug yarn need not be expensive.

With the new crop of 1957 carpets, it is easier than ever before to decorate a room that is very truly yours. Happily, carpet and fabric manufacturers are planning colors together, so that matching and coordination becomes a simple matter.

News lies in the use of bulkier yarns and ingenious weave techniques for a carpet with the character of treasured handicraft, but with the modest price tag that

goes with American power-loomed products.

A new idea in two-level carpet shows creative thinking. Different yarn fibers are used for the high and low, levels. For instance, one design requiring white for decorative effect confines this light shade to the lower level. The darker color on top takes the brunt of traffic. In blends, resilient wool forms the top level in one design

to give the greatest comfort underfoot. Less expensive rayon lends its color sparkle deep inside the pattern.

While wool is still the standard carpet fiber, the man-made fibers like carpet rayon, nylon and new acrilan, are excellent partners.

Capsule buying advice: The more "goods" in a carpet—in other words, the denser it is—the better it will wear over the years.

Wall Covering of Cork Tile Is Smart and New

Cork tile makes an interesting wall covering. It ties in smartly with modern interiors, providing a warm and soft background for any color. It has a certain insulating value for both heat and sound.

You can install cork tile over any smooth, firm and dry wall that is free from rust, oil or grease. It can be applied to smooth dry

plaster, gypsum wallboard, plywood or fiber hardboard.

A house holder can do the job himself with instructions available from any well stocked floor covering dealer.

Colors range from dark shades of walnut brown to light oak tans. Since the tiles are made entirely of ground, compressed and baked cork, the material is impervious to moisture. Liquids cannot cause it to warp.

This makes it a suitable material for luxury bathrooms as well as for library, den or living room.

Keep Up Repairs to Protect Investment

It costs money to keep your house in good repair. But without repair, your house loses value, both as a security and as a place to live.

There are two ways out of this dilemma: Move into a hollow tree

Don't Always Buy the Best Lumber

"When appearance is a subject of specifications in procuring lumber," says P. A. Wedding, professor of civil engineering at the University of Maryland, "the question arises as to how best to word that specification. The presence of knots gives the surface an informal appearance that is appropriate for many interior finishes."

Even though knots give you a challenge in nailing, it can be more economical to shorten lower grades of lumber to conform to nailing requirements than to buy the much more expensive clear grades.

Ask the man who has a home workshop how he upgrades his lumber. Needing miscellaneous short lengths, he cuts out the portions he wants—either clear or with desirable markings. The discarded scraps come in handy for odd repair jobs.

One handyman bought lumber for four wall-hung bookshelves for \$6.40. If he had bought a higher grade, it would have cost him \$14. He painted the shelves, anyway, and nobody can tell the difference.

trunk; or figure home upkeep as part of the cost of living.

You can accomplish this by a bank loan that can be paid off on a monthly basis without taxing you heavily.

Here are the four principal types of home improvement loans available to you.

1. Conventional Bank Installment Loan. The bank's major concern is that the improvement will substantially protect or improve the basic livability or utility of your home, and that you will receive real value for the cost incurred.

Since this loan is made by the banks on their own, and hence is not subject to the regulations of FHA Title I loans, it is generally more flexible with regard to the purpose, the amount and terms of repayment. The interest rate is usually slightly higher.

2. Title I Loan. The Title I plan permits a bank or other qualified lender to advance the money you need under an insurance arrangement with the Federal Housing Administration. The maximum amount that can be borrowed under Title I is \$3500 and the maximum repayment term is five years for loans over \$600.

The interest charge is generally \$5 discount per \$100 a year with charges deducted from the amount of the loan at the time the money is borrowed.

3. Open-End Mortgage Loan. If your mortgage contains an "open-end" provision, additional funds on the same mortgage

may be available to you for home-improvement purposes.

4. Mortgage Refinancing. If you have a conventional rather than open-end mortgage, you may be able to obtain the money you need by retiring the existing mortgage and obtaining another in a new amount. Although this ordinarily involves a new title search, recording and other extra fees, your interest rate will be lower than under Title I or other short-term loans.

Home-improvement projects can also be financed, of course, through personal loans obtained from banks, credit unions and small loan companies. However, many state laws limit the size of these loans, and repayment periods are usually shorter than for special home-improvement loans.

Specific Rules to Be Followed for Varnishing

Don't shake varnish unless you want small bubbles to form.

Don't use varnish directly from the can; estimate the amount you will need and pour it into a shallow pan or pot.

Don't warm varnish over an open flame; the best way to do it is to warm water and then place the varnish can in the water.

Don't mix varnishes of two different types or brands; while each may be good in itself, they may not blend well.

Don't varnish if there is dust on the floor or your garments or in a location where sandpapering or power sawing has just been done.

Do flow on varnish with a full brush, first across the grain, then special home-improvement loans, with the grain.

Wood Roof Gutters Are Long Lasting

Wooden roof gutters are entirely practicable and long lasting, says the government's Housing and Home Finance Agency in a booklet on roof gutters available for 10 cents from the Government Printing Office, Washington 25, D. C.

"When the White House was remodeled in 1927," the booklet recounts, "A wood gutter was removed which had been in use for 110 years. It was still sound and serviceable."

Manufacturers of wood gutters recommend that the outside of the gutter be painted with three coats of lead-in-oil paint; the inside should be left untreated, or at the most primed with oil only.

A number of inexpensive wood preservatives are on the market which will not effect the paint as creosote does.

High Pressure Selling—Beware of It!

Salesmen who use "high pressure" are usually trying to put "something over on you" — trying to make you buy something you don't want.

"High pressure" selling, especially by strangers, is always a tip-off to when you are being snared into some shady deal or fraud.

Don't let the "something for nothing" and "tomorrow-will-be-too-late" appeal get you into trouble.

Become Familiar With All Types of Wall Construction

When you buy a house, look into the walls. There are several types of wall construction and wall finishes, each with its own advantages. The homeowner should be familiar with each, it is suggested by the Construction Research Bureau, national clearing house for building information.

Plaster walls are comprised of hardening materials—lime of the slaked variety, gypsum, portland cement, perlite or other aggregate.

While in a pliable, workable state, the plaster is spread evenly over a prepared base, such as metal lath or substitutes, and allowed to harden. Two, sometimes three, coats are used. A smooth, glossy finish is obtainable, though some builders prefer a textured finish. To either, a variety of finishing and decorative materials may be added.

Though plaster does make for a smooth and readily adaptable finish, it is subject to disfiguring cracks when the house settles. These cracks are not necessarily an indication of faulty work; in the case of structural failures, they may be caused by shrinkage of lumber; inadequate or poorly located footings; neglect to supply necessary bracing in structural members.

Numerous varieties of wallboard are available for use as backing for plaster; some include such extras as insulation and soundproof-

ing. It requires the best in materials and labor, however, to prevent joints showing through the plaster job, and to avoid the general appearance of a skimpy or "thin" wall.

The joint problem also present in many of the varieties of processed wallboard made from vegetable fibres, asbestos, paper or other ingredients is overcome by "sparkling."

Production of plywood wall paneling in standard sizes has eliminated many of the objections common to other type interior walls, and resulted in labor saving which helps builders to deliver a quality house to the home-buyer without increased cost.

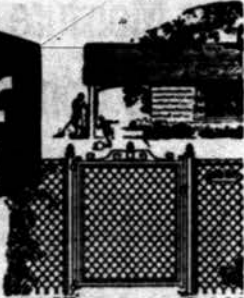

An example of this is Georgia-Pacific V-grooved hardwood pan-

eling. Completely prefinished and ready-to-install, the panel is V-grooved on the veneer joints to simulate random plankings. Edges are eased for continuous plank effect and the panels are back-sealed for stability. They are inexpensive and easy to maintain.

Decorators use this paneling to accent walls or for complete rooms. They prefer it for matching with colors, textures and furnishings. Georgia-Pacific hardwood panels come in Walnut, Cherry, Birch, Red Gum and Blond Oak.

Glass block, terra cotta block and glazed bricks are also finding favor with new homeowners for interior walls. A glass wall is excellent when it is desired to admit light to dark inside rooms.

Anchor FENCE

PROTECT CHILDREN, PETS, PROPERTY

For complete, permanent all-round protection, insist on Anchor Fence. Requires no annual painting—is zinc coated after weaving, not before. Call for free estimate.

Light Up for Safety—Check Danger Spots

Safety, like charity, begins at home, and there's no better way to improve your home's safety quotient than by checking on your lighting.

Poor lighting accounts for many of the 14,500 fatal falls each year, according to the American Home Lighting Institute, trade association of fixture makers.

Danger areas you'll want to check especially are the yard, entrances, halls, stairways, kitchens, bedrooms, and oddly enough, the bedroom. More fatal accidents occur in the bedroom than anywhere else.

Night lights are advisable in halls and stairways, although they are not a substitute for ceiling or wall fixtures. Long halls should have lights at eight-foot intervals.

Air Moisture Needs Control

Owners of most houses contend with moisture from time to time. But new houses and houses with modern appliances respond especially well to care in keeping moisture under control.

★ ★ ★
Cooking, washing and bathing all produce moisture vapor. Space heaters, refrigerators, clothes dryers and other modern appliances add to it, according to Home Facts, which gets information from U.S. builders. In new homes because of the many gallons of water that go into concrete, plaster, wallpaper paste, tile work and then some kinds of paint, moisture is high.

This water comes out by evaporation, the Home Facts Co. says. The result is so much moisture in the air that pipes and windows can appear to be leaking.

Whether your house is new or old, it is well to keep it from becoming too moist. In winter-time the vapor tries to move toward the colder, drier air outside your house. If it works through walls or ceilings, it is halted by the cold outer materials and changed back to water.

This often causes blistering of paint or rotting of wood. In summer, basements with their cool pipes can become unpleasantly damp for the same reason.

Windows in bathrooms should be opened after bathing. Those in laundry rooms should be opened while washing and drying are going on. Cellar windows should be closed during damp muggy days and opened during dry, clear weather.

Make Room Divider Out of Washable Stuff

Room dividers can pep up your decorating, as well as provide more privacy. The idea is to cover a practical room divider with ornamental material to make it a show piece.

Panel it on both sides, for instance, in washable wall canvas. That's about as sturdy a fabric as you could find, and soil and fingerprints wash right off. Good colors and fresh designs add beauty to any room.

disticks and vases gleaming with shellac. Wipe the items clean and apply a thinned coat of pure, white shellac.

SPRINGHILL RANCH HOME — This brick and siding ranch-type home is located on East Maryknoll road in Rochester's Springhill Subdivision. There are three bedrooms and two-and-a-half baths. Built on a slab, the house has a plastered two-car, attached garage. A fourth room, accessible from either kitchen or

living room, can be used as a bedroom, a dining room or an activities room. There is a natural fireplace. Landscaping is complete. With the half-acre lot the house sells for \$24,750. Hollybrook Building Company of Birmingham did the construction work. Sales are handled by Howard P. Keating.

Greeting the Mild Weather

Convert Home to Spring Through Little Touches

Time for a spring change. Change the oil in the family car, don a straw bonnet, off with snow-suits and galoshes. A home needs a change, too, and nowhere is it more welcome than in the bedroom.

Major redecorating isn't needed.

An easy and inexpensive way to achieve a fresh look is to change bedspreads and a few accessories and perhaps draperies for crisp curtains. Scatter rugs in practical winter colors can be replaced by rugs in cool pastels.

Bedspreads made with Avisco rayon fibers launder easily at low temperature in a home machine. Because the rayon tufts are free of lint, there is no worry about the machine becoming clogged.

If spreads are to be stored over the summer, they need not be ironed. Merely fold and slip into

a clear plastic bag where each spread can be readily identified in the fall.

Some homemakers like to change their lamp shades in summer. Fabric shades may be washed in lukewarm neutral detergent suds and rinsed with a spray attachment or sprayed with one of the new foam cleaners.

Another hint, waxing furniture during a major cleaning makes dusting quick and easy for months to come. Never allow a damp cloth to lay on a wood surface. Also, spilled medicine and cosmetics are less likely to stain painted shelves in the bathroom cabinet if surfaces have been waxed.

Fingerprints also are avoided by waxing surfaces such as door knobs, telephones, light fixtures. To make storage easy, it is a

good plan to put all knickknacks from one room together in a box and label "bedroom," "living room," etc. Polish silver, copper or brass. Either place in non-tarnish silver bags or wrap with clear plastic film.

Remember that varnish flows freely and best at a temperature between 70 and 90 degrees; too cold, it becomes sticky; too warm, it sets too quickly.

Check Danger Spots

When checking your house before painting it this spring, pay special attention to the "danger spots." These are the sills, thresholds, porch floors and steps, joints of porch railings and pilings, bases of pillars, edges of eaves, flashings, roofs, gutters and downspouts. Unless these surfaces are fully protected by paint against the ravages of weather, expensive repairs may soon be required.

How to Create Doorway Drama

Set designers on television like wood panel doors because they can create moods.

A colonial type panel door of ponderosa pine, plus a few early American knickknacks, creates the illusion of a fine, old colonial home.

Homeowners can add color highlights and drama inside and out by decorating panel doors of ponderosa pine. Here are some tips:

1. Painting—Outline panels in dark, shadow-line color, then paint panels and rest of door in a lighter harmonizing shade. For even more drama, paint the panels in a third accenting color.

2. Appliques and cutouts—Maps or pictures cut from travel folders

framed in door panels add charm to a den. Cartoons or sheets of music highlight a recreation room. All cutouts can be cemented to door with thinned shellac. Coat of clear lacquer makes applique permanent.

★ ★ ★

3. Decals—These are ideal for children's rooms, with cowboys and space ships for boys and dancing dolls or flowers for girls.

4. Natural wood stains—Natural wood adds warmth and richness when stained to tones ranging from blond to mahogany.

Like Upstairs Laundry

The trend today is toward an upstairs laundry adjacent to the kitchen. Such a location, however, demands more thinking as to appearance and durability. Ceramic tile now available in 200 colors, is both handsome and waterproof. It can't be damaged by steam, dyes, bleaches or any food acid.

Lay Parquet Floor With Square Blocks

Householders can now install their own polished hardwood floors over any shabby surface by using prefinished hardwood blocks laid in mastic as simply as putting down asphalt tiles.

Blocks ranging from 6 3/4 to 9 inches square are tongued and grooved for precision fitting. When laid with the grain alternated in each square, distinctive parquet patterns are obtained.

No sanding or scraping is needed. A simple waxing brings out the natural attractiveness of the wood.

These hardwood blocks are sold in bundles of 16 at well-stocked lumber dealers. They can be laid over wood floors with nails concealed in the tongue-grooves, or sealed in mastic directly over concrete.

WHAT A CHANGE — This attractive activities room was once the garage at the James Morrissey home on Lakeland avenue in Sylvan Lake City. Mr. and Mrs. Morrissey planned the remodeling. First Mr. Morrissey put in a new tiled bathroom behind the cupboards at the left. Then the carpenter came in and made the necessary structural changes. The door and window fill space

that was once the garage door. Walls are covered with prefinished limed oak paneling. The floor is covered with corkstone tile. The cabinets were designed to hold toys belonging to the two Morrissey children. In another part of the room there is a camera cupboard and a general utility and storage cupboard. Draperies are cream color with a gold thread.

Photos From Photo

Floor Coverings Vary From Room to Room

Selecting the right floor covering is extremely important to anyone about to remodel, buy or build a home.

★ ★ ★

LIVING OR DINING ROOM— You still want an elegant, beautiful floor, one that can be used with or without area rugs.

The quiet comfort of cork gives years of wear. Linoleum in tile or by-the-yard and rubber also will be good in living or dining rooms. All are easy to clean and have good resistance to indentation from furniture.

KITCHEN — The main desires here are coverings with resistance to staining, easy to maintain, long proven inlaid linoleum, such as Gold Seal inlaid, either by the yard or in handy tile form, is still the favorite kitchen floor cover-

ing. It is quiet and comfortable underfoot.

Since World War II plastic floor coverings have become very popular as they are highly resistant to staining from acids, oils, grease, solvents or soaps.

★ ★ ★

PLAYROOM OR WORK SHOP— You need a floor able to take punishment yet still look attractive after hard wear. Vinyl asbestos tile will stand up extremely well. It is easy to maintain, highly resistant to soiling even from grease and oil, and is available in bright, clear colors that won't fade.

A second choice for playrooms or workshops might be asphalt tile, but it should be avoided in areas exposed to grease or oils. Both of these materials may be used in basement areas.

BEDROOM— This room calls for quiet and warmth and you will

find cork, linoleum and rubber all good here.

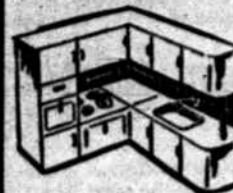

★ ★ ★

BATHROOM — You can use almost any product but because baths are usually small, one wants a luxurious looking floor. In this instance rubber tile would be an excellent choice. Easy to keep, its resistance to alkalies and soaps makes it ideal.

Prevent Greasy Walls

A kitchen wall around the range can be made impervious to grease spatters and easy to keep clean by paneling it with plastic finished hardboard. This material with a baked coating in wood grain and marble designs as well as in solid colors is available at well stocked lumber yards.

DISPLAYING HIS HANDIWORK — Frank Amantea of Oriole road is retired from the active business world but keeps busy with his hobby. Mr. Amantea is a skilled cabinet maker who loves to work in wood, especially walnut. Apprenticed to his father at an early age, he came to America at the age of seventeen. This bookcase

is made of solid walnut with the lower section of perfectly matched burl walnut. Mr. Amantea designs all the furniture he makes and creates it by hand. The tools he uses were also designed and made by him. He is the fifth generation in his family to do cabinet making.

Comes Into Its Own

West Coast hemlock, once considered a weed tree, today is one of the nation's most versatile species. Much sought after now for

pulp making, it is popular as well as a lumber source. Because of its strength it was used in aircraft building in both wars, and its long wear makes it an ideal material for flooring and exterior siding.

Remove All Dust First

Don't use wood filler unless the surface of the wood has been made absolutely dust-free, otherwise you will be rubbing the dust into the pores along with the filler.

ROCHESTER HEIGHTS — White Brothers Real Estate has two models available in Rochester Heights, a hilly subdivision northeast of the city. The models are open on Romeo road. The house at the left is ranch type with three bedrooms and one bath. The exterior is brick. A full basement and a country-style kitchen are features. It sells for \$15,450. The house on the right is a tri-level with an exterior of

brick and siding. On the upper level there are three bedrooms and a bath. The first level has the living room and the kitchen with dining area in it. An open balcony connects the two. The recreation room is on the lower level. Floors are oak throughout. The kitchen has a ventilating fan. This model sells for \$15,950. All houses in the Heights have city water and sewers. Lots are 65x125.

Pontiac Press Photo

Windows Serve Better When Treated With Care

Windows deserve the best care you can give them because they do more than almost any component of your home.

They let in light and air, keep cold, rain and snow out, and are important to the appearance of your house, inside and out.

Here are seven tips on wood window care from Ponderosa Pine Woodwork Association:

1. Handle windows carefully. Don't jar or drop them.
2. Always use handles or lift when raising or lowering windows.
3. Keep an even humidity in

your house. It's better for your health and better for your windows. In winter, use storm windows to eliminate excessive condensation on the glass.

4. Paint or varnish frame and sash of new windows before they are installed. Be sure to cover putty carefully, and overlap slightly on the glass. Don't paint the weather-stripping. Wipe off any paint that gets on this or other metal parts.

5. Keep channel and weather-stripping clean so that sash will slide freely.

6. If you ever have to install new glass, be sure the window sash is dry before applying putty, and that the putty recess is cleaned out thoroughly. Never apply putty in subfreezing temperatures.

7. When new putty is in place, overlap paint or varnish on glass to seal the putty-glass joint. Avoid cleaning the glass until putty and paint are completely dry.

Screens and storm sash will last longer and look better if given a little attention when stored, too.

Cleaning, oiling and painting once a year, according to Home Facts, a book for homeowners, can make a big difference in their condition.

Plastic Vents Prevent Peeling Paint on House

The problem of paint peeling from the siding on houses because of moisture in the walls is becoming so widespread that plastic vents have been developed to

be inserted into each space between studs to allow walls to "breathe."

These vents are tapped with a wooden mallet into 1/4-inch holes bored through the siding and openings and are comparatively inconspicuous when painted. Being plastic, they are rust-proof.

INCORPORATED

207 W. Montclair

DRESS UP garage doors with wood strips and molding. Designs may match trim or window pattern of house if the home craftsman wishes. Decorations applied with waterproof glue and 6-penny finishing nails.

Garage doors can be decorated by using 1x3-inch lumber in simulated window frames. This casts pleasing shadows on an otherwise plain door.

If the "window pane" area is painted a blue-green or blue, the illusion of windows is even more pronounced. Diamond-shaped "windows," for top or bottom or both, may be made from 1x12-inch lumber or of mitered molding frames.

Decorative effects with lumber of nominal 1-inch thickness may go on hinged, sliding or overhead doors. There usually is sufficient clearance.

A tight bond of the material to the garage door is necessary so water does not seep in behind the decorative trim. A good paint seal, especially along the upper edge of the joints, will give protection.

When brass plated hardware begins to rust there is nothing to be done about it except to remove the rust and paint the metal or replace it with solid brass that won't rust.

Bathroom Carpet Feels Wonderful

To prevent chill from bare feet on a cold floor, carpet the bathroom. The bath mat is usually on the towel rack out of reach, and a scatter rug centers on one fixture. Wall-to-wall carpet gives a real sense of luxury.

There is cotton carpeting that comes in sections, so it is easy to fit around fixtures and toss into the washing machine. There are carpets of man-made fibers like nylon, saran and acrilan that are less absorbent and thus resist splashing from sink or shower.

Carpet belongs, too, in the adjoining dressing room to lend warmth. Since it is beyond the reach of spilled water, it can be any kind of carpet for a rich feel underfoot.

Floor Varnish Protects Table

What kind of finish coat can be applied to a touch-me-not table to make it as damage resistant as possible? Use first quality floor varnish, say the experts in the furniture finish manufacturing business. Two coats work wonders on dark or medium woods.

If the top is badly damaged, the finish must first be removed with varnish remover, but if rings or marks aren't too deep, sanding

alone may be sufficient preparation.

Light-colored woods often wear heavily glazed top coats which must be removed completely. Because a tint must be used to make the top match the rest of the table again, the re-finishing of light woods should usually be done by a professional finisher, although some able amateurs can do the job.

Lacquers, too, are effective finishers, but the harder kind should be sprayed on — brush stroke overlaps may show. Be sure the floor varnish is top quality and apply it to the whole table, so legs and aprons and stretchers shrug off damage as well as the top.

Appliances Are Special

Many soaps and strong detergents are persistent enemies of ordinary appliance finishes. Special chemical coatings have been formulated to give extra-special protective finishes to washers, driers and other home laundry equipment.

To Wash Plastics:

If you are cleaning plastic that is slightly soiled, squeeze a cloth or sponge in sudsy water and wipe the plastic, being careful to overlap your strokes so that no dusty streaks remain. Rinse with clear warm water.

Legal Tricks Can Spoil Your Deal for a House

When buying or selling a house, the place to have the price understood and agreed upon is in the contract. If you try to reopen the question of price at the time for closing the deal and taking title, you may outsmart yourself.

George F. Anderson, legal expert for the National Assn. of Real Estate Boards, tells of an interesting example of a man who had made a deposit of \$2,500 and lost it by haggling price.

"A contract for the purchase of a residence at \$47,500 was duly signed," says Anderson. "The buyer took it to his attorney, who examined it and found that it was perfectly drawn."

"If I can save you \$2,500 on this deal, will you split it with me?" the lawyer asked. "The seller is, no doubt, anxious to sell, and when we meet to close the deal, I'll just tell him that unless he accepts \$45,000 for the property, we won't go through with the deal. I've tried it before and it works."

"When they met to close the deal, the attorney sprung his little surprise. The seller, however, didn't seem to get upset. He didn't rage and tear his hair. He calmly said, 'I'd like to discuss that with my attorney.'"

"The seller and his attorney stepped into another room where they could talk privately. When they came back, the attorney said, 'We're not going to reduce the price, and since you have stated that unless we do, you're not going through with the deal, it's no use to waste any more time. It's been nice meeting you all.'"

"The next day the buyer called up the seller and said he had thought the matter over and was prepared to go through with the deal. That was part of the strategy. The seller said, 'You have repudiated your contract, and a repudiation is a breach, and you

can't unbreach a breach by offering to go through with the deal.' "The buyer lost his \$2,500 earnest money and a good buy."

Just Put 'Em Up on Wall

Kitchen cabinets made of ponderosa pine are available unfinished from lumber dealers in knocked down or completely assembled forms. If you are a do-it-yourself fan, you will find that a screwdriver and hammer are all you need to put such cabinets together.

Relax With Paint Brush Easy Does It!

Grip the brush on the metal ferrule, the handle between the thumb and forefinger. Use a long steady, even stroke. Lift the brush gradually at the end of the

stroke to feather out the edge. Never ride your paint brush.

A heavy forcing stroke does not distribute paint properly and ruins the brush. Dip the brush only half the length of its bristles and tap off paint against the side of the can opposite you.

Start Painting Inside

In painting a cupboard, enamel the inside first, starting with the back, then the shelves, then the insides of the doors. After the insides and edges of the doors are dry, paint the outside surfaces.

Handy Jim's FIX-UP TIPS For the Home

Woven Fence for Carport

A carport with a woven wall makes a low-cost, interesting and mighty useful addition to any house. This is especially true if the carport has a storage area for garden tools.

Such a carport is shown in the illustration. A free plan for its construction is available.

The handsome woven wall is made by weaving strips of Masonite $\frac{1}{4}$ " siding, one foot wide and

eight feet long, between 4 by 4 inch posts set into the concrete driveway. Readily pliable for this weaving process, the Masonite siding is easy to work with, as it is splinter-free and free of defects. It takes a beautiful paint finish and will last for years.

An important feature of the garden tool storage room is the "Peg-Board" paneling on which may be suspended the various tools by means of interchangeable metal fixtures. These perforated panels, the lumber and other materials needed for this project may be obtained at lumber yards. For the free plan write to the Home Service Bureau, Suite 2037, 111 West Washington St., Chicago 2, Ill., requesting Plan No. AE-296.

Insulation Board Has Many Uses in Home

Inexpensive insulation board is a material made by exploding wood or cane fibers and then pressing these fibers into sheets. The sheets are given an unblemished surface, attractive and eye-appealing, with a high light-reflecting value. No further finish is required.

Insulation board, as its name implies, has a high heat resistance and also hushes noise. You can get it in panels, planks or tile sizes. It is especially useful for covering dirty concrete walls in basements where it is installed on furring strips. Tile sizes make attractive ceilings.

By ANDREW LANG

Is it really possible to build your own home?

We don't mean just having an architect draw up the plans, turning them over to a contractor and then sitting back and waiting for the house to be constructed.

We mean acting as your own builder, making the financial arrangements, buying the materials, hiring the labor and then doing a considerable part of the actual work yourself.

You'll probably be surprised to know... as we were... that an estimated four million persons in the United States have acted as their own builders, taking care of all the details as well as contributing varying degrees of muscle power to the projects. So there is no doubt about the answer to our question — it definitely IS possible.

But anybody who undertakes such an enterprise lightly is in for plenty of king-size headaches. It takes knowledge and a certain amount of skill and, above all, it takes staying power... from one to five years of it, depending on how much help you get from your relatives and friends, entirely aside from the professional assistance that is necessary.

In an attempt to find out more about the practicality of a step such as this, we contacted Larry Elsinger, author of "How to Build and Contract Your Own Home" and a man who should know what he's talking about, since he recently did exactly that.

Why does a person build his own home?

"For two reasons," said Elsinger. "To save money and to gain the satisfaction of completing the greatest of all do-it-yourself projects, a home for your own family."

But do you really save money?

"Definitely, but how much you save depends on how much of the labor you are able to do yourself. It is unwise to handle certain parts of the job where a high quality of skill is required not to mention that building codes require that some installations be done by licensed workers."

But there should be enough savings on labor to amount to more than \$3,000 on a \$15,000 house or about \$2,000 on a \$10,000 house. There's another angle, too. If you did not do some of the work yourself and were forced to buy the home and increase your mortgage

by either of the two amounts I mentioned, you would be paying interest on that extra money over a long period of years."

Is that why you built your own house... to save money?

Elsinger pondered that one a moment, then replied:

Procedure Given to Figure Flooring

To figure the number of feet of hardwood flooring needed for a room, the Maple Flooring Manufacturers Association recommends this procedure:

Find the number of square feet of floor space to be covered and add the following percentages depending on the face width of the flooring: For the popular standard face width of 2 1/4 inches, add 33 1/2 per cent; for 1 3/4-inch widths, add 50 per cent; for 2-inch widths, add 37 1/2 per cent.

An additional 3 to 5 per cent should be tacked on to the total to allow for customary waste in cutting and fitting.

"Partly that and partly because it presented a challenge I wanted to see if I could meet. But I wouldn't be honest if I didn't admit that, in the back of my mind all the time, there was the idea of writing a book about my experience. I made mistakes and I learned a lot, but I believe that others can profit from my first hand knowledge. It's just as much a matter of knowing what to avoid as what to do."

What is one example of what a prospective home builder should avoid?

"One of the most important things is not to build a \$2,000 house in an area where there are only \$10,000 houses. It may make your house stand out all right, but it will reduce its value considerably if and when you should ever decide to sell it."

Author-builder Elsinger had one other piece of advice for anyone contemplating a project of this nature:

"Before you do a single thing, consult your building department for local requirements. Regulations vary not only in different

states, but in different cities, towns, villages and even streets. You may discover that what your neighbor down the block was able to do, you can't."

Maps Brighten Youngster's Room

"Darkest Africa" may brighten your living room or the sub-zero Arctic may warm your youngster's room. It's all done with maps.

More than ever before maps are being used to give character, warmth and a touch of the unusual to the American home.

Not limited to the living room, maps and map accessories may add a gracious note to the bedroom, den or rumpus room, Hammond map officials add.

In many localities reproductions of old local maps are available and are natural "conversational pieces" of your region as it was in the "good old days."

Fences Serve Many Purposes

Fences, like everything else connected with the modern home, are changing styles.

Picket fences and split rail fences continue to hold their popularity, but the Western Pine Association, which comprises more than 100 saw mills and lumber producers, reports a growing trend toward board fences of various individual designs.

Woven fences, angled board screens and paneled fences are winning wide favor.

The reasons for a fence are many. It may be designed to keep out intruders, to keep children or pets in, or for backyard privacy. It can be used to add balance to the architecture of the house, such as making a tall, narrow house seem wider.

It may serve as a background for flowers or vines, or as a separation between the service area and the yard, the vegetable garden and the flower garden, or the children's play area and the rest of the grounds.

A fence also can screen your yard from objectionable views or it can serve as a windbreak.

Decide on what you want your fence to do before you decide whether to make it sturdy or light, solid or open.

Board fences appeal to men with a do-it-yourself yen. Regardless of the design, there are certain basic rules for a board fence. Sturdy posts are essential—such as 4 by 4s—and these should be spaced no more than 8 feet apart.

Post holes should not be much larger than the size of the post. Use a post hole digger, which can be rented in many cases, makes this possible. The hole should be about equal to a third of the length of the post.

Tamp 2 inches of gravel in the bottom of the hole before sinking the post and then tamp the earth firmly around the post.

Proper nailing is important. Use aluminum or other non-rusting nails. Boards 1-inch thick call for eightpenny nails and each board width of 6 inches or less calls for two nails, widths of 8 inches or more call for three nails.

Be Sure Colors in Bedroom Relax

In decorating sleeping areas it is essential to utilize color schemes that are conducive to rest and relaxation. Because the natural warmth of pine paneling makes it a favorite bedroom material, the Western Pine Association has published a color folder showing six new finishes for sleeping areas.

These new colors, named for geographical locations in the western pine region, are: Umatilla Yellow, Rouge Elk, Sunbeam Dapple, Salmon River, Fandango Flint, and Cimarron Sky.

Color photographs of sample panels prepared by a wood finishing expert are included, along with photographs of room settings and complete instructions on how to attain each finish.

The new folder will be sent free to readers upon request. Write to the Western Pine Association Yeon Building, Portland 4, Oregon. Ask for "Sleeping Area" folder.

Extra Bathroom Popular

Proof of the popularity of extra bathrooms came in a survey that showed 48 per cent of new houses constructed last year to have more than one bath. There were 20 per cent with one full and one partial bathroom, 21 per cent with two full bathrooms and 7 per cent with more than two full bathrooms.

NEW DRIVE-IN — Pontiac's newest drive-in restaurant is located on North Perry street near Madison Junior High School. Harrison's Drive-In is a brick and cement block building 35x45 feet. The eatery has steel posts and is covered with marine plywood. There is outside storage for materials used to serve

drive-in patrons. Inside, the walls are painted coral and green. In addition to the dining room and large kitchen there are rest rooms for guests and employees. Craig Stewart and Son of Pontiac did the building.

Pontiac Press Photo

Wet Sanding Removes Burns

It is surprising how few handy men understand the advantages of wet sanding. Apparently they have not watched automobile body workers develop perfect surfaces and high finishes by using soapy water in their between-coat abrasive work.

Here is how wet sanding comes in for removing a cigarette burn or small scratch on a fine table top:

If the damage is too large or too deep, the entire surface should be refinished. But for a small burn or small scratch, the area can be sanded dry with "very fine" production paper. This sanding is done very lightly, over only the area of the blemish, and is continued until the mark is removed.

The sanded area is then stained to match the original finish. When the stain is dry, a medium-heavy coat of sealer is applied. This is allowed to dry for at least 4 hours. Then the area is dry sanded again with "very fine" grade paper on a rubber sanding block to level the sealer.

You are now ready for the top coat. Since it is very difficult to blend a damaged area perfectly with the surrounding surface, it is usually best to re-coat the whole surface with varnish or lacquer. When this has dried, wet sanding begins.

Light lubricating oil is used for this process with grade "superfine" black waterproof sandpaper on a rubber block. This wet sanding will produce a perfectly level and satin-like finish.

If you want a high luster, rub the entire surface with rotten stone and oil until you get the luster you desire. The surface is then cleaned with a furniture polish and cleaner.

Try it.

Insulation Shows It Can Save Heat

A White Plains, N. Y. housewife discovered the value of thick insulation in her home the first winter washday after it was installed. Her wet laundry, left in the attic to dry, was frozen solid.

Before her home was insulated with mineral wool, heat escaping from the house through the ceiling did an efficient job of drying Mrs. Michael J. Walsh Jr.'s laundry. But a four-inch thickness of mineral wool blown into the attic floor kept the heat out of the attic, causing the washday freeze.

Mineral wool also was blown into the outside walls of the house. Since the insulation was installed, the Walsh's winter fuel bill has been reduced by half and the house is more comfortable in all seasons.

Colored Fixtures on Increase; White Goes Down

Pink and yellow bathroom fixture sales increased sharply last year, reports the Plumbing Fixture Manufacturers Association.

White bathroom fixtures continued to lose ground to color. Sales of other colors, including blue, gray, green, ivory, deep red, and tan, remained fairly stable.

Fourteen per cent more pink lavatories were sold than a year ago, says the PFMA. Pink toilet sales showed an 18 per cent increase but pink bathtub sales dropped about 10 per cent.

Yellow lavatories registered a 10

per cent sales gain. Yellow toilets and bathtubs were up four and six per cent respectively, the PFMA says.

Sales of white fixtures were down 10 per cent for lavatories, 13 per cent for toilets, and 16 per cent for bathtubs, PFMA points out.

Save Space Upstairs Too

The compactness of modern boilers for hot water or steam heat means an important savings in basement or utility room space. Modern heating saves space in living quarters, too, when bulky old-fashioned radiators are replaced by baseboard units, modern compact radiators or recessed convectors.

Removing Iron Stains Tricky

Want to know how to remove rust stains from concrete? Well first try making a paste by dissolving one part sodium citrate in six parts water and mixing this liquid with enough whiting to make a paste. Coat this over the stain and leave it there a few days. When the paste dries, add more of the liquid.

If this doesn't do the trick, and it may not if the stain is old and deep, soak the surface with a solution of one part sodium citrate crystals in six parts water. Dip a cloth in this solution and place it over the stain. Allow it to remain for about 15 minutes and then sprinkle the stain with a thin layer of hydrosulphite crystals, moistened with water.

Then cover the whole works with a paste made of whiting and water. If the first application doesn't do the trick, try another and when the stain is out, rinse the concrete surface with fresh water.

Now after you've tried this a few times, you'll probably admit that removing rust stains from concrete is a sort of involved project. You'll find that in the long run it's easier to prevent the rust from staining and this can be done by making sure that all ironwork near concrete is coated with paint.

Most rust stains are due to things like iron railings rusting at the base and the way to prevent this is to first remove all traces of the rust with steel wool and then wipe the metal down with benzene. Coat with a good metal primer such as red lead and when this is dry, apply a good grade outside metal paint.

Iron is tricky stuff to paint because any crack in the paint film will allow moisture to get at the metal and once this happens, rust will occur. It's a wise idea to check over painted iron at frequent intervals and when you find a spot where the paint is beginning to fall, touch it up before it can cause trouble.

If you don't, and if you don't like rust stains on concrete stoops and steps, better put in a good supply of the various ingredients required to remove rust stains from concrete.

Dispose of Litter Easily

Almost any hobby is likely to generate combustible litter, whether its wood shavings, paper containers, or plastic wrappings. Then, too, the hobbyist may contribute food scraps and cigarette stubs. These are some reasons why gas incinerators are increasingly popular in basements devoted largely to recreation use. They permit quick and easy disposal of all types of combustible garbage and trash.

HANDY LINEN CUPBOARD can be decorative in bedroom or hall, recessed in a wall. Cannon Homemaking Institute says this arrangement supplies adequate towel and sheet storage space for family of four.

Include Linen Closet in Remodeling Plans

With space at a premium in many smaller houses, it isn't always possible to use valuable floor footage for a linen closet.

Why not, then, take advantage of this disadvantage and make your linen cupboard a decorative feature of bedroom or hall?

This is a simple solution, easy and inexpensive to install while building or remodeling. A four-shelf double cupboard about 48 inches wide, 30 inches high, can give you adequate storage space for household linens for a family of four.

The shelves, spaced 15 inches apart, are 10 inches deep. Moreover, says The Cannon Homemaking Institute, by using standard-dimension ready-made window shutters for doors, you turn the linen closet into a highly decorative asset to your room.

Closed shutter-doors give the appearance of another window.

Incidentally, a linen cupboard recessed in a wall can prove considerably less expensive while remodeling or building than the conventional closet with standard door. It releases that extra floor space for a much-needed family storage cupboard.

With your lovely colored towels and sheets trimly piled, you'll find yourself proudly showing off your recessed linen shelves as one of the original, decorative features of your home.

If you're a homemaker who delights in the deep satisfaction of a well-stocked household linen supply for your family, you'll find your attractively stacked linen shelves a significant feature of your room's decor.

House and Site Should Blend

"Eighteenth century French and Italian homes extended their architectural lines and construction materials to outdoor living areas as we are doing today," says Robert Hale Ellis Jr., prominent western landscape architect.

"You can find the same character of design and materials in balcony balustrades, terraces and garden retaining walls as was used in these charming European interiors," Ellis points out, "and this marriage of house and grounds is the effect designers and landscape artists strive for in the contemporary residence."

Wood is extremely popular in modern home construction, Ellis states, and blends beautifully almost any homesite. Shrubs, climbing vines and plantings of almost any variety are enhanced by Douglas fir or western red cedar fences and screen sections.

The living is easier in today's homes, for families are discovering the outdoors as an added living space. Here again, Ellis asserts, where maintenance must be kept at a minimum, sun decks built of fir 2x4s, laid on their sides with spaces between, can be built on a problem lawn where the terrain slopes or grass refuses to grow. Just hose it off for a quick cleaning job.

Ellis suggests screens for dividing use sections or for separating various patio levels, built of cedar louvers or designed similarly to the home's exterior siding, these screens plot kiddies play area and entertaining spots for the grown-ups.

Wood is beautiful. Wood is utilitarian. Stained or left to weather naturally it complements other building materials and blends with growing things. Its texture is pleasing and its flexibility allows it to perform tasks no other material may accomplish.

Intercom Unit Saves Time, Steps in Home

Besides adding step-saving convenience within the home, modern intercommunication systems help guard the house against prowlers.

A special unit now is available that can be flush-mounted at the front door close to the door bell to permit the home owner to "answer" the door without opening it. It's called Teletalk and is made by the same producers of the familiar intercom systems used in offices.

Inside-the-house stations can be installed in the kitchen, master bedroom, basement or wherever convenient to enable the resident to answer the door from any place in the house.

A home owner in Van Nuys, Calif., put in an additional two-way station in his back yard so he could hear the telephone ring while he was enjoying the cool of the evening.

One night the outside unit picked up the sound of a prowler breaking into the garage which was 30 feet from the microphone and carried it into the owner's bedroom. One shout over the intercom was sufficient to rout the intruder.

Over many centuries wood and paint have been perfect companions. Eight of every 10 houses in America have been built of wood — and attractively painted to the

New Hook in Spring End

When a new hook is needed on the end of a coil spring, the simplest method is to place the spring on the corner of a vise or anvil

and use a hammer. This procedure is far easier than using a pliers.

Place the last coil of the spring over the corner and hammer it at right angles to the axis of the spring. While hammering, move the spring slightly to avoid cutting the wire on the edge of the vise jaw.—Illustration courtesy Popular Mechanics.

Home Upkeep Big Business

The nation's 50 million owners of dwelling units need to spend at least \$12 billion each year to keep their home plants in good condition. This is equal to the total amount being spent each year for one million new homes.

Fritz Burns, nationally known Los Angeles builder, warns that at least 35 million of these homes are in need of repair, and some have felt their first touch of blight. He estimates eight million homes are near-slum or actual slum dwellings.

Without constant repair and maintenance he said the nation's \$230 billion investment in homes is in jeopardy.

Most homes, being built of lumber, are easily repaired. Such popular and inexpensive softwoods as Douglas fir and west coast hemlock can be found in any retail lumber yard in the country, and there are a million carpenters who know how to use lumber for repair and remodeling.

Use Brush and Roller to Paint Ceiling Easily

In painting a ceiling you can go to town with a roller if you paint the edge first with a two-inch brush. Experts recommend rolling forward and back, overlapping the strip you have painted with a brush. Roll a second and third strip in the same way, overlapping each strip slightly.

Then to level the paint, roll across the strips. Continue over the ceiling in this manner, but be sure to do the entire ceiling at one session. This will prevent lap marks from showing.

Plan Carefree Summer Living

Plan your living room for care-free summer living as did home-makers of an earlier generation who really knew how to keep rooms cool and pretty with less work.

First, take up rugs and store them. Lay a linoleum or tile floor covering which can be waxed bright and kept bright even through damp moppings.

Whether you choose linoleum, asphalt tile, rubber tile, vinyl tile, or leave your finished wood floor bare, it can be kept bright and carefree with the new self-polishing floor wax made with vinyl. This new floor wax is the first to really combine water repellency and scuff resistance. It stays bright through spills, damp bathing suits, and quick moppings.

Take down heavy draperies and replace them with bamboo shades or plastic covered window shades that need just wiping to stay clean.

Put away pictures, too, and replace them for the summer with fun paintings your children might make with fingerpaints, or purchased unmounted poster-like amusing pictures—or even picturesque travel posters.

Put away accessories, too. Concentrate on one or two big

impressive accessories which are easy to dust.

You'll enjoy summer more if you can relax with the family knowing that your living room looks cool and inviting to anyone who may drop in. And it will look that way — with a minimum of care — if you choose to do one or more of the things suggested, plus some you may want to add to do justice to your own living room.

Wide Choice of Settings Found for Built-in Range

The home improver adding a built-in range has a wide choice of settings for it, points out the Gas Appliance Manufacturers Association. Not only are there many finishes to select from among the metal and wood cabinets most often employed for built-ins, but there are possibilities in tile, brick, natural stone and artificial stone.

Often a do-it-yourself carpenter, tile setter or mason can handle some of the preliminary work. But actual installation of the appliance should be left to a qualified utility or dealer representative, GAMA says, adding the recommendation that the expert be consulted in advance on size and other specifications.

You Can Help Plumber Remember His Tools

Plumbers are getting bored with the old saw about how they have to go back to the shop to get their tools. They contend that householders can save themselves money by telling the plumber what is wrong when you telephone him. This will help him to arrive with all the parts needed for the repair.

If there is a leak in bathroom, kitchen or laundry, is it in the water supply line or in the drain? About how big is the pipe, and is it copper tubing or galvanized iron?
